*Modern Music-Inspired Optimization Algorithms for Electric Power Systems*

Mohammad Kiani-Moghaddam, Mojtaba Shivaie, Philip D. Weinsier, 2019-05-21 In today's world, with an increase in the breadth and scope of real-world engineering optimization problems as well as with the advent of big data, improving the performance and efficiency of algorithms for solving such problems has become an indispensable need for specialists and researchers. In contrast to conventional books in the field that employ traditional single-stage computational, single-dimensional, and single-homogeneous optimization algorithms, this book addresses multiple newfound architectures for meta-heuristic music-inspired optimization algorithms. These proposed algorithms, with multi-stage computational, multi-dimensional, and multi-inhomogeneous structures, bring about a new direction in the architecture of meta-heuristic algorithms for solving complicated, real-world, large-scale, non-convex, non-smooth engineering optimization problems having a non-linear, mixed-integer nature with big data. The architectures of these new algorithms may also be appropriate for finding an optimal solution or a Pareto-optimal solution set with higher accuracy and speed in comparison to other optimization algorithms, when feasible regions of the solution space and/or dimensions of the optimization problem increase. This book, unlike conventional books on power systems problems that only consider simple and impractical models, deals with complicated, techno-economic, real-world, large-scale models of

power systems operation and planning. Innovative applicable ideas in these models make this book a precious resource for specialists and researchers with a background in power systems operation and planning. Provides an understanding of the optimization problems and algorithms, particularly meta-heuristic optimization algorithms, found in fields such as engineering, economics, management, and operations research; Enhances existing architectures and develops innovative architectures for meta-heuristic music-inspired optimization algorithms in order to deal with complicated, real-world, large-scale, non-convex, non-smooth engineering optimization problems having a non-linear, mixed-integer nature with big data; Addresses innovative multi-level, techno-economic, real-world, large-scale, computational-logical frameworks for power systems operation and planning, and illustrates practical training on implementation of the frameworks using the meta-heuristic music-inspired optimization algorithms.

*The Topos of Music II: Performance* Guerino Mazzola, 2018-03-28 This is the second volume of the second edition of the now classic book "The Topos of Music". The author explains his theory of musical performance, developed in the language of differential geometry, introducing performance vector fields that generalize tempo and intonation. The author also shows how Rubato, a software platform for composition, analysis, and performance, allows an experimental evaluation of principles of expressive performance theories.

Human Aspects of IT for the Aged Population. Aging, Design and User Experience Jia Zhou,Gavriel Salvendy,2017-06-28 The two-volume set LNCS 10297 + 10298 constitutes the refereed proceedings of the Third International Conference on Human Aspects of IT for the Aged Population, ITAP 2017, held as part of HCI International 2017 in Vancouver, BC, Canada. HCII 2017 received a

total of 4340 submissions, of which 1228 papers were accepted for publication after a careful reviewing process. The 83 papers presented in the two volumes of ITAP 2017 were organized in topical sections as follows: Part I: aging and technology acceptance; user-centred design for the elderly; product design for the elderly; aging and user experience; digital literacy and training. Part II: mobile and wearable interaction for the elderly; aging and social media; silver and intergenerational gaming; health care and assistive technologies and services for the elderly; aging and learning, working and leisure.

**Streaming Music, Streaming Capital** Eric Drott, 2023-12-29 In *Streaming Music, Streaming Capital*, Eric Drott analyzes the political economy of online music streaming platforms. Attentive to the way streaming has reordered the production, circulation, and consumption of music, Drott examines key features of this new musical economy, including the roles played by data collection, playlisting, new methods of copyright enforcement, and the calculation of listening metrics. Yet because streaming underscores how uneasily music sits within existing regimes of private property, its rise calls for a broader reconsideration of music's complex and contradictory relation to capitalism. Drott's analysis is not simply a matter of how music is formatted in line with dominant measures of economic value; equally

important is how music eludes such measures, a situation that threatens to reduce music to a cheap, abundant resource. By interrogating the tensions between streaming's benefits and pitfalls, Drott sheds light on music's situation within digital capitalism, from growing concentrations of monopoly power and music's use in corporate surveillance to issues of musical value, labor, and artist pay.

*Inventors and Inventions* Doris Simonis, 2007-09 From air conditioners to MRI scanners and from bicycles to frozen foods, modern life would be unimaginable without the work of inventors. Unlike other resources on inventions, *Inventors and Inventions* surprises readers with its wide-ranging exploration of inventors of the past and present, including the creators of Kevlar, Coca Cola, eBay, and the Global Positioning System.

*Computational Linguistics and Intelligent Text Processing* Alexander Gelbukh, 2012-02-24 This two-volume set, consisting of LNCS 7181 and LNCS 7182, constitutes the thoroughly refereed proceedings of the 13th International Conference on Computer Linguistics and Intelligent Processing, held in New Delhi, India, in March 2012. The total of 92 full papers were carefully reviewed and selected for inclusion in the proceedings. The contents have been ordered according to the following topical sections: NLP system architecture; lexical resources; morphology and syntax; word sense disambiguation and named entity recognition; semantics and discourse; sentiment analysis, opinion mining, and emotions; natural language

generation; machine translation and multilingualism; text categorization and clustering; information extraction and text mining; information retrieval and question answering; document summarization; and applications.

Popular Music, Technology, and the Changing Media Ecosystem Tamas Tofalvy, Emília Barna, 2020-05-02 This book explores the relationships between popular music, technology, and the changing media ecosystem. More precisely, it looks at infrastructures and practices of music making and consuming primarily in the post-Napster era of digitization – with some chapters looking back on the technological precursors to digital culture – marked by the emergence of digital tools and platforms such as YouTube or Spotify. The first section provides a critical overview of theories addressing popular music and digital technology, while the second section offers an analysis of the relationship between musical cultures, taste, constructions of authenticity, and technology. The third section offers case studies on the materialities of music consumption from outside the western core of popular

music production. The final section reflects on music scenes and the uses and discourses of social media.

**Advanced Information Networking and Applications** Leonard Barolli, Makoto Takizawa, Fatos Xhafa, Tomoya Enokido, 2019-03-14 The aim of the book is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications. Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform, networking structure and interface that enable novel, low cost and high volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This book covers the theory, design and applications of computer networks, distributed computing and information systems.

*Digital Storage in Consumer Electronics* Thomas M. Coughlin, 2017-12-09 This book provides an introduction to digital storage for consumer electronics. It discusses the various types of digital storage, including emerging non-volatile solid-state storage technologies and their advantages and disadvantages. It discusses the best practices for selecting, integrating, and using storage devices for various applications. It explores the networking of devices into an overall organization that results in always-available home storage combined with digital storage in the cloud to create an infrastructure to support emerging consumer applications and the Internet of Things. It also looks at the role of digital storage devices in creating security and privacy in consumer products.

**Victorian Parlour Games** Thomas W. Cushing, 2023-11-07 Have a seat in the parlour and spend a rollicking evening with this elegant box of 50 Victorian-era entertainments. Deal yourself in for a good time as you choose from a selection of games enjoyed in many a Victorian parlour. The box comes with rules to fifty games that can be played without any extra frippery, except perhaps a deck of cards if you fancy a game of Whist. Each game is good for two or more players, with most designed for a group to play together. Card games and guessing games, pantomime and word play--all provide an after-dinner evening of fun, or an afternoon of amusement on the couch or around a picnic table. These games are simple to learn, quick to play, and have silly penalties for when a player is out. One side of each card provides the

category, the number of players, and the setup for the game while the other has the rules so you can keep them handy as you play. Test your memory with What's in Grandmother's Trunk?, where each player must remember all the other items that have already been named. Take on The Poet's Chair by remembering more poems, songs, or rhymes than any other player Perhaps you wish to Pass the Slipper? Then close your eyes as players pass a small object and on the count of ten, guess who is holding it. Be careful not to break the rules, or you may have to shake hands blindfolded, pretend to be a parrot, or pay another silly forfeit to account for your blunder. Austen aficionados and Bridgerton bingers will delight in these timeless, irreverent games--so pour your afternoon tea and get ready for an evening of nanty narking!
