Life as We Do Not Know It Peter Ward, 2007-02-27 An engrossing and revelatory first look at the search for alien life—on Earth and beyond For the past twenty years, Peter Ward has been at the forefront of popular science writing, with books such as the influential and controversial *Rare Earth*. In *Life as We Do Not Know It*, Ward, with his signature blend of eloquence, humor, and learned insight, vividly details the latest scientific findings, cutting-edge research, and intrepid new theories on the subject of alien life and the possible extraterrestrial origins of life on Earth. In lucid, entertaining, and bold prose, Peter Ward once again challenges our notions of life on earth (and beyond).

A Meeting with the Universe United States. National Aeronautics and Space Administration, 1981 A Meeting with the Universe is the story of what we learned about the universe and ourselves by going into space. It is not a textbook for scientists. It is written for everyone who shared the excitement and wonder for the last few years -- students, teachers, scientists, other professional people, and curious citizens of all kinds. It is not a NASA history. It is a history of space exploration -- by NASA, by universities, by other government agencies, and by industries -- all of whom have played major roles. We have not attempted to apportion credit here; space has been studied by many, and the discoveries belong to us all. The book itself is a novel experiment in writing about science for non-scientific readers. It was not produced by science writers or journalists, but written and edited entirely by a group of NASA scientists, all of whom are deeply involved in space science activities and many of whom actively participated in the discoveries they describe. ... We are now at a watershed in space. After 20 years of challenging and exciting activity, we have done most of the easy things and made most of the obvious discoveries. What do we do next? How do we tackle the many new questions that have arisen about the Sun, the Earth, the other worlds, the universe around us, and ourselves? These are not just scientific questions. Their answers involve the understanding of the Earth's geology, its weather, and its climate -- factors that will affect the survival of our civilization, perhaps even of our species. ... Although we have only begun our movement into space, we have already traveled far and seen much. We have a shining vision of the universe and our future in it. Without that vision, without the will to follow it, something important in us -- perhaps we ourselves -- will perish. -- From the preface, Dr. John E. Naugle, Chief Scientist, NASA.

From NACA to NASA to Now Roger D. Launius, A compelling history of America's air and space agencies NASA, and its predecessor NACA, have captured the American imagination for more than a hundred years. From NACA to NASA to Now: Expanding the Frontiers of Air and Space commemorates the organizations' incredible accomplishments that have shaped the aerospace landscape and the world. Former NASA chief historian Roger D. Launius explores aerospace history through the lenses of international efforts; the relationships between NACA/NASA and the military, universities, and US corporations; and research and development. He examines how the organizations' technology and techniques have had enduring influence that guide space exploration to this day, highlighting all the triumphs, disappointments, and wonders along the way.

We Could Not Fail Richard Paul, Steven Moss, 2015-05-01 This “surprising and insightful” history profiles ten African American engineers, mathematicians, and others who worked for NASA’s space program (Lauren Helmuth, New York Times Book Review). The Space Age began just as the struggle for civil rights forced Americans to confront the bitter legacy of slavery, discrimination, and violence against African Americans. NASA itself became an agent of social change, with President Kennedy opening its workplaces to African Americans. In *We Could Not Fail*, Richard Paul and Steven Moss profile ten pioneer African American space workers whose stories illustrate the role NASA and the space program played in

promoting civil rights. Paul and Moss recount how these technicians, mathematicians, engineers, and an astronaut candidate surmounted barriers and navigated being the sole African American in a NASA work group. These brave and determined men went on to help transform Southern society by integrating colleges, patenting new inventions, holding elective office, and reviving and governing defunct towns. Adding new names to the roster of civil rights heroes and a new chapter to the story of space exploration, *We Could Not Fail* demonstrates how African Americans broke the color barrier by competing successfully at the highest level of American intellectual and technological achievement.

Failure Is Not an Option Gene Kranz, 2009-06-23 The author, flight director in NASA's Mission Control, tells of the challenges in space flight from the very early years to the current time and of his own bold suggestions about what we ought to be doing in space now.--Jacket.

Doing the Impossible Arthur L. Slotkin, 2012-07-26 Apollo was known for its engineering triumphs, but its success also came from a disciplined management style. This excellent account of one of the most important personalities in early American human spaceflight history describes for the first time how George E. Mueller, the system manager of the human spaceflight program of the 1960s, applied the SPO methodology and other special considerations such as "all-up" testing, resulting in the success of the Apollo Program. Wernher von Braun and others did not readily accept such testing or Mueller's approach to system management, but later acknowledged that without them NASA would not have landed astronauts on the Moon by 1969. While Apollo remained Mueller's priority, from his earliest days at the agency, he promoted a robust post-Apollo Program which resulted in Skylab, the Space Shuttle and the International Space Station. As a result of these efforts, Mueller earned the sobriquet: "the father of the space shuttle." Following his success at NASA, Mueller returned to industry. Although he did not play a leading role in human spaceflight again, in 2011 the National Air and Space Museum awarded him their lifetime achievement trophy for his contributions. Following the contributions of George E. Mueller, in this unique book Arthur L. Slotkin answers such questions as: exactly how did the methods developed for use in the Air Force ballistic missile programs get modified and used in the Apollo Program? How did George E. Mueller, with the help of others, manage the Apollo Program? How did NASA centers, coming from federal agencies with cultures of their own, adapt to the new structured approach imposed from Washington? George E. Mueller is the ideal central character for this book. He was instrumental in the creation of Apollo extension systems leading to Apollo, the Shuttle, and today's ISS and thus was a pivotal figure in early American human spaceflight history.

The Seventh Landing Michael Carroll, 2009-08-15 It's been thirty-five years since people last trod the dusty plains of the Moon. Over the course of six landings from 1969 to 1972, twelve men explored, four-wheeled, dug and hiked across the lunar surface. Now, NASA has plans for a seventh landing on the Moon. This time, they want to stay. NASA's plans, dubbed the Constellation architecture, involve the largest launch vehicle ever built, new types of propulsion, and a six-person vehicle to ferry crews from Earth to the Moon. But NASA's plans go far beyond Luna. Eventually, the lessons learned on the Moon's outpost at Shackleton Crater will teach us how to live—permanently—on the most Earthlike world in our solar system, Mars. NASA will have company: plans for future lunar exploration are being drawn by Europe, Japan, China and India. While specific hardware and mission details will be in flux for some time, the overarching goals, strategies and inspiration for the seventh landing will not change. This book will choose a typical scenario for getting to the Moon that embraces the spirit of exploration embodied by NASA's Constellation architecture. Each chapter moves from a general description to the specific nuts-and-bolts of engineering and science. *The Seventh Landing* reveals the very latest strategies for how we'll get to the

Moon, what we know today, what we want to find out, and what life will be like at the first true outposts on the Moon and Mars.

Way Station to Space National Aeronautics Administration, Mack Herring, 2013-10 Way Station to Space is a history of the NASA John C. Stennis Space Center, one of NASA's 10 Field Centers which was built in the enormously exciting days of the Apollo program for a specific purpose-to static fire and certify the huge Saturn V boosters used in the Apollo lunar landing program. With an eye to the future, the facility was planned as a national testing site for large propulsion systems that NASA might use for 25 to 50 years. This book provides the reader with a study of the Apollo era when NASA engineers, technicians, and managers were engaged in that fantastic mission. It captures a sense of the excitement and determination of the NASA team as it prepared for those historic journeys to our nearest planetary neighbor. This book, however, also illustrates the evolution of the south Mississippi facility beyond the Apollo era. The development of the traditions and pride of the NASA Government and contractor teams, formulated during those early years, is likewise portrayed. As is indicated in the text, few of the men and women of that time are still actively working with us, but their tradition of excellence and hard work lives on. As the Apollo program began to ebb, the Nation's focus shifted away from the most ambitious plans for space exploration-to colonize the Moon, construct a Space Station, and mount a human mission to Mars-to less costly endeavors. Under creative management, the Mississippi team began to study the Nation's new priorities with the intention of becoming an integral part of the changing times. The Mississippi Test Facility (MTF-former name of SSC) diversified and brought in other Federal and State agencies to help share the cost of the Center and use of the developing technology. MTF personnel began looking for other customers, private and commercial, in addition to their new Government tenants. The men and women of the MTF were, in a real sense, reinventing Government over 25 years ago, long before that concept came into vogue. Way Station to Space takes the reader back through those interesting times and relates the story of how the small team evolved into a paradigm of engineering and scientific cooperation for others to follow. The MTF team recycled facilities and resources, turning part of the huge Center into a diverse environmental research center. The Stennis Space Center now serves as a model of multiagency synergy and is home to over 30 Federal and State agencies, universities, and private industries. This new addition to the NASA history series also illustrates how the men and women of this south Mississippi facility met challenges head-on. They not only preserved their installation, but they built a new foundation for the future. As a result in 1996, the Stennis Space Center was officially designated as NASA's Lead Center for rocket propulsion testing and in 1997 as the Lead Center for Commercial Remote Sensing. Way Station to Space is not only the history of one of NASA's Centers, it is also an allegory of the Center's relationship to the local communities in Mississippi and Louisiana, its sister Centers, and to NASA Headquarters. Not only does this book tell an interesting story about the Stennis Space Center and NASA's first decades of space exploration, it also offers a guide to the changing times ahead as we approach the new millennium. Perhaps just as importantly, Way Station to Space captures the true spirit of NASA that abides with us today as we meet the challenges of tomorrow.

Apollo in Perspective Jonathan Allday, 2018-02-06 Apollo in Perspective: Spaceflight Then and Now takes a retrospective look at the Apollo space program and the technology that was used to land a man on the Moon. Using simple illustrations and school-level mathematics, Jonathan Allday explains the basic physics and technology of spaceflight and conveys the huge technological strides that were made and the dedication of the people working on the program. Physics topics covered include the laws of motion,

rocketry, how to maneuver in orbit, and more. Informal and engaging, the book also discusses the designs of the Apollo Command, Service and Lunar modules and how these changed as the plans for the manned mission evolved. Guidance systems, computers, and engines all had to be developed for the first time. With Apollo as background, the book proceeds to look at the space shuttle, the technology being developed for its replacement, the International Space Station, and the possibilities for a manned Mars mission. The book concludes with an exploration of the far future, including Mars colonies and journeys to other stars.

The Art of NASA Piers Bizony, 2020-10-06 Formed in 1958, NASA has long maintained a department of visual artists to depict the concepts and technologies created in humankind's quest to explore the final frontier. Culled from a carefully chosen reserve of approximately 3,000 files deep in the NASA archives, the 200 artworks presented in this large-format edition provide a glimpse of NASA history like no other. **A 2021 Locus Award Winner** From space suits to capsules, from landing modules to the Space Shuttle, the International Space Station, and more recent concepts for space planes, The Art of NASA presents 60 years of American space exploration in an unprecedented fashion. All the landmark early missions are represented in detail—Gemini, Mercury, Apollo—as are post-Space Race accomplishments, like the mission to Mars and other deep-space explorations. The insightful text relates the wonderful stories associated with the art. For instance, the incredibly rare early Apollo illustrations show how Apollo might have looked if the landing module had never been developed. Black-and-white Gemini drawings illustrate how the massive NASA art department did its stuff with ink pen and rubdown Letraset textures. Cross-sections of the Apollo–Soyuz Test Project docking adapter reveal Russian sensitivity about US “male” probes “penetrating” their spacecraft, thus the androgynous “adapter” now used universally in space. International Space Station cutaways show how huge the original plan was, but also what was retained. Every picture in The Art of NASA tells a special story. This collection of the rarest of the rare is not only a unique view of NASA history—it's a fascinating look at the art of illustration, the development of now-familiar technologies, and a glimpse of what the space program might have looked like.

NASA Cristina T. Chaplain, 2011-04 NASA has long relied on the Delta II medium class launch vehicle (MCLV) to launch science missions. Delta II, however, is no longer in production, and no other vehicle in the relative cost and performance range is currently certified for NASA use. This report assessed: (1) NASA's and the contractor's steps to ensure resources are available to support safe Delta II oper. through 2011; (2) NASA's plans and contingencies for ensuring a smooth transition from current small and MCLV to other launch vehicles; (3) the risks associated with NASA's planned approach to fill the MCLV capability gap; and (4) technical and programmatic implications if NASA commits to new launch vehicles before they are certified and proven. Illustrations. A print on demand report.

Building a Better NASA Workforce National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Meeting the Workforce Needs for the National Vision for Space Exploration, 2007-07-22 The Vision for Space Exploration (VSE) announced by President George W. Bush in 2004 sets NASA and the nation on a bold path to return to the Moon and one day put a human on Mars. The long-term endeavor represented by the VSE is, however, subject to the constraints imposed by annual funding. Given that the VSE may take tens of years to implement, a significant issue is whether NASA and the United States will have the workforce needed to achieve that vision. The issues range from short-term concerns about the current workforce's skills for overseeing the development of new spacecraft and launch vehicles for the VSE to long-term issues regarding the training, recruiting, and retaining of scientists and engineers in-house as well as in industry and academia. Asked to explore science and technology (S&T) workforce needs to achieve the nation's long-term space exploration, the Committee on Meeting the Workforce Needs for the National Vision for Space Exploration concluded that in the short term, NASA does not possess the requisite in-house personnel with the experience in human spaceflight systems development needed to implement the VSE. But the committee acknowledges that NASA is cognizant of this fact and has taken steps to correct it, primarily by seeking to recruit highly skilled personnel from outside NASA, including persons from industry and retirees. For the long term, NASA has to ask if it is attracting and developing the talent it will need to execute a mission to return to the Moon, and the agency must identify what it needs to do to attract and develop a world-class workforce to explore other worlds. A major challenge for NASA is reorienting its human spaceflight workforce from the operation of current vehicles to the development of new vehicles at least throughout the next decade, as well as starting operations with new rockets and new spacecraft. The committee emphasizes further that when evaluating its future workforce requirements, NASA has to consider not only programs for students, but also training opportunities for its current employees. NASA's training programs at the agency's various field centers, which are focused on NASA's civil service talent, require support to prevent the agency's internal skill base from withering. Furthermore, NASA faces the risk that, if it fails to nurture its own internal workforce, skilled personnel will be attracted to other government agencies and industry. **Building a Better NASA Workforce: Meeting the Workforce Needs for the National Vision for Space Exploration** explains the findings and recommendations of the committee.

Assessment of Options for Extending the Life of the Hubble Space Telescope National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on the Assessment of Options for Extending the Life of the Hubble Space Telescope, 2005-03-28 The Hubble Space Telescope (HST) has operated continuously since 1990. During that time, four space shuttle-based service missions were launched, three of which added major observational capabilities. A fifth "SM-4" was intended to replace key telescope systems and install two new instruments. The loss of the space shuttle Columbia, however, resulted in a decision by NASA not to pursue the SM-4 mission leading to a likely end of Hubble's useful life in 2007-2008. This situation resulted in an unprecedented outcry from scientists and the public. As a result, NASA began to explore and develop a robotic servicing mission; and Congress directed NASA to request a study from the National Research Council (NRC) of the robotic and shuttle servicing options for extending the life of Hubble. This report presents an assessment of those two options. It provides an examination of the contributions made by

Hubble and those likely as the result of a servicing mission, and a comparative analysis of the potential risk of the two options for servicing Hubble. The study concludes that the Shuttle option would be the most effective one for prolonging Hubble's productive life.

John Houbolt William F. Causey,2020-03-15 In May 1961, President Kennedy announced that the United States would attempt to land a man on the moon and return him safely to the earth before the end of that decade. Yet NASA did not have a specific plan for how to accomplish that goal. Over the next fourteen months, NASA vigorously debated several options. At first the consensus was to send one big rocket with several astronauts to the moon, land and explore, and then take off and return the astronauts to earth in the same vehicle. Another idea involved launching several smaller Saturn V rockets into the earth orbit, where a lander would be assembled and fueled before sending the crew to the moon. But it was a small group of engineers led by John C. Houbolt who came up with the plan that propelled human beings to the moon and back—not only safely, but faster, cheaper, and more reliably. Houbolt and his colleagues called it “lunar orbit rendezvous,” or “LOR.” At first the LOR idea was ignored, then it was criticized, and then finally dismissed by many senior NASA officials. Nevertheless, the group, under Houbolt’s leadership, continued to press the LOR idea, arguing that it was the only way to get men to the moon and back by President Kennedy’s deadline. Houbolt persisted, risking his career in the face of overwhelming opposition. This is the story of how John Houbolt convinced NASA to adopt the plan that made history.

Safe Is Not An Option Rand Simberg,2014-04-10 The history of exploration and establishment of new lands, science and technologies has always entailed risk to the health and lives of the explorers. Yet, when it comes to exploring and developing the high frontier of space, the harshest frontier ever, the highest value is apparently not the accomplishment of those goals, but of minimizing, if not eliminating, the possibility of injury or death of the humans carrying them out. For decades since the end of Apollo, human spaceflight has been very expensive and relatively rare (about 500 people total, with a death rate of about 4%), largely because of this risk aversion on the part of the federal government and culture. From the Space Shuttle, to the International Space Station, the new commercial crew program to deliver astronauts to it, and the regulatory approach for commercial spaceflight providers, our attitude toward safety has been fundamentally irrational, expensive and even dangerous, while generating minimal accomplishment for maximal cost. This book entertainingly explains why this means that we must regulate passenger safety in the new commercial spaceflight industry with a lighter hand than many might instinctively prefer, that NASA must more carefully evaluate rewards from a planned mission to rationally determine how much should be spent to avoid the loss of participants, and that Congress must stop insisting that safety is the highest priority, for such insistence is an eloquent testament to how unimportant they and the nation consider the opening of this new

Launching Science National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Space Studies Board,Committee on Science Opportunities Enabled by NASA's Constellation System,2009-03-12 In January 2004 NASA was given a new policy direction known as the Vision for Space Exploration. That plan, now renamed the United States Space Exploration Policy, called for sending human and robotic missions to the Moon, Mars, and beyond. In 2005 NASA outlined how to conduct the first steps in implementing this policy and began the development of a new human-carrying spacecraft known as Orion, the lunar lander known as Altair, and the launch vehicles Ares I and Ares V. Collectively, these are called the Constellation System. In November 2007 NASA asked the National Research Council (NRC) to evaluate the potential for new science opportunities enabled by the Constellation System of rockets and spacecraft. The NRC committee

evaluated a total of 17 mission concepts for future space science missions. Of those, the committee determined that 12 would benefit from the Constellation System and five would not. This book presents the committee's findings and recommendations, including cost estimates, a review of the technical feasibility of each mission, and identification of the missions most deserving of future study.

From NYC Lower East Side To NASA Satellite Operations Manager Ralph Shapiro,2012-09-21 What was life like growing up on the Lower East Side of NYC during the Great Depression? Can you imagine it? For adults, of course, it was harsh; for a young boy like me, born in 1924, it was not as bad as you think. I actually had fun playing sports and games you probably never heard of. Learn about them. My vivid recollection paints a broad view of the Lower East Side for you to see what it was like: social activity, sports activity, bread lines, patriotism, politics, professional sports interest—compare it to your experiences. I was fortunate not to be hungry for food but hungry to experience the wonders of our country. Learn how I broke out of the Lower East Side shell. A college education was hardly a goal among the youth in my community, but I made it at a young age, graduating from the City College of NY at twenty. I had five industrial engineering jobs, hardly the experience that would prepare me to manage NASA satellites operations. It did not, but by a quirk, I became operations manager of a series of NASA weather satellites called Nimbus, research satellites that provided many benefits to society you would be interested in learning about. So why not also learn how satellites operate? I describe that in simple terms. Of course this book is my life story—my story of raising a family, having a productive career, paying back to society through volunteerism while keeping close to Judaism, and enjoying my senior years while still being productive at consulting work.
