Mobile Telecommunications in a High-Speed World Mr Peter Curwen, Professor Jason Whalley, 2012-08-28 *Mobile Telecommunications in a High Speed World* tells the story of 3G and higher-speed mobile communication technologies. Over ten years have passed since the first third-generation (3G) licences were awarded following debates about the merits of auctions versus 'beauty contests' then, nothing much happened. More licences were issued, a few roll-outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide, in the range of services that can be accessed, in the range of devices that can be used to access them, in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled, largely on the Internet, but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here, Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators, as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition, and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up-to-date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. *Mobile Telecommunications in a High Speed World* will serve the needs of students, academics and those involved, or contemplating involvement, with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

Opportunistic Spectrum Sharing and White Space Access Oliver Holland, Hanna Bogucka, Arturas Medeisis, 2015-06-15 Details the paradigms of opportunistic spectrum sharing and white space access as effective means to satisfy increasing demand for high-speed wireless communication and for novel wireless communication applications. This book addresses opportunistic spectrum sharing and whitespace access, being particularly mindful of practical considerations and solutions. In Part I, spectrum sharing implementation issues are considered in terms of hardware platforms and software architectures for realization of flexible and spectrally agile transceivers. Part II addresses practical mechanisms supporting spectrum sharing, including spectrum sensing for opportunistic spectrum access, machine learning and decision making capabilities, aggregation of spectrum opportunities, and spectrally-agile radio waveforms. Part III presents the ongoing work on policy and regulation for efficient and reliable spectrum sharing, including major recent steps forward in TV White Space (TVWS) regulation and associated geolocation database approaches, policy management aspects, and novel licensing schemes supporting spectrum sharing. In Part IV, business and economic aspects of spectrum sharing are considered, including spectrum value modeling, discussion of issues around disruptive innovation that are pertinent to opportunistic spectrum sharing.

and white space access, and business benefits assessment of the novel spectrum sharing regulatory proposal Licensed Shared Access. Part V discusses deployments of opportunistic spectrum sharing and white space access solutions in practice, including work on TVWS system implementations, standardization activities, and development and testing of systems according to the standards. Discusses aspects of pioneering standards such as the IEEE 802.22 "Wi-Far" standard, the IEEE 802.11af "White-Fi" standard, the IEEE Dynamic Spectrum Access Networks Standards Committee standards, and the ETSI Reconfiguration Radio Systems standards. Investigates regulatory and regulatory-linked solutions assisting opportunistic spectrum sharing and white space access, including geo-location database approaches and licensing enhancements. Covers the pricing and value of spectrum, the economic effects and potentials of such technologies, and provides detailed business assessments of some particularly innovative regulatory proposals. The flexible and efficient use of radio frequencies is necessary to cater for the increasing data traffic demand worldwide. This book addresses this necessity through its extensive coverage of opportunistic spectrum sharing and white space access solutions. *Opportunistic Spectrum Sharing and White Space Access: The Practical Reality* is a great resource for telecommunication engineers, researchers, and students.

Response of Upper Gulf Coast Estuaries to Holocene Climate Change and Sea-level Rise John B. Anderson, Antonio B. Rodriguez, 2008-01-01 One of the main impacts of global warming is accelerated sea-level rise: Intergovernmental Panel on Climate Change predictions suggest that the rate of rise could reach as high as 5'10 mm/yr by the end of this century. While it is generally recognized that accelerated sea-level rise will severely impact low-gradient coastlines, scientists are still ill prepared to predict coastal response. A study of seven Gulf Coast estuaries (Mobile Bay and Mississippi Sound, Weeks Bay, Calcasieu Lake, Sabine Lake, Galveston Bay, Matagorda Bay, and Corpus Christi Bay) was aimed at examining their response to past changes in the rate of sea-level rise and climate. The rates of change are of the same magnitude as those predicted for this century. The estuarine response to change has been one of abrupt landward retreat and major reorganization of estuarine environments at decadal time scales. This book should be of interest to scientists and policy makers concerned with future impacts of global warming.

Technology Application in Tourism in Asia Azizul Hassan, 2022-03-02 This book very specifically focuses on technology application in tourism in Asia. The book contains twenty-seven chapters in four sections (i.e., theories, innovations, practices, and future research directions), based on the intriguing qualities and importance of technology applications in the Asian tourism business. This book, a blend of comprehensive and extensive efforts by the contributors and editor, is designed to extensively cover technology applications in tourism in Asia, including distinct topics such as mobile computing, new product designs, innovative technology usages in tourism promotion, technology-driven sustainable tourism development, location-based apps, mobility, accessibility, the post crisis situation of COVID-19, etc. This book is a significant contribution towards the very limited knowledge of technology applications in tourism, with selected examples of Asian countries. The importance of technology in Asian tourism is rapidly increasing, and has led to a rise in luxury, allowing citizens to enjoy leisure travel over both long and short distances. The rise of low-cost airlines and the region's growing, affluent middle class have changed the tourism environment dramatically. More tourists are booking their holidays online as a result of technological advancements. Online travel is the most important and well-established aspect of Asia's Internet economy. Considering the ongoing trend of technology applications in the tourism industry in Asia, more research attempts like this book need to be made aiming towards exploring diverse aspects. As tourism is an expanding area, this book can serve as a reading companion for tourism students, policy

planners and industry professionals. This book is expected to be appreciated by expatriate researchers and researchers having a keen interest in the Asian tourism industry.

Decarbonizing Asia: Innovation, Investment And Opportunities Tony A Verb,Roman Y Shemakov,Alexandra Tracy,Sandro Desideri,Eric Chong,Bill Kentrup,James Kruger,Moon K Kim,Alberto Balbo,Christine Loh,Archawat Chareonsilp,Suede Kam,Rachel Fleishman,Amarit Charoenphan,Davide A Nicolini,2022-10-25 As more than half of the planet's CO2 is emitted in Asia-Pacific, there is no way around it: the region has to become a leader in the global fight against climate change, if we are to win it. This transition also presents one of the greatest investment opportunities of the coming decades. The region is the most vulnerable to desertification, flooding, and sea level rise, but also has most of the planet's people, megacities, and renewable energy capacity. The sky is the limit.This pivotal book explores the intersection of decarbonization, innovation, and Asia-Pacific. It provides a snapshot of initiatives by industry leaders and the public sector to reduce emissions. Through detailed technological analysis, case studies, and interviews of nine key industries, the authors highlight the emerging trends and commercial opportunities. The region must bring capital, technology, and policy together if we are to reach the most important milestone of this century: net zero by 2050.

Africa's ICT Infrastructure Vivien Foster,Cecilia Briceño-Garmendia,2011-06-23 Africa's ICT Infrastructure reviews how the investment in the sector has been financed and how the structure of the market has changed since the liberalization process started. It looks at the role of both private and public institutions as sources of financing for the sector and charts the emergence of investors from developing countries in leading the expansion of the sector across the region. --

Hiking in Hong Kong Simon Whitmarsh,Andrew Mok,2022-10-15 Although Hong Kong is often thought of as intrinsically urban, just a short distance from the big cities are lush mountains and attractive and varied countryside. This guide presents the highlights of this hiking-friendly territory, detailing 21 graded day walks and four short treks: Hong Kong Trail (presented in 3 day stages), Lantau Trail (5 days), MacLehose Trail (5 days) and Wilson Trail (5 days). The day walks - of 5 to 22.5km - cover Hong Kong, Kowloon, the New Territories and the islands and range from easy hikes suitable for families to challenging ascents of Hong Kong's highest peaks. The territory's compact nature and excellent public transport infrastructure make it easy to access the routes. The guide has all you need to explore Hong Kong's excellent network of trails. Route description is accompanied by clear mapping and there are comprehensive notes - including Chinese place names - to help visitors navigate the public transport system. Alongside practicalities such as getting there, equipment and weather, information on local points of interest offers an insight into Hong Kong's rich geology, history and culture. The Hong Kong archipelago is one of surprising diversity and contrast, where high-rise modern cities are set against a backdrop of verdant green mountains, and sandy beaches lie right alongside dense jungle. There are also plenty of opportunities for wildlife-spotting and chances to experience the fascinating 'East meets West' culture. This guide is the perfect companion to discovering the fantastic walking on offer in the 'Pearl of the Orient'.

Regulation and the Performance of Communication and Information Networks Gerald R. Faulhaber,Gary Madden,Jeffrey Petchey,2012-01-01 'Due to their economic characteristics and also to their consequences on many aspects of collective life, information networks have always been at the edge of regulatory innovations and at the center of policy debates. The contributors of this volume combine long term visions of the factors determining regulatory policies with up-to-date analyses of technicalities to be dealt with, to provide the reader with an extended understanding of the issues and constraints shaping the future of digital networks.' Eric Brousseau, Université Paris-Dauphine, France and the European University Institute, Italy Digital markets worldwide are in rapid flux. The Internet and World Wide Web have traditionally evolved in a largely deregulated environment, but recently governments have shown great interest in this rapidly developing sector and are imposing regulations for a variety of reasons that are changing the shape of these industries. This book explores why the industrial organization of broadband ISPs, Internet backbone providers and content/application providers are in such turmoil. The expert contributors straddle the turbulent past of the telecoms sector and also contribute to its exciting though unpredictable future via positive

analysis of past communications policies, which is then utilized to deduce lessons to guide future policy making decisions. It is illustrated that broadband ISPs no longer simply provide a conduit for service delivery; they are also involved in producing content and transaction services themselves, in competition with content and delivery providers. The blurring of the traditional lines between these three sectors, as each enters into the others' markets, is highlighted. The conclusion is that we are witnessing the emergence of powerful, competing platforms, linked in complex ways that challenge traditional economic analyses. Exploring governance issues, regulation and investment, next-generation service markets and wireless communication, this book will prove a fascinating and illuminating read for scholars, researchers, post-graduate students and policymakers with an interest in ICT, technology and innovation, economics and industrial organization.

Advances in Computers Marvin Zelkowitz, Marvin Zelkowitz, Ph.D., MS, BS., 2003-08-19 Since 1960, *Advances in Computers* has chronicled the constantly shifting theories and methods of Information Technology which greatly shapes our lives today. This volume, the 59th in the series, presents two general themes. The first 4 papers discuss tool use in developing software - how groups work together to produce a product, and why the very industries that need them often do NOT adopt such tools. The fifth paper addresses a current hardware issue - cache coherence. As we build faster machines, a way to increase performance is to have multiple CPUs working on solving the same problem. This requires two or more CPUs to address the same memory at the same time. The cache coherence problem is how to allow both machines to access the same memory without stepping on each others toes so that memory gets lost or corrupted. In-depth surveys and tutorials on new computer technology Well-known authors and researchers in the field Broad overview of many important developments Extensive bibliographies with most chapters Four out of 5 chapters focus on software development technology and should appeal to a software development organization or a university course on software development practices
