Multiplication Tables and Flashcards Jack Goldstein,2013-04-25 Despite living in the age of calculators, smartphones and computers, it is still important for children to learn basic mental arithmetic. Teachers across the world still stress the importance of learning multiplication tables (sometimes called times tables). This eBook has three sections. The first contains a simple number grid for reference. The second contains each multiplication table between two and twelve - children will learn these by reading and repeating them. The third section contains 'flashcards' - each page asks a multiplication question between  $1 \times 1$  and  $12 \times 12$ ; turn over the page to reveal the answer. Note that in the flashcard section, this is split further into easy (between one and four), medium (five to eight) and hard (nine to twelve) - meaning that children do not have to have learned all their tables before taking the fun test. Containing everything a parent or teacher will need to get their children learning the most important mental arithmetic, this book is essential for your child's development.

**Times Tables Book** Nishi Singh,2016-02-07 This little book has times tables from 1 to 20 with 12 rows of multiplication. That is all children should ideally learn! This book is suitable for children from the ages of pre-school and upwards. They can memorize the tables then test it afterwards. There is no magic formula for learning the times tables, they must do it the hard way which is to memorize them by heart. It will take months so there is no need for parents to get upset and panic if they aren't able to memorize it in an instance. Remember each child is different. Just ask your child to memorize these times tables one by one.

The Best Way to Learn Multiplication Tables Oksana Siniukov,Maryna Kuznetsova,Math Country,2020-04-09 The Math Country team is made up of practicing mathematics teachers with a combined teaching experience of more than 35 years, who are also authors of unique methods of intensive children's education. In any beginner math course a big chunk of time is spent on learning the multiplication table. It's not a secret that just memorizing tables isn't fun for kids. It's proportionate how much work has to be put in to somehow convince the kid that learning this table will in fact be useful later in life. The multiplication table isn't easy for kids to remember, so a big part of this training regime is spent on making it easier for kids to memorize it. It is critical that the child experiences the joy of figuring out ideas on their own, that they form self-esteem and trust in their own abilities, and also the curiosity to learn. These are the defining factors when it comes to accessing the overall intellectual development of a child. The material is recommended for self-training of grade 2-3 classes. The contents naturally join into the material kids of that age are learning in school about multiplication tables. Our material fits into any education program. The system of additional exercises leads to development of mental abilities such as: memory, attention, imagination, logical and spatial thinking, and artistic abilities. Instead of tedious repetitive memorization, the child will understand and easily remember the multiplication material. Exercises that are interesting allow those learning to quicker acquire the material and appreciate math for what it is, not just tedious repetitive memorization.

*Teach Your Child the Multiplication Tables, Fast, Fun and Easy* Eugenia Francis,2013-06-05 Teach Your Child the Multiplication Tables - 2nd Edition Like most third graders, my son found learning the multiplication tables through rote memorization a challenge. After an afternoon of tiresome drills, I knew there had to be a better way! I drew a grid for tables 1-10. Not surprisingly, Scott knew tables 1, 2, 5 and 10, the tables with easy patterns. Well, then, why not find patterns for the rest of the tables? Tables for EVEN numbers 2, 4, 6 and 8, we discovered, end in some combination of 2-4-6-8-0 and are easy to learn. Tables for ODD numbers, we found, also have distinct patterns. Patterns made Scott smile. He could see the underlying structure and knew he got it right. The traditional method of learning one math fact at a time, such as  $8 \times 6 = ?$ , is not only difficult but highly inefficient. Rote memorization is passive and mechanical. Students typically find it boring. Why not learn one pattern for the entire table? Discovering patterns is active, creative and engaging. The essence of mathematics is patterns. Learning to recognize patterns at an early age develops analytical skills. Patterns greatly benefit children with special needs, such as those with ADD/ADHD, autism and dyslexia. They can better recall and visualize the table when they see a pattern. This is true for all children. Patterns aid recall. My workbook utilizes both left and right-brain strategies to teach multiplication. There are marked differences between children who are left-hemisphere dominant and those who are right dominant. Whereas the left-hemisphere dominant child can construct the whole from the parts, the right dominant prefers the big picture, seeing patterns and making connections. Special needs children are often right-brain dominant. Learning the multiplication tables is much easier when both hemispheres are engaged. It is the responsibility of parents and teachers to ensure children learn the multiplication tables. Without them a child will not progress beyond third grade math. Fractions, decimals, percentages and algebra will be beyond a child's reach. In California, the number one reason students do not graduate from high school is failure to pass algebra. A leading cause is: failure to master the times tables! It is a national disgrace that fifteen-year olds in the U.S. rank near the bottom of industrialized nations in math skills. We must reverse this alarming trend. The time to intervene is in the third grade. Teachers, why not a more effective approach to the multiplication tables than the drill and kill of rote memorization? Why not bring the magic of math into the classroom? If all third graders were to genuinely like math, they would be more likely to succeed in school. Parents too must do their part. Parents have a huge influence over a third grader. By high school it may be too late. Mastery of the multiplication tables is essential to your child's future. The goal of this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math. **Brilliant Ideas for Times Tables Practice** Molly Potter,2013-01-02 Learning tables is ultimately about learning by rote - which of course some pupils take to better than others. Some will practise tirelessly at home and learn them successfully but for those that for one reason or another fail to manage this, some effective classroom input is crucial.
