Balbuzar Geirard Moncomble, 2021-11-23 In the Sarboucane sea, Balbuzar the pirate reigns supreme. He attacks, plunders, sinks, and ransoms everything that comes within his reach. Savage, cruel, formidable, certainly, Balbuzar is; but also with a certain bonhomie, and a great sense of justice. He is in harmony with the sea, the islands, the wind, the rocks. Around him, birds, always. Men, women, children...they all love him. For he is free as the air. But now the Empress Pépita XIII is worried about her state of affairs, and Balbuzar's constant plundering. She sends against him her best officer, the Commodore, at the head of an armada. He represents force, order, law. Arrogant, domineering, relentless. And sure to be the one who will clean the Sarboucane sea. Balbuzar and the Commodore clash. Two exceptional sailors, two sharp warriors. The fight begins, shattering, tumultuous. The struggle, however, is unequal, for the Commodore has immense resources, an army behind him and the power of the empire. He's built a gigantic ship that will surely sweep away the pirates and their black-flag flotilla. Balbuzar's fate seems certain. Will the outlaw will be crushed by the enormity of the adversary? Cooked in the imperial pot? Or will the cunning pirate will find the rift in the monster's breastplate? Will he will defeat his monstrous foe, like David blasting Goliath? Balbuzar is the story of a confrontation between two worlds, that of royalty and that of piracy, between conformity and diversity. Gérard Moncombe's text deftly balances action, humor and poetry, while artist Frédéric Pillot's stunning, gorgeously detailed illustrations help paint this rousing, unforgettable tale. One that you'll want to come back to again and again... A fable about freedom, about resistance, about power. And an ode to nature.

*New advances in Rehabilitation of Stroke* Xiao Lu, Sheng Li, Xiquan Hu, Hua Yuan, Yue Lan, 2024-01-22 Worldwide, stroke remains one of the leading causes of death and long-term disability, with an estimated prevalence of 2.5%. The prevalence of people living with the effects of stroke has increased because of the growing aging population. As the number of stroke survivors increases, so does the demand for function rehabilitation of stroke. The goal of conventional rehabilitation is to improve residual function and restore independence, but its impact is still limited. Novel therapeutic approaches remain urgent and the potential mechanisms underlying these approaches require further exploration. Therefore, in this Research Topic, our goals include: (1) to explore novel rehabilitation approaches of stroke in both acute and chronic stages; (2) to explore the potential mechanisms underlying novel rehabilitation approaches of stroke; (3) to explore different situations and challenges across different countries regarding rehabilitation of stroke; (4) to identify ways to further improve the quality of rehabilitation for stroke; (5) to identify and remove barriers that limit patients' access to appropriate rehabilitation services.

**Project of Crisis** Marco Biraghi, 2013-08-30 An examination of the influential Italian architectural historian Manfredo Tafuri's historical construction of contemporary architecture. The influential Italian architectural historian Manfredo Tafuri (1935-1994) invoked the productive possibilities of crisis, writing that history is a project of crisis (progetto di crisi). In this entry in the Writing Architecture series, Marco Biraghi explores Tafuri's multifaceted and often knotty oeuvre, using the historian's concept of a project of crisis as a lens through which to examine his historical construction of contemporary architecture. Mindful of Tafuri's

statement that there is no such thing as criticism, only history, Biraghi carefully maps the influences on Tafuri's writing—Walter Benjamin, Karl Krauss, Massimo Cacciari, and the architect Ludovico Quaroni, among others—in order to create a portrait of one of the most complex minds in twentieth-century architecture and architectural history. Tracing an arc from Tafuri's first articles in the magazine *Contropiano* to the idea of contradiction at the center of the project of crisis, Biraghi cites Tafuri's writing on some of his contemporaries, including Louis Kahn, Le Corbusier, Robert Venturi, Aldo Rossi, and the Five Architects (Peter Eisenman, Michael Graves, Charles Gwathmey, John Hejduk, and Richard Meier). Tafuri's historical construction of the contemporary, Biraghi explains, is based on the idea that the past is open, providing the present with ever-changing and indeterminate form. There is no contradiction between Tafuri the historian and Tafuri the contemporary critic, only the greatest possible integration. The importance of Tafuri's interpretation of architecture goes beyond mere academic or historiographic interest, Biraghi argues; Tafuri's notion of the project of crisis is fundamentally important in understanding our present-day architectural condition

*Machine Learning in Computer Vision* Nicu Sebe, Ira Cohen, Ashutosh Garg, Thomas S. Huang, 2006-03-30 The goal of this book is to address the use of several important machine learning techniques into computer vision applications. An innovative combination of computer vision and machine learning techniques has the promise of advancing the field of computer vision, which contributes to better understanding of complex real-world applications. The effective usage of machine learning technology in real-world computer vision problems requires understanding the domain of application, abstraction of a learning problem from a given computer vision task, and the selection of appropriate representations for the learnable (input) and learned (internal) entities of the system. In this book, we address all these important aspects from a new perspective: that the key element in the current computer revolution is the use of machine learning to capture the variations in visual appearance, rather than having the designer of the model accomplish this. As a bonus, models learned from large datasets are likely to be more robust and more realistic than the brittle all-design models.

Taxation of Crypto Assets Niklas Schmidt, Jack Bernstein, Stefan Richter, Lisa Zarlenga, 2020-11-27 The emergence of crypto assets has required taxation authorities worldwide to develop unprecedented policies and compelled tax lawyers to apply existing laws in new ways. This book – the only one to focus solely on the taxation of crypto assets – provides a detailed country-by-country analysis of how the tax law of thirty-nine countries may apply to

this rapidly developing area, including different use cases and compliance and documentation requirements. Following an overview of the technology and key characteristics of crypto assets, as well as the key tax concepts and types of taxes that could apply to them, leading practitioners in each particular jurisdiction summarize the relevant tax law in that country. Fully explained are such aspects of crypto assets as the following and how they are interrelated: sales; exchanges; receipt as remuneration; forks; airdrops; mining; staking; initial coin offerings; security token offerings; and initial exchange offerings. Contributors describe how each jurisdiction applies income and capital gains taxation, value-added tax and sales tax, withholding taxes, transfer taxes, and gift, inheritance, estate and wealth taxes in the context of crypto assets. Reporting requirements and enforcement are also covered. Tax law, as it applies to crypto assets, is new and continues to evolve. This book will be welcomed as the premier resource for tax practitioners, government officials, advisors, investors, issuers, users of crypto assets, and taxation academics who are seeking informed awareness of the policy choices countries make in dealing with the taxation of this new technology. Tax lawyers dealing with crypto assets will have comprehensive practical guidance on how to comply with the tax laws of multiple jurisdictions.

**The ABC of Communism** Nikolai Bukharin, Evgenii Preobrazensky, 2021-04-08 The ABC of Communism is a book written by Nikolai Bukharin and Evgenii Preobrazhensky in 1919, during the Russian Civil War. Originally written to convince the proletariat of Russia to support the Bolsheviks, it became an elementary textbook of communist knowledge. It became the best known and most widely circulated of all pre-Stalinist expositions of Bolshevism and the most

widely read political work in Soviet Russia. Long out of print, and often only being available with the abridged first few chapters, this version includes completed new transcriptions of the last eight chapters along with the Programme of the Communist Party of Russia, a glossary, and a new word index. The ABC of Communism is written to be a systematic description of communism and the proletarian condition under capitalism, away from the reality of Soviet life, into a redirection towards a militant optimism on the horizon. This book in the Radical Reprint series from Pattern Books is made to be accessible and as close to manufacturing cost as possible.

**The Soils of Iran** Mohammad Hassan Roozitalab,Hamid Siadat,Abbas Farshad,2018-03-30 This unique book addresses Iran's extremely rich soil diversity and resources, which have developed under various climatic conditions ranging from dry to humid conditions. Featuring contributions by a group of respected experts on Iranian soils and agriculture, it provides comprehensive information on the management approaches needed for sustainable soil utilization and conservation under such conditions, and the attendant challenges. As such, it offers a valuable resource for anyone interested in soils and agriculture in Iran, but also in other Middle East and North African countries with similar climatic conditions. The book contains 14 chapters which illustrate the long history of indigenous knowledge and soil research, climate, geology and geomorphology, vegetation cover, soil forming factors and processes, major soils, properties and their classification. Furthermore, it presents past climate change and paleosols, agroecological zones, soil fertility, soil biology and biotechnology, human induced land

degradation and “soil management in space and time”. In the end, major challenges facing the soil resources of the country are defined and recommendations are made to face the future challenges.

*Practical Optimization* Andreas Antoniou, Wu-Sheng Lu, 2007-03-12 *Practical Optimization: Algorithms and Engineering Applications* is a hands-on treatment of the subject of optimization. A comprehensive set of problems and exercises makes the book suitable for use in one or two semesters of a first-year graduate course or an advanced undergraduate course. Each half of the book contains a full semester's worth of complementary yet stand-alone material. The practical orientation of the topics chosen and a wealth of useful examples also make the book suitable for practitioners in the field.

*Twelve Years a Slave* Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for

a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Guide to Medical Image Analysis Klaus D. Toennies, 2017-03-29 This comprehensive guide provides a uniquely practical, application-focused introduction to medical image analysis. Topics and features: presents learning objectives, exercises and concluding remarks in each chapter; describes a range of common imaging techniques, reconstruction techniques and image artifacts, and discusses the archival and transfer of images; reviews an expanded selection of techniques for image enhancement, feature detection, feature generation, segmentation, registration, and validation; examines analysis methods in view of image-based guidance in the operating room (NEW); discusses the use of deep convolutional networks for segmentation and labeling tasks (NEW); includes appendices on Markov random field optimization, variational calculus and principal component analysis.

**Unsupervised Learning Algorithms** M. Emre Celebi, Kemal Aydin, 2016-04-29 This book summarizes the state-of-the-art in unsupervised learning. The contributors discuss how with the proliferation of massive amounts of unlabeled data, unsupervised learning algorithms, which can automatically discover interesting and useful patterns in such data, have gained popularity

among researchers and practitioners. The authors outline how these algorithms have found numerous applications including pattern recognition, market basket analysis, web mining, social network analysis, information retrieval, recommender systems, market research, intrusion detection, and fraud detection. They present how the difficulty of developing theoretically sound approaches that are amenable to objective evaluation have resulted in the proposal of numerous unsupervised learning algorithms over the past half-century. The intended audience includes researchers and practitioners who are increasingly using unsupervised learning algorithms to analyze their data. Topics of interest include anomaly detection, clustering, feature extraction, and applications of unsupervised learning. Each chapter is contributed by a leading expert in the field.

Islamic Rulings on Warfare Sherifa Zuhur, Youssef H. Aboul-Enein, 2004 The global war on terror (GWOT) and the battles with specific Islamist groups is, to some degree, a war of ideas. With a better understanding of Islamic concepts of war, peace, and Muslim relations with non-Muslims, those fighting the GWOT may gain support and increase their efficacy. The authors explain the principles of jihad and war and their conduct as found in key Islamic texts, the controversies that have emerged from the Quranic verses of war and peace, and the conflict between liberal or moderate Islamic voices and the extremists on matters such as the definition of combatants, treatment of hostages, and suicide attacks.

**Introduction to Parallel Processing** Behrooz Parhami, 2006-04-11 THE CONTEXT OF PARALLEL PROCESSING The field of digital computer architecture has grown explosively in the past two decades. Through a steady stream of experimental research, tool-building efforts, and theoretical studies, the design of an instruction-set architecture, once considered an art, has been transformed into one of the most quantitative branches of computer technology. At the same time, better understanding of various forms of concurrency, from standard pipelining to massive parallelism, and invention of architectural structures to support a reasonably efficient and user-friendly programming model for such systems, has allowed hardware performance to continue its exponential growth. This trend is expected to continue in the near future. This explosive growth, linked with the expectation that performance will continue its exponential rise with each new generation of hardware and that (in stark contrast to software) computer hardware will function correctly as soon as it comes off the assembly line, has its down side. It has led to unprecedented hardware complexity and almost intolerable development costs. The challenge facing current and future computer designers is to institute simplicity where we now have complexity; to use fundamental theories being developed in this area to gain performance and ease-of-use benefits from simpler circuits; to understand the interplay between technological capabilities and limitations, on the one hand, and design decisions based on user and application requirements on the other.
