*Tone Psychology: Volume I* Carl Stumpf, 2019-09-17 Carl Stumpf (1848-1936) was a German philosopher and psychologist and a visionary and important academic. During his lifetime, he ranked among the most prominent scientists of his time. Stumpf's intention, as evident in his book, *Tone Psychology*, was to investigate the phenomenon of tone sensation in order to understand the general psychic functions and processes underlying the perception of sound and music. It could be argued that modern music psychology has lost or perhaps ignored the epistemological basis that Carl Stumpf developed in his *Tone Psychology*. To gain a confident psychological basis, the relevance of Stumpf's deliberations on music psychology cannot be overestimated. Analyses of the essence of tones, complex tones and sounds are fundamental topics for general psychology and epistemology. By the end of this two-volume work, Stumpf had established an epistemology of hearing. The subject of Volume I is the sensation of successive single tones. Stumpf demonstrates that analysis leads to the realisation of a plurality (is there only one tone or are there several tones?), which is then followed by

a comparison: an increase may be observed (one tone is higher than the other) or a similarity may be realised (both tones have the same pitch or the same loudness). With almost mathematical stringency, Stumpf developed a topology of tones. Volume II deals with the sensation of two simultaneous tones (musical intervals). The books are stimulating, rewarding and provocative and will appeal to music psychologists, music theorists, general psychologists, philosophers, epistemologists and neuroscientists.

**Tone in Yongning~Na** Alexis Michaud, 2017-04-26 Yongning Na, also known as Mosuo, is a Sino-Tibetan language spoken in Southwest China. This book provides a description and analysis of its tone system, progressing from lexical tones towards morphotonology. Tonal changes permeate numerous aspects of the morphosyntax of Yongning Na; they are not the product of a small set of phonological rules, but of a host of rules that are restricted to specific morphosyntactic contexts. Rich morphotonological systems have been reported in this area of Sino-Tibetan, but book-length descriptions remain few. This study of an endangered language contributes to a better understanding

of the diversity of prosodic systems in East Asia. The analysis is based on original fieldwork data (made available online), collected over the course of ten years, commencing in 2006.

**The STREAM TONE: The Future of Personal Computing?** T. Gilling, 2017-02-13 Personal computing is changing from an old world of local services provided by local devices to a new world of remote Web-based services provided by cloud computing-based data centres. This book explores in detail what might be required to make a comprehensive move to this exciting new world and the many benefits that move could bring.

**Word Art + Gesture Art = Tone Art** Hanns-Werner Heister, Hanjo Polk, Bernhard Rusam, 2023-03-06  
This book offers a truly interdisciplinary discussion on the relationship between the vocal and the instrumental in music and other arts and in everyday communication alike. Presenting an in-depth

systematical and historical analysis of the evolution of word and gesture art, it gives extensive information on the anthropological, biological, and physiological influences and interactions in music and beyond. The book gives a unique definition of the genuinely vocal and instrumental from their generative deep structure: They derive from and are determined in their production by the duality of voice and hands, and in terms of product as the tone or ‘tonal’ on the one hand, and the percussive, that is noise plus rhythm, on the other. This book succeeds in bringing together perspectives from art, and from natural and social sciences, merging them to offer new explanations about the relationship between the vocal and instrumental, and eventually about the origins of music, arts, and language. It offers new perspectives on the intertwining between the vocal and the instrumental, specifically in the context of the expressions of human languages. At the same time, this book aims at clarifying and explaining the role of words and gestures in different contexts, such as society and communication, education, and arts.

*REGIONAL ACCENTED MANDARIN TONE* HUANGMEI LIU, 2024-02-29 This book has its unique value as the pioneer study on the regional variants of Mandarin by experimental phonetics methods, sociophonetic methods, and AI assisted big data methods. Dialectal Mandarins are commonly well-recognized variations for standards Mandarin that have regional characteristics. This book is divided into four parts. The first part introduces Chinese, Chinese dialects, and Mandarin tones. In part two, the book makes a comprehensive and systematic comparison among Beijing Mandarin, Shanghai Mandarin, and Guangzhou Mandarin as the three major Mandarin variants by both the experimental phonetic methods and by using deep learning method. In the deep learning chapter, this book explores whether deep learning can recognize regional dialects patterns from the large amounts of data, and whether it can successfully identify the tonal system of each region's dialects. The experimental results show that deep learning performs perfectly well in regional dialect recognition and tonal system learning. Liu Yuxuan, a student from USST, provided important technical support for the deep learning experiment. The third part further deepens the research perspective, and studies the geographically

close subregional Mandarin. This part involves both acoustic research and perceptual research on three geographically close subregional dialects of Mandarin. The last part is a report on two experiments investigating dialectal experience's role in predicting listeners' subjective depiction on both non-categorical and categorical tonal variants of the official language, Putonghua. The dialectal resources recorded in this book are also valuable. The book is supposed to contribute to new progress in academic study on language variation, language evolution, experimental phonetics methods, as well as AI programming.

*Tone* Victoria A. Fromkin, 2014-05-10 *Tone: A Linguistic Survey* is a nine-chapter text that considers the phonetics and phonology of tone from both a synchronic and a diachronic point of view. The first chapters deal with the physiological and perceptual correlations of tone. These chapters also describe the interactions of tonal and nontonal features. The succeeding chapters provide the phonetic basis for phonological tonal phenomena. These topics are followed by discussions of the physical and physiological aspects of tone, the number of possible contrastive tones in a language, and a

suprasegmental representation of tones based on linguistic evidence. This text also summarizes the kinds of tone rules found in languages and the important syntactic function played by tone in a number of the world's languages, particularly those in Africa. The final chapters look into the general and specific principles that constrain historical tone change. This book will prove useful to students with phonology course.

Tone Moira Yip,2002-08-15 The sounds of language can be divided into consonants, vowels, and tones - the use of pitch to convey word meaning. Seventy percent of the world's languages use pitch in this way. Assuming little or no prior knowledge of the topic, this textbook provides a clearly organized introduction to tone and tonal phonology. Comprehensive in scope, it examines the main types of tonal systems found in Africa, the Americas, and Asia, using examples from the widest possible range of tone languages. It provides students with a basic grasp of the simple phonetics of tone, and covers key topics such as the distinctive feature systems suitable for tonal contrasts, allophonic and morphophonological tonal alterations, and how to analyze them within Optimality Theory. The book also examines the perception and acquisition of tone, as well as the interface between tonal phonology and the morphosyntax.
