*Plastic Cameras* Chris Gatum, 2012 In these days of high tech, high spec digital cameras even the rankest amateur can capture technically professional-looking images – but there's a growing trend of happy-go-lucky snappers who yearn for a more simplistic approach, a return to a time when photography was perhaps less predictable. Decidedly low-tech and highly idiosyncratic plastic, or 'toy' cameras such as the original 1984 Lomo Kompakt Automat (which spawned the term 'Lomography'), the Diana and the Holga, and the recently introduced Blackbird, Fly enable them to create images that – while not technically perfect – display a quirky sense of fun, spontaneity, and creative artiness. Whereas digital cameras and high spec film cameras boast the technology to eradicate undesirable optical 'faults' such as vignetting, barrel and pin-cushion distortion, converging verticals and noise, the owners of their cheaper cousins – which have only rudimentary plastic lenses – relish the manifestation of such visual aberrations in their pictures. Colors are typically richly over-saturated, exposure frequently off-kilter, focus dreamily soft. Plastic cameras lack light meters, autofocus, auto film advance, adjustable shutters and digital sensors, notoriously leak light onto the 120 or 35mm roll film they employ, and there

are some wacky versions: flamboyant wide-angle fish-eyes, stereo cameras with two lenses and two flashes, pinhole cameras that don't even possess a lens, and multi-lens cameras that create negatives combining up to nine images on a single 35mm frame.

*Multi-camera Camerawork* Peter Ward,1997 A large proportion of broadcast, satellite, cable television and corporate video programmes are produced using a multi-camera production technique which has its own distinct discipline, equipment and operational procedures compared to the single camera, single shot technique practised in film and lightweight video camera operation. A large proportion of broadcast, satellite, cable television and corporate video programmes are produced using a multi-camera production technique which has its own distinct discipline, equipment and operational procedures compared to the single camera, single shot technique practiced in film and lightweight video camera operation. Television multi-camera techniques were invented and adapted to suit virtually any programme format, from sports coverage, pop concerts, audience discussions, state occasions, game shows, opera and concerts. If you are a new, or long-established cameraman whose training was in single camera working, or a student on a media course with no access to professional broadcast multi-camera studios, *Multi-camera Camerawork* is the book for you. It is a comprehensive, step-by-step guide which will prepare you for the range of techniques you are likely to encounter in your new role as a multi-camera cameraman working for the first time in a television studio or on an outside broadcast. Peter Ward is a freelance cameraman and trainer and ex-Chairman of the Guild of Television Cameramen. He spent many years working on a variety of programmes at the BBC and was formerly Head of Cameras at Television South West. He is the author of *Basic Betacam Camerawork* (also in the Media Manual series) and *Picture Composition for Film and Television* both published by Focal Press.

*On Multi-lens Cameras in Stereophotogrammetric Mapping* Robert Zurlinden,1952 The investigation confirms the superiority of square pictures, and because 4-lens photographs have an approximately square format, it also confirms their superiority over any kind of 2-lens photographs. The 4-lens camera allows the strip width to be doubled, thereby cutting the flying time for aerial mapping about 50%. A maximum reduction of ground control is also permitted, with excellent balance between height and planimetry accuracy. Of all the multiple-lens cameras, only the 4-lens unit has potentialities, particularly in spatial traversing.

*Multi-Camera Cinematography and Production* David Landau, Bruce Finn,2023-12-28 A how-to book on the art, craft and practice of TV/video/streaming cinematography for multi-camera shooting. This book is written for anyone wanting to film, direct or produce multiple camera productions. Lighting Directors, Directors of Photography, Camera Operators as well as Directors, Producers and Production Managers will all find valuable information that will help them do their job and accomplish their goals of effectively filming with more than one camera at the same time. This book could be seen as an intermediate to advanced media production course book for colleges. It is also meant to give insight and inspiration to those starting out their professional careers in multi-camera productions. The text covers advice for producing and filming content using two or more cameras in many genres including Sitcom, Stand-up, News, Talk Show, Interview, Reality, Corporate Video and Indie Movies, with budgets both big and small, by two

award winning professional industry cinematographers/lighting directors with over 30 years of experience each.

**Self-Calibration of Multi-Camera Systems for Vehicle Surround Sensing**  
Knorr, Moritz, 2018-12-19

**Interchangeable Lenses** Kalton C. Lahue, 1975

**The Sony SLT-A77** Carol F. Roullard, Brian Matsumoto Ph.D, 2012-07-19 This book provides enthusiastic photographers with a wealth of information about the unique features of the Sony SLT-A77, an interchangeable-lens camera with an electronic viewfinder and a fixed, translucent mirror. The A77 differs from the current crop of DSLRs in its ability to use a phase detection focusing system throughout the entire picture-taking process, for both still photographs and videos. This provides an immediacy and responsiveness when using burst shots and creating HD videos that is unavailable in any other camera. In this guide, authors Carol Roullard and Brian Matsumoto teach you how to obtain exceptional photographs and videos as they cover everything from the basics of using the camera's automatic modes, to the more advanced aperture-priority, shutter-priority, program, and manual exposure modes. You'll also learn how best to take advantage of features such as the built-in dynamic range adjustment, sweep panoramic, GPS, colorization modes, facial detection and recognition, multiple shot exposures, and HD video. The authors provide you with an opportunity to improve your skills even further by discussing how third-party software and accessories can improve Sony's standard commands. You'll also learn about how the electronic viewfinder, fixed mirror, and Sony's novel shutter design improve the camera's utility for scientific photography through the microscope and telescope. Additional topics include: Advantages of the electronic viewfinder for previewing your photographs Using the accessory Sony shoe-mount flash Advantages of using the JPEG file format Advantage of having a fixed mirror and electronic first curtain shutter Settings for using the camera on a microscope and telescope Using the older Minolta Maxxum lenses

*Self-Calibration of Multi-Camera Systems* Ferid Bajramovic, 2010 Multi-camera systems play an increasingly important role in computer vision. They enable applications like 3D video reconstruction, motion capture, smart homes, wide area surveillance, etc. Most of these require or benefit from a calibration of the multi-camera system. This book presents a novel approach for automatically estimating that calibration. In contrast to established methods, it neither requires a calibration object nor any user interaction. From a theoretical point of view, this book also presents and solves the novel graph theoretical problem of finding shortest triangle paths.

*Multi-Camera Networks* Hamid Aghajan, Andrea Cavallaro, 2009-04-25 The first book, by the leading experts, on this rapidly developing field with applications to security, smart homes, multimedia, and environmental monitoring Comprehensive coverage of fundamentals, algorithms, design methodologies, system implementation issues, architectures, and applications

Presents in detail the latest developments in multi-camera calibration, active and heterogeneous camera networks, multi-camera object and event detection, tracking, coding, smart camera architecture and middleware. This book is the definitive reference in multi-camera networks. It gives clear guidance on the conceptual and implementation issues involved in the design and operation of multi-camera networks, as well as presenting the state-of-the-art in hardware, algorithms and system development. The book is broad in scope, covering smart camera architectures, embedded processing, sensor fusion and middleware, calibration and topology, network-based detection and tracking, and applications in distributed and collaborative methods in camera networks. This book will be an ideal reference for university researchers, R&D engineers, computer engineers, and graduate students working in signal and video processing, computer vision, and sensor networks. Hamid Aghajan is a Professor of Electrical Engineering (consulting) at Stanford University. His research is on multi-camera networks for smart environments with application to smart homes, assisted living and well being, meeting rooms, and avatar-based communication and social interactions. He is Editor-in-Chief of Journal of Ambient Intelligence and Smart Environments, and was general chair of ACM/IEEE ICDCS 2008. Andrea Cavallaro is Reader (Associate Professor) at Queen Mary, University of London (QMUL). His research is on target tracking and audiovisual content analysis for advanced surveillance and multi-sensor systems. He serves as Associate Editor of the IEEE Signal Processing Magazine and the IEEE Trans. on Multimedia, and has been general chair of IEEE AVSS 2007, ACM/IEEE ICDCS 2009 and BMVC 2009. The first book, by the leading experts, on this rapidly developing field with applications to security, smart homes, multimedia, and environmental monitoring. Comprehensive coverage of fundamentals, algorithms, design methodologies, system implementation issues, architectures, and applications. Presents in detail the latest developments in multi-camera calibration, active and heterogeneous camera networks, multi-camera object and event detection, tracking, coding, smart camera architecture and middleware.

Video Camera Techniques Gerald Millerson, 1994-08-29 Video Camera Techniques is an ideal starter guide for anyone owning a camcorder, newcomers to the field of broadcast or corporate video-making, or students who all wish to make videos to professional standards.
