*How Art Works* Ellen Winner,2018-10-04 There is no end of talk and of wondering about 'art' and 'the arts.' This book examines a number of questions about the arts (broadly defined to include all of the arts). Some of these questions come from philosophy. Examples include: · What makes something art? · Can anything be art? · Do we experience real emotions from the arts? · Why do we seek out and even cherish sorrow and fear from art when we go out of our way to avoid these very emotions in real life? · How do we decide what is good art? Do aesthetic judgments have any objective truth value? · Why do we devalue fakes even if we -- indeed, even the experts--- can't tell them apart from originals? · Does fiction enhance our empathy and understanding of others? Is art-making therapeutic? Others are common sense questions that laypersons wonder about. Examples include: · Does learning to play music raise a child's IQ? · Is modern art something my kid could do? · Is talent a matter of nature or nurture? This book examines puzzles about the arts wherever their provenance - as long as there is empirical research using the methods of social science (interviews, experimentation, data collection, statistical

analysis) that can shed light on these questions. The examined research reveals how ordinary people think about these questions, and why they think the way they do - an inquiry referred to as intuitive aesthetics. The book shows how psychological research on the arts has shed light on and often offered surprising answers to such questions.

### **Language and Music as Cognitive Systems** Patrick

Rebuschat, Martin Rohrmeier, John A. Hawkins, Ian Cross, 2011-11-03

The past 15 years have witnessed an increasing interest in the comparative study of language and music as cognitive systems. Language and music are uniquely human traits, so it is not surprising that this interest spans practically all branches of cognitive science, including psychology, computer science, linguistics, cognitive neuroscience, and education. Underlying the study of language and music is the assumption that the comparison of these two domains can shed light on the structural and functional properties of each, while also serving as a test case for theories of how the mind and, ultimately, the brain work. This book presents an interdisciplinary study of language and music, bringing together a team of leading specialists across these fields. The volume is structured around four core areas in which the study of music and language has been particularly fruitful: (i) structural comparisons, (ii) evolution, (iii) learning and processing, and (iv) neuroscience. As such it provides a snapshot of the different research strands that have focused on language and music, identifying current trends and methodologies that have been (or could be) applied to the study of both domains, and outlining future research directions. This volume is valuable in promoting the investigation of language and music by fostering interdisciplinary discussion and collaboration. With an ever increasing interest in both music cognition and language, this book will be valuable for students and researchers of

psychology, linguistics, neuroscience, and musicology.

**Songs and Song Writers** Henry T. Finck, 1900

**The Power of Music** Susan Hallam, Evangelos

Himonides, 2022-07-11 Building on her earlier work, 'The Power of Music: A Research Synthesis of the Impact of Actively Making Music on the Intellectual, Social and Personal Development of Children and Young People', this volume by Susan Hallam and Evangelos Himonides is an important new resource in the field of music education, practice, and psychology. A well-signposted text with helpful subheadings, 'The Power of Music: An Exploration of the Evidence' gathers and synthesises research in neuroscience, psychology, and education to develop our understanding of the effects of listening to and actively making music. Its chapters address music's relationship with literacy and numeracy, transferable skills, its impact on social cohesion and personal wellbeing, as well as the roles that music plays in our everyday lives. Considering evidence from large population samples to individual case studies and across age groups, the authors also pose important methodological questions to the research community. 'The Power of Music' defends qualitative research against a requirement for randomised control trials that can obscure the diverse and often fraught contexts in which people of all ages and backgrounds are exposed to, and engage with, music. This magnificent and comprehensive volume allows the evidence about the power of music to speak for itself, thus providing an essential directory for those researching music education and its social, personal, and cognitive impact across human ages and experiences.

*Julius Cahn's Official Theatrical Guide*, 1907

Music, Theater, and Cultural Transfer Annegret Fauser, Mark

Everist, 2009-12-15 Opera and musical theater dominated French

culture in the 1800s, and the influential stage music that emerged from this period helped make Paris, as Walter Benjamin put it, the “capital of the nineteenth century.” The fullest account available of this artistic ferment and its international impact, *Music, Theater, and Cultural Transfer* explores the diverse institutions that shaped Parisian music and extended its influence across Europe, the Americas, and Australia. The contributors to this volume, who work in fields ranging from literature to theater to musicology, focus on the city’s musical theater scene as a whole rather than on individual theaters or repertoires. Their broad range enables their collective examination of the ways in which all aspects of performance and reception were affected by the transfer of works, performers, and management models from one environment to another. By focusing on this interplay between institutions and individuals, the authors illuminate the tension between institutional conventions and artistic creation during the heady period when Parisian stage music reached its zenith.
