Proapoptotic Activity of Ukrain Is Based on Chelidonium Majus L. Alkaloids and Mediated Via a Mitochondrial Death Pathway Applied Research Applied Research Press,2015-09-14 The anticancer drug Ukrain (NSC-631570) which has been specified by the manufacturer as semisynthetic derivative of the Chelidonium majus L. alkaloid chelidonine and the alkylans thiotepa was reported to exert selective cytotoxic effects on human tumour cell lines in vitro. Few clinical trials suggest beneficial effects in the treatment of human cancer. Aim of the present study was to elucidate the importance of apoptosis induction for the antineoplastic activity of Ukrain, to define the molecular mechanism of its cytotoxic effects and to identify its active constituents by mass spectrometry. The potent proapoptotic effects of Ukrain are not due to the suggested Ukrain-molecule but to the cytotoxic efficacy of Chelidonium majus L. alkaloids including chelidonine.

Plants that Fight Cancer Spiridon E. Kintzios,Maria G. Barberaki,2004-01-15 An increasing amount of cancer research is being directed towards the investigation of plant-derived anticancer compounds, many of which have been used in traditional herbal treatments for centuries. Plants that Fight Cancer is an up-to-date, extensive review of plant genera and species with documented anti-tumor and anti-leukaemic properties. Following an overview of the disease and the diverse methods of therapy and clinical testing, the book provides a detailed examination of the plants whose compounds are currently used in conventional cancer treatment, the species which show the greatest potential as future candidates, and other species with established anticancer properties. The third section explores each of more than 150 terrestrial plant genera and species, with a review of their traditional uses, mythology, botany, active ingredients, and product applications, along with photographs and illustrations and an analysis of expected results and risks. The text closes with a discussion of algal extracts and isolated metabolites with anticancer activity, a summary of published research for each species, and chemical structures of the most important compounds.
