From NACA to NASA to Now Roger D. Launius, A compelling history of America's air and space agencies NASA, and its predecessor NACA, have captured the American imagination for more than a hundred years. From NACA to NASA to Now: Expanding the Frontiers of Air and Space commemorates the organizations' incredible accomplishments that have shaped the aerospace landscape and the world. Former NASA chief historian Roger D. Launius explores aerospace history through the lenses of international efforts; the relationships between NACA/NASA and the military, universities, and US corporations; and research and development. He examines how the organizations' technology and techniques have had enduring influence that guide space exploration to this day, highlighting all the triumphs, disappointments, and wonders along the way.

The Seventh Landing Michael Carroll, 2009-08-15 It's been thirty-five years since people last trod the dusty plains of the Moon. Over the course of six landings from 1969 to 1972, twelve men explored, four-wheeled, dug and hiked across the lunar surface. Now, NASA has plans for a seventh landing on the Moon. This time, they want to stay. NASA's plans, dubbed the Constellation architecture, involve the largest launch vehicle ever built, new types of propulsion, and a six-person vehicle to ferry crews from Earth to the Moon. But NASA's plans go far beyond Luna. Eventually, the lessons learned on the Moon's outpost at Shackleton Crater will teach us how to live—permanently—on the most Earthlike world in our solar system, Mars. NASA will have company: plans for future lunar exploration are being drawn by Europe, Japan, China and India. While specific hardware and mission details will be in flux for

some time, the overarching goals, strategies and inspiration for the seventh landing will not change. This book will choose a typical scenario for getting to the Moon that embraces the spirit of exploration embodied by NASA's Constellation architecture. Each chapter moves from a general description to the specific nuts-and-bolts of engineering and science. The Seventh Landing reveals the very latest strategies for how we'll get to the Moon, what we know today, what we want to find out, and what life will be like at the first true outposts on the Moon and Mars.

Lost in Space Greg Klerkx, 2005-01-11 The daring, revolutionary NASA that sent Neil Armstrong to the moon has lost its meteoric vision, says journalist and space enthusiast Greg Klerkx. NASA, he contends, has devolved from a pioneer of space exploration into a factionalized bureaucracy focused primarily on its own survival. And as a result, humans haven't ventured beyond Earth orbit for three decades. Klerkx argues that after its wildly successful Apollo program, NASA clung fiercely to the spotlight by creating a government-sheltered monopoly with a few Big Aerospace companies. Although committed in theory to supporting commercial spaceflight, in practice it smothered vital private-sector innovation. In striking descriptions of space milestones spanning the golden 1960s Space Age and the 2003 Columbia tragedy, Klerkx exposes the "real" NASA and envisions exciting public-private cooperation that could send humans back to the moon and beyond.

The Art of NASA Piers Bizony, 2020-10-06 Formed in 1958, NASA has long maintained a department of visual artists to depict the concepts and technologies created in humankind's quest to explore the final frontier. Culled from a carefully chosen reserve of approximately 3,000 files deep in the NASA archives, the 200 artworks presented in this large-format edition

provide a glimpse of NASA history like no other. *A 2021 Locus Award Winner* From space suits to capsules, from landing modules to the Space Shuttle, the International Space Station, and more recent concepts for space planes, The Art of NASA presents 60 years of American space exploration in an unprecedented fashion. All the landmark early missions are represented in detail—Gemini, Mercury, Apollo—as are post-Space Race accomplishments, like the mission to Mars and other deep-space explorations. The insightful text relates the wonderful stories associated with the art. For instance, the incredibly rare early Apollo illustrations show how Apollo might have looked if the landing module had never been developed. Black-and-white Gemini drawings illustrate how the massive NASA art department did its stuff with ink pen and rubdown Letraset textures. Cross-sections of the Apollo-Soyuz Test Project docking adapter reveal Russian sensitivity about US “male” probes “penetrating” their spacecraft, thus the androgynous “adapter” now used universally in space. International Space Station cutaways show how huge the original plan was, but also what was retained. Every picture in The Art of NASA tells a special story. This collection of the rarest of the rare is not only a unique view of NASA history—it’s a fascinating look at the art of illustration, the development of now-familiar technologies, and a glimpse of what the space program might have looked like.

Space Chronicles: Facing the Ultimate Frontier Neil deGrasse

Tyson, 2012-02-27 “A compelling appeal, at just the right time, for continuing to look up.”—Air & Space America’s space program is at a turning point. After decades of global primacy, NASA has ended the space-shuttle program, cutting off its access to space. No astronauts will be launched in an American craft, from American soil, until the 2020s, and NASA may soon find itself eclipsed

by other countries' space programs. With his signature wit and thought-provoking insights, Neil deGrasse Tyson—one of our foremost thinkers on all things space—illuminates the past, present, and future of space exploration and brilliantly reminds us why NASA matters now as much as ever. As Tyson reveals, exploring the space frontier can profoundly enrich many aspects of our daily lives, from education systems and the economy to national security and morale. For America to maintain its status as a global leader and a technological innovator, he explains, we must regain our enthusiasm and curiosity about what lies beyond our world. Provocative, humorous, and wonderfully readable, *Space Chronicles* represents the best of Tyson's recent commentary, including a must-read prologue on NASA and partisan politics. Reflecting on topics that range from scientific literacy to space-travel missteps, Tyson gives us an urgent, clear-eyed, and ultimately inspiring vision for the future.

Apollo in Perspective Jonathan Allday, 2018-02-06 *Apollo in Perspective: Spaceflight Then and Now* takes a retrospective look at the Apollo space program and the technology that was used to land a man on the Moon. Using simple illustrations and school-level mathematics, Jonathan Allday explains the basic physics and technology of spaceflight and conveys the huge technological strides that were made and the dedication of the people working on the program. Physics topics covered include the laws of motion, rocketry, how to maneuver in orbit, and more. Informal and engaging, the book also discusses the designs of the Apollo Command, Service and Lunar modules and how these changed as the plans for the manned mission evolved. Guidance systems, computers, and engines all had to be developed for the first time. With Apollo as background, the book proceeds to look at the space shuttle,

the technology being developed for its replacement, the International Space Station, and the possibilities for a manned Mars mission. The book concludes with an exploration of the far future, including Mars colonies and journeys to other stars.

*Includes pictures *Includes a bibliography for further reading Today the Space Race is widely viewed poignantly and fondly as a race to the Moon that culminated with Apollo 11 winning the Race for the United States. In fact, it encompassed a much broader range of competition between the Soviet Union and the United States that affected everything from military technology to successfully launching satellites that could land on Mars or orbit other planets in the Solar System. Moreover, the notion that America won the Space Race at the end of the 1960s overlooks just how competitive the Space Race actually was in launching people into orbit, as well as the major contributions the Space Race influenced in leading to today's International Space Station and continued space exploration. Space exploration was always an expensive business, and throughout NASA's history, the agency has had to justify to Congress its need for every dollar it intended to spend. This problem has helped NASA to be more careful and more creative with the money they did receive, and scientists had to justify the equipment they wanted to include on each space probe. They had to justify the size and the power demand, too. If they wanted too much, the entire mission might be scrubbed, and all their work would have been for naught. This made planning and designs leaner and more efficient, as scientists and engineers were more careful with their recommendations. At the same time, scientists have been repeatedly surprised by their discoveries. Some of those discoveries revealed the

dangers of space, like the Van Allen radiation belt, dangerous to astronauts without the right kind of protection. NASA also discovered the massive radiation belt surrounding Jupiter thanks to the Pioneer probes in 1973 and 1974. Similarly, with the knowledge that Titan, the largest moon of Saturn, has a thick atmosphere, later missions were sent to investigate the moon up close. Thus, the Huygens lander pierced the Titan atmosphere in January of 2005 to investigate. Although Apollo 11's successful mission to the Moon is seen as the culmination of the Space Race, and the Apollo program remains NASA's most famous, one of the space agency's most successful endeavors came a few years later. In fact, the Pioneer program was the most diversified sequence of any of NASA's programs, and though they're now remembered for being among the first probes in history to reach the Outer Solar System, the elaborate planning changed goals several times over several years before resulting in historic successes. NASA had wanted to do a Grand Tour of the Solar System toward the end of the 1970s to take advantage of the scheduled alignment of planets, which meant the Pioneer missions were meant to be test runs prior to the main events (Voyager 1 and Voyager 2), and a great many things discovered by Pioneer 10 and Pioneer 11 were essential to the successful planning of the Voyager probes. In 1977, the Voyager spacecraft were launched from Earth to explore the outer Solar System, and incredibly, the now-ancient technology from the 1970s is still working, sending daily reports back to the planet that sent the two robotic envoys on their way over 40 years ago. Voyager 1 and 2 have done far more than accomplish their original missions. In fact, they are now exploring interstellar space, far beyond the outer planets in the cold wasteland between the stars. Each spacecraft carries a copy of a golden record which contains an introduction

to Earth, should some alien civilization happen to encounter either Voyager 1 or Voyager 2. In the first Star Trek movie, writers imagined just that, creating a story of a Voyager spacecraft being captured and adapted for its own uses.

50 Years of Solar System Exploration Linda Billings, 2020 To commemorate the 50th anniversary of the first successful planetary mission, Mariner 2 sent to Venus in 1962, the NASA History Program Office, the Division of Space History at the National Air and Space Museum, NASA's Science Mission Directorate, and the Jet Propulsion Laboratory organized a symposium. Solar System Exploration @ 50 was held in Washington, D.C., on 25-26 October 2012. The purpose of this symposium was to consider, over the more than 50-year history of the Space Age, what we have learned about the other bodies of the solar system and the processes by which we have learned it. Symposium organizers asked authors to address broad topics relating to the history of solar system exploration such as various flight projects, the development of space science disciplines, the relationship between robotic exploration and human spaceflight, the development of instruments and methodologies for scientific exploration, as well as the development of theories about planetary science, solar system origins and implications for other worlds. The papers in this volume provide a richly textured picture of important developments - and some colorful characters - in a half century of solar system exploration. A comprehensive history of the first 50 years of solar system exploration would fill many volumes. What readers will find in this volume is a collection of interesting stories about money, politics, human resources, commitment, competition and cooperation, and the faster, better, cheaper era of solar system exploration-

The Space Shuttle Piers Bizony, 2015-04-01 Get a full retrospective of all 134 flights, every mission, of the space shuttle program. This superbly designed and lavishly illustrated reissue of the best-selling hardcover book marks a special moment in history: the final mission of the space shuttle. Noted space and science author Piers Bizony's retrospective covers the entire space shuttle program that began in 1981 and ended in 2011. Every space shuttle mission is detailed, including all flights of the Columbia, Challenger, Discovery, Atlantis, and Endeavour spacecraft. The book also covers the development and design of the orbiter, as well as the technical specifications of the vehicle and details of its major assemblies and subassemblies. A full double-gatefold provides a large-scale technical drawing of the space shuttle. If you never got to watch the countdown clock in person during a space shuttle launch, *The Space Shuttle* is your chance to relive the history of America's first low Earth orbital spacecraft.

Comm Check... Michael Cabbage, William Harwood, 2009-12-01 On February 1, 2003, the unthinkable happened. The space shuttle Columbia disintegrated 37 miles above Texas, seven brave astronauts were killed and America's space program, always an eyeblink from disaster, suffered its second catastrophic in-flight failure. Unlike the Challenger disaster 17 years earlier, Columbia's destruction left the nation one failure away from the potential abandonment of human space exploration. Media coverage in the immediate aftermath focused on the possible cause of the disaster, and on the nation's grief. But the full human story, and the shocking details of NASA's crucial mistakes, have never been told -- until now. Based on dozens of exclusive interviews, never-before-published documents and recordings of key meetings obtained by the authors, *Comm Check* takes the reader inside the conference

rooms and offices where NASA's best and brightest managed the nation's multi-billion-dollar shuttle program -- and where they failed to recognize the signs of an impending disaster. It is the story of a space program pushed to the brink of failure by relentless political pressure, shrinking budgets and flawed decision making. The independent investigation into the disaster uncovered why Columbia broke apart in the sky above Texas. Comm Check brings that story to life with the human drama behind the tragedy. Michael Cabbage and William Harwood, two of America's most respected space journalists, are veterans of all but a handful of NASA's 113 shuttle missions. Tapping a network of sources and bringing a combined three decades of experience to bear, the authors provide a rare glimpse into NASA's inner circles, chronicling the agency's most devastating failure and the challenges that face NASA as it struggles to return America to space.

What Is NASA? Sarah Fabiny, Who HQ, 2019-05-07 Find out all about NASA in this out-of-this-world addition to the What Was? series. The National Aeronautics and Space Administration, better known as NASA, began in 1958. With its creation, the United States hoped to ensure it won the space race against the Soviet Union. Author Sarah Fabiny describes the origins of NASA, the launching of the Apollo program that landed the first human on the moon, and the many missions and discoveries that have taken place since then. NASA has a rich history and still plays an important role in uncovering the mysteries of the universe. Readers are sure to get sucked into this book.

Way Station to Space National Aeronautics Administration, Mack Herring, 2013-10 Way Station to Space is a history of the NASA John C. Stennis Space Center, one of NASA's 10 Field Centers which was built in the enormously exciting days of the Apollo program for a specific purpose-to

static fire and certify the huge Saturn V boosters used in the Apollo lunar landing program. With an eye to the future, the facility was planned as a national testing site for large propulsion systems that NASA might use for 25 to 50 years. This book provides the reader with a study of the Apollo era when NASA engineers, technicians, and managers were engaged in that fantastic mission. It captures a sense of the excitement and determination of the NASA team as it prepared for those historic journeys to our nearest planetary neighbor. This book, however, also illustrates the evolution of the south Mississippi facility beyond the Apollo era. The development of the traditions and pride of the NASA Government and contractor teams, formulated during those early years, is likewise portrayed. As is indicated in the text, few of the men and women of that time are still actively working with us, but their tradition of excellence and hard work lives on. As the Apollo program began to ebb, the Nation's focus shifted away from the most ambitious plans for space exploration—to colonize the Moon, construct a Space Station, and mount a human mission to Mars—to less costly endeavors. Under creative management, the Mississippi team began to study the Nation's new priorities with the intention of becoming an integral part of the changing times. The Mississippi Test Facility (MTF—former name of SSC) diversified and brought in other Federal and State agencies to help share the cost of the Center and use of the developing technology. MTF personnel began looking for other customers, private and commercial, in addition to their new Government tenants. The men and women of the MTF were, in a real sense, reinventing Government over 25 years ago, long before that concept came into vogue. Way Station to Space takes the reader back through those interesting times and relates the story of how the small team evolved into a paradigm of engineering and scientific

cooperation for others to follow. The MTF team recycled facilities and resources, turning part of the huge Center into a diverse environmental research center. The Stennis Space Center now serves as a model of multiagency synergy and is home to over 30 Federal and State agencies, universities, and private industries. This new addition to the NASA history series also illustrates how the men and women of this south Mississippi facility met challenges head-on. They not only preserved their installation, but they built a new foundation for the future. As a result in 1996, the Stennis Space Center was officially designated as NASA's Lead Center for rocket propulsion testing and in 1997 as the Lead Center for Commercial Remote Sensing. Way Station to Space is not only the history of one of NASA's Centers, it is also an allegory of the Center's relationship to the local communities in Mississippi and Louisiana, its sister Centers, and to NASA Headquarters. Not only does this book tell an interesting story about the Stennis Space Center and NASA's first decades of space exploration, it also offers a guide to the changing times ahead as we approach the new millennium. Perhaps just as importantly, Way Station to Space captures the true spirit of NASA that abides with us today as we meet the challenges of tomorrow.

Apollo 17 Lyndon B. Johnson Space Center, 1973 The Apollo 17 flight and lunar landing, the sixth and final lunar landing and third extended science capability mission in the Apollo Program, are discussed with emphasis on the scientific endeavors conducted on the lunar surface. The scientific investigation of the mission is presented in three interrelated types of activities: the lunar surface sampling and observation, the lunar surface experiments, and the inflight experiments. Collection, documentation, and description of the lunar samples are discussed with a preliminary evaluation

and analysis. The lunar surface experiments are described, including the results and their relationship to the scientific objectives of each experiment. The geochemical, photographic, geophysical, topographic, and medical data resulting from experiments conducted in flight are presented.

Astronaut Maker Michael Cassutt, 2018-08-01 One of the most elusive and controversial figures in NASA's history, George W. S. Abbey was called the Dark Lord, the Godfather, and UNO (unidentified NASA official) by those within NASA. From young pilot and wannabe astronaut to engineer, bureaucrat, and finally director of the Johnson Space Center (mission control), Abbey's story has never been fully told—until now. This fascinating account takes readers inside NASA to learn the real story of how Abbey rose to power and wielded it out of the spotlight. Informed by countless hours of interviews with Abbey and his family, friends, adversaries, and former colleagues, *The Astronaut Maker* is the ultimate insider's account of ambition and power politics at NASA.

Leadership Moments from NASA Dr. Dave Williams, Elizabeth Howell, PhD, 2021-07-06 The NASA way: lessons on leadership, teamwork, and corporate culture. How does NASA take on seemingly insurmountable challenges, recover from tragedy and continue to attract the best and brightest talent? Space exploration is as much a story of leadership and teamwork as it is a story of exploration and discovery. *Leadership Moments from NASA* delves into the culture of the famed organization and examines the leadership styles and insights of NASA senior executives spanning five decades of human spaceflight to share the lessons they learned from critical moments. How did they prioritize? How did they resolve differences? How did they decide what to do when no one had done it before? How did they build highly competent teams?

How did they build organizational resilience? How did they fight complacency and rebuild a culture of safety and innovation? Through the use of NASA oral histories and interviews, this book shows how NASA recovered from tragedy and adversity, and how it developed a culture of competency that continues to attract the best and brightest.

New Space Frontiers Piers Bizony, 2014-10-15 Take a journey into the New Space Frontier! It is easy to imagine that the space shuttle's retirement has

edged the Space Age toward closure, at least in terms of human flight beyond the bounds of earth. In fact, there are more people-carrying ships being constructed now than at any time since Yuri Gagarin became the first man in space half a century ago. Some are already servicing the International Space Station - which, incidentally, has ensured a permanent human presence in space for the last two decades, and is set to continue and expand for decades yet to come. What's more, NASA is no longer the only big player in the space game. Commercial, non-governmental space exploration is becoming a reality rather than just a pipe dream. What orbital adventures await us in the next five decades? Will humans ever again head into deep space, as the Apollo astronauts once did? NASA's new hardware is aimed toward asteroid missions, and ultimately, Mars, but there is a significant chance that a government funded space agency will not be the only - or even the first - organization to send humans across the solar system. Get ready to experience the excitement of adventure with New Space Frontier. Through gorgeous photography and engaging writing, noted space and science author Piers Bizony speculates beyond just today's hardware and explores what might be possible for the next generation.

A Dictionary of the Space Age Paul Dickson, 2009-05-18 2009 Outstanding Academic Title, Choice The launch of Sputnik 1 in 1957 ushered in an exciting era of scientific and technological advancement. As television news anchors, radio hosts, and journalists reported the happenings of the American and the Soviet space programs to millions of captivated citizens, words that belonged to the worlds of science, aviation, and science fiction suddenly became part of the colloquial language. What's more, NASA used a litany of acronyms in much of its official correspondence in an effort to transmit as much

information in as little time as possible. To translate this peculiar vocabulary, Paul Dickson has compiled the curious lingo and mystifying acronyms of NASA in an accessible dictionary of the names, words, and phrases of the Space Age. Aviators, fighter pilots, and test pilots coined the phrases "spam in a can" (how astronauts felt prelaunch as they sat in a tiny capsule atop a rocket booster); "tickety-boo" (things are fine), and "the Eagle has landed" (Neil Armstrong's famous quote when Apollo 11 landed on the Moon). This dictionary captures a broader foundation for language of the Space Age based on the historic principles employed by the Oxford English Dictionary and Webster's New Third International Dictionary. Word histories for major terms are detailed in a conversational tone, and technical terms are deciphered for the interested student and lay reader. This is a must-own reference for space history buffs.
