Multiplication Tables and Flashcards Jack Goldstein, 2013-04-25 Despite living in the age of calculators, smartphones and computers, it is still important for children to learn basic mental arithmetic. Teachers across the world still stress the importance of learning multiplication tables (sometimes called times tables). This eBook has three sections. The first contains a simple number grid for reference. The second contains each multiplication table between two and twelve - children will learn these by reading and repeating them. The third section contains 'flashcards' - each page asks a multiplication question between 1×1 and 12×12 ; turn over the page to reveal the answer. Note that in the flashcard section, this is split further into easy (between one and four), medium (five to eight) and hard (nine to twelve) - meaning that children do not have to have learned all their tables before taking the fun test. Containing everything a parent or teacher will need to get their children learning the most important mental arithmetic, this book is essential for your child's development.

Times Tables Book Nishi Singh, 2016-02-07 This little book has times tables from 1 to 20 with 12 rows of multiplication. That is all children should ideally learn! This book is suitable for children from the ages of pre-school and upwards. They can memorize the tables then test it afterwards. There is no magic formula for learning the times tables, they must do it the hard way

which is to memorize them by heart. It will take months so there is no need for parents to get upset and panic if they aren't able to memorize it in an instance. Remember each child is different. Just ask your child to memorize these times tables one by one.

Teach Your Child the Multiplication Tables, Fast, Fun and Easy Eugenia Francis, 2013-06-05
Teach Your Child the Multiplication Tables - 2nd Edition Like most third graders, my son found learning the multiplication tables through rote memorization a challenge. After an afternoon of tiresome drills, I knew there had to be a better way! I drew a grid for tables 1-10. Not surprisingly, Scott knew tables 1, 2, 5 and 10, the tables with easy patterns. Well, then, why not find patterns for the rest of the tables? Tables for EVEN numbers 2, 4, 6 and 8, we discovered, end in some combination of 2-4-6-8-0 and are easy to learn. Tables for ODD numbers, we found, also have distinct patterns. Patterns made Scott smile. He could see the underlying structure and knew he got it right. The traditional method of learning one math fact at a time, such as $8 \times 6 = ?$, is not only difficult but highly inefficient. Rote memorization is passive and mechanical. Students typically find it boring. Why not learn one pattern for the entire table? Discovering patterns

is active, creative and engaging. The essence of mathematics is patterns. Learning to recognize patterns at an early age develops analytical skills. Patterns greatly benefit children with special needs, such as those with ADD/ADHD, autism and dyslexia. They can better recall and visualize the table when they see a pattern. This is true for all children. Patterns aid recall. My workbook utilizes both left and right-brain strategies to teach multiplication. There are marked differences between children who are left-hemisphere dominant and those who are right dominant. Whereas the left-hemisphere dominant child can construct the whole from the parts, the right dominant prefers the big picture, seeing patterns and making connections. Special needs children are often right-brain dominant. Learning the multiplication tables is much easier when both hemispheres are engaged. It is the responsibility of parents and teachers to ensure children learn the multiplication tables. Without them a child will not progress beyond third grade math. Fractions, decimals, percentages and algebra will be beyond a child's reach. In California, the number one reason students do not graduate from high school is failure to pass algebra. A leading cause is: failure to master the times tables! It is a national disgrace that fifteen-year olds in the U.S. rank near the bottom of industrialized nations in math skills. We must reverse this alarming trend. The time to intervene is in the third grade. Teachers, why not a more effective approach to the multiplication tables than the drill and kill of rote memorization? Why not bring

the magic of math into the classroom? If all third graders were to genuinely like math, they would be more likely to succeed in school. Parents too must do their part. Parents have a huge influence over a third grader. By high school it may be too late. Mastery of the multiplication tables is essential to your child's future. The goal of this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math. Teach Your Child the Multiplication Tables, Fast, Fun and Easy -- Teacher's Edition Eugenia Francis, 2013-08-22 Teach Your Child the Multiplication Tables - Teacher's 2nd Edition Both the Student and Teacher's editions include the TeaChildMath(tm) teaching methodology. The ONLY difference between these editions is: an Answer Key with pages reduced to 1/4 size can be found at the back of the Teacher's edition. The Best Way to Learn Multiplication Tables

Oksana Siniukov, Maryna Kuznetsova, Math Country, 2020-04-09 The Math Country team is made up of practicing mathematics teachers with a combined teaching experience of more than 35 years, who are also authors of unique methods of intensive children's education. In any beginner math course a big chunk of time is spent on learning the multiplication table. It's not a secret that just memorizing tables isn't fun for kids. It's proportionate how much work has to be put in to somehow convince the kid that learning this table will in fact be useful later in life. The multiplication table isn't easy for kids to remember, so a big part of this training regime is spent on making it easier for kids to memorize it. It is critical that the child experiences the

joy of figuring out ideas on their own, that they form self-esteem and trust in their own abilities, and also the curiosity to learn. These are the defining factors when it comes to accessing the overall intellectual development of a child. The material is recommended for self-training of grade 2-3 classes. The contents naturally join into the material kids of that age are learning in school about multiplication tables. Our material fits into any education program. The system of additional exercises leads to development of mental abilities such as: memory, attention, imagination, logical and spatial thinking, and artistic abilities. Instead of tedious repetitive memorization, the child will understand and easily remember the multiplication material. Exercises that are interesting allow those learning to quicker acquire the material and appreciate math for what it is, not just tedious repetitive memorization.

Know Your Times Tables! Andrew

Ashcroft, 2017-11-19 This is a simple book of lists for a child to train with. There are no distracting pictures or complicated puzzles. It is intended to complement teaching which should begin at a concrete level so that the child understands what multiplication is about and for. A thorough knowledge of multiplication tables makes it easier for a child to understand later Mathematics where this knowledge is intrinsic to success. From working with multiplication, teaching in school often moves to division, fractions, area, volume and equations amongst other concepts. Children can feel very stressed if they are not equipped with a sound knowledge of the multiplication tables. This book gives a structure to learning. Many children have enjoyed the rhymes and rhythms of verses, poems and songs learned earlier on and being able to recite multiplication tables builds partly on these experiences. Mathematics should be multi-sensory. Seeing and reciting aloud are two of these elements. Discussion is important too. One can also look at the number-patterns in the lists or ask questions about them. Have little quizzes or ask questions in an everyday context, e.g. 'How many days are there in five weeks?' (7×5) 'How many shoes are there if I own four pairs?' (2×4) It is not a book to write in. From the 'two times table' to the 'ten times table' there are two versions of each table. First, the complete table with both factors and the product. Second, the table without the product so that the child can read the table

aloud and supply the product. With the edge of a sheet of paper, one can also cover over the products in the first list and lift the paper to check. Knowing multiplication tables is great for a child's self-esteem. However, children need adults. The best way to learn is little and often, one table at a time, for a few minutes each day with the guidance of a patient and loving adult. The intention of this book is to give structure to this learning which is a great gift and a key to success in Mathematics. ANDREW ASHCROFT is an experienced teacher of Mathematics and knows that children aged 7 - 10 who succeed in learning multiplication facts feel more confident later with new concepts that are based on multiplication. He has also helped teenagers who struggle with Mathematics and saw how damaging it was to their success and self-esteem that they had not learned multiplication tables and were struggling with new concepts that required this understanding. This book is for parents interested in helping their children and teachers who want a clear uncluttered list for their pupils to practice with.
