Earth and Space Nirmala Nataraj, 2015-10-13 “[A] glorious, pictorial tour of the universe . . . beginning with photos depicting Earth from space and progressing through . . . the individual planets.” —School Library Journal Preface by Bill Nye Take a tour of the universe with this breathtaking collection of photographs from the archives of NASA. Astonishing images of Earth from above, the phenomena of our solar system, and the celestial bodies of deep space will captivate readers and photography lovers with an interest in science, astronomy, and the great beyond. Each extraordinary photograph from the legendary space agency is paired with explanatory text that contextualizes its place in the cosmic ballet of planets, stars, dust, and matter—from Earth’s limb to solar flares, the Jellyfish Nebula to Pandora’s Cluster. Featuring a preface by Bill Nye, this engaging ebook offers up-close views of our remarkable cosmos, and sparks wonder at the marvels of Earth and space. “Delve into the great beyond with these awe-inspiring photos from NASA’s archive.” —Entertainment Weekly “Puts some of our most magnificent space imagery in context, and it’s enough to make anyone feel like just the tiniest little speck of stardust.” —BuzzFeed

The Sun Beth Alesse, 2019-06-14 The Sun: Images from Space has extraordinary images of beauty with over 130 incredible details of our Sun taken from space. These images come from Solar Dynamics Observatory (SDO) Mission instruments in conjunction with other various instruments such as those on the Mars Rover. Our Sun, a yellow dwarf star, is the main source of energy for life on Earth. Life grows and thrives because of it. The sun is at the middle of our solar system. Yet until recently, we have not been able to see much of it or even observe its basic characteristics because of its blinding electromagnetic energy. Taken from space, these images were assembled using data collected by NASA and their partners showing our Sun as has not been revealed to us here on Earth, 93 million miles away. See the coronal mass ejections, electric currents, magnetic fields, solar wind, photosphere the chromosphere, the corona, and the hot plasma soup.

The Earth Beth Alesse, 2018-06-15 Earth From Space: A Visual Tour is a book with a collection of over 180 gorgeous images compiled from instrument data of NASA and their world-class collaborators. Some of these instruments are sensitive to the visual range of the electromagnetic spectrum. Other instruments record other wavelengths such as ultraviolet and infrared. Colors are assigned to portions of data to make images that portray our Earth with visual imagery. Details of the Earth from above show forest fires, floods, hurricanes, parks, cloud formations, the great cities of the world, sleepy backwaters, reefs, oceans, glaciers, snow capped mountains, archaeological sites, and transportation highways. Our understanding is transformed as we can truly see events like algae blooms, carbon emissions, crop health, volcanic eruptions, and more. The images in this book are beautiful and genuinely artful. Images of Earth from space are shaping our current ideas, beliefs, and perspectives and pointing the way to our future.

NASA Space Photos Frank Fontana, Suzanne E. Johnson, 2007 Includes 151 historic NASA pictures, including photographs of the Apollo flights, rockets, astronauts, planets, moons, stars, galaxies, nebulae, and deep space as captured by the Hubble Space Telescope.

Hubble in Space, 2018-04-15 Hubble Images from Space: a Virtual Tour is a curated book of images from the Hubble telescope collected using space-based instruments from 1990 to 2017. This amazing selection contains new images of space and classic Hubble favorites. All the major players of space are represented in this colorful array of images: planets, moons, comets, exoplanets, solar systems, stars, supernovas, the Milky Way, galaxies, black holes, nebulae, and more. Experience the near and far of our universe, evidence of its primordial beginnings, its vastness, and a great variety of evidence of stellar and galactic evolution through these awe inspiring colorful images.

The Planets Nirmala Nataraj, 2017-11-07 “Might be just the book to bring out your inner astronomer . . . over 250 pages of breathtaking images from the past 50 years of NASA’s space exploration.” —Parade Preface by Bill Nye This magnificent volume offers a rich visual tour of the planets in our solar system. More than two-hundred breathtaking photographs from the archives of NASA are paired with extended captions detailing the science behind some of our cosmic neighborhood’s most extraordinary phenomena. Images of newly discovered areas of Jupiter, fiery

volcanoes on Venus, and many more reveal the astronomical marvels of space in engrossing detail. Anyone with an interest in science, astronomy, and the mysteries of the universe will delight in this awe-inspiring guide to the wonders of the solar system. "As you turn through the pages, you're hit with true moments of awe, photos that remind you the power of nature extends beyond our own planet." —Houston Chronicle "Breathtaking pictures show the otherworldly magic of the solar system . . . The images are at once humbling and uplifting: Here in the black void of space is Saturn's frozen moon, Mimas, white and pitted like a galactic golf ball; here is the tiny golden orb called Io, casting a shadow in a perfect inky circle on the marbled surface of Jupiter; here is the great sun, flames spurting from its surface like plumes." —The Wall Street Journal "[A] gorgeous photographic tour of space . . . The collection is a remarkable reminder of how much has been learned about the planets over the past few decades, solving many mysteries yet introducing many more." —Publishers Weekly

The Moon Beth Alesse, 2019-08-15 The Moon: NASA Images from Space, includes images from the National Aeronautics and Space Administration (NASA), European Space Agency (ESA), and other international space explorations. Early images show the very first Apollo missions to the Moon using film in a Hasselblad camera. NASA illustrations explain the Moon's tidal forces on the Earth's oceans, seas, and land mass, the Moon's phases as seen from Earth, the lunar geography, and Moon's composition. This book shows detailed maps of the Moon's surface: its incredible craters, ancient lava flows, plains, seas, and mountains. Included is speculation about the Moon's origin and its historical place in our solar system. Humanities future plans for lunar exploration and habitation are discussed. Can humans live there, and how? This book is a comprehensively illustrated collection of lunar visuals of over 150 images

NASA Kennedy Space Center Mark A. Chambers, 2016-02-15 From Bumper V-2 rocket launches in 1950 to the launch of the Orion spacecraft atop a Delta IV rocket in 2014, NASA's Kennedy Space Center has served as the nation's portal to outer space for over 60 years. Images of Modern America: NASA Kennedy Space Center provides a fascinating look at the evolution of spacecraft technology and vintage images of Florida's scenic Merritt Island, known as the "Space Coast." This photographic history of the nation's premier spaceport looks back at the United States' glorious past in space exploration and ahead to its future.

Life on Mars 3 Michael G. Hunter, 2013-08-28 Michael G. Hunter is a student of many fields. A licensed California architect and certified astrologer, he studies anthropology, astronomy, archaeology, paleontology, and mysteries of all sorts. Looking at what others have overlooked, he explores and reveals answers to unsolved mysteries, by simply observing and analyzing available material.

Moonshots Piers Bizony, 2017-10-01 Moonshots presents stunning photos of space and Earth from NASA's archives - taken by Gemini, Apollo, Space Shuttle, and ISS astronauts using high resolution Hasselblad cameras. In December 1968, the crew of Apollo 8 captured images depicting Earth hanging like a lonely fruit in the vast darkness of space. The social and spiritual shock of that photograph—and those which followed—never fully diminished, even as Apollo missions followed at an incredible pace, including the first lunar landing on July 20, 1969. Moonshots is the definitive photographic chronicle of NASA space exploration—a giant slipcased book featuring more than 200 remarkable photographs from that eventful era created almost exclusively on large-format Hasselblad cameras. Though a number of these images have been reproduced in books and magazines over the years, one attribute of this incredible collection has seldom been exploited: the sheer size and resolution of the photography. Aerospace author Piers Bizony scoured NASA's archives of Hasselblad film frames to assemble the space fan's ultimate must-have book—a gorgeous large-format hardcover presented in a heavy slipcase with die-cuts to represent the phases of the moon. This resulting volume extracts a stunning selection of photographs captured by astronauts using Hasselblad equipment, many of them seldom previously published, let alone in such a lavish package. The Apollo voyages form the centerpiece of this amazing collection, but equally fabulous images from precursor Gemini missions are also featured, along with later photographs chronicling

Space Shuttle missions and even the construction of the International Space Station.

The Planet Mars Amherst Media, Incorporated, 2020-02-15

Life on Mars 2 Michael G. Hunter, 2013-02-07 Life on Mars showed that there is indeed, life on the fourth planet from the Sun. This second book digs even deeper into the animal and human life on the red planet, uncovering and demonstrating further evidence, analysis, and knowledge, from NASA's Mars photos. This book is a must read for anyone, ages teen and up, including amateur stargazers, ufologists, doomsday preppers, survivalists, geeks and nerds, and students of science, astronomy, life forms, archaeology, anthropology, and ancient history.

Politics and Space Mark E. Byrnes, 1994-10-26 Government agencies have tended to attempt to project favorable public images of themselves as a method of building the public support they need to survive, all the more so in times of increasingly sophisticated communications and decreasingly available financial resources. This study analyzes NASA's efforts to build political support through its public image. Throughout its tumultuous history, the space agency has carefully tailored its use of basic images: nationalism (during the Mercury era), romanticism (during the Apollo era), and pragmatism (during the Shuttle era)--to fit its prevailing political circumstances. This in-depth study will be of keen interest to scholars in political science and political communication.

Earth at Night National Aeronautics and Space Administration, 2023-12-26 Dazzling photographs and images from space of our planet's nightlights have captivated public attention for decades. In such images, patterns are immediately seen based on the presence or absence of light: a distinct coastline, bodies of water recognizable by their dark silhouettes, and the faint tendrils of roads and highways emanating from the brilliant blobs of light that are our modern, well-lit cities. For nearly 25 years, satellite images of Earth at night have served as a fundamental research tool, while also stoking public curiosity. These images paint an expansive and revealing picture, showing how humans have illuminated and shaped the planet in profound ways since the invention of the light bulb 140 years ago.

Stargazing Nirmala Nataraj, 2019-09-03 A compendium of images of the night sky, the perfect gift for stargazers, space lovers, science geeks, photography lovers, and NASA fans. This collection of photographs illuminates the darkness of space in a whole new way. Images from the archives of NASA reveal the night sky's most extraordinary phenomena, from the radiant aurora borealis to awe-inspiring lunar eclipses. Each breathtaking photo is paired with an informative caption about the scientific phenomena it reveals and the technology used to capture it. Featuring a preface by author and Emmy award-nominated TV host Bill Nye, this ebook will rekindle the wonder of looking up at the stars. "[A] gorgeous photographic tour of space . . . Spaceshots and Snapshots of Projects Mercury and Gemini John Bisney, J. L.

Pickering, 2016-04-25 The race to space between the United States and the Soviet Union captured the popular imagination. On April 12, 1961, the USSR launched cosmonaut Yuri Gagarin on a one-orbit flight, making him the first human in space. Three weeks later, American astronaut Alan B. Shepard Jr. flew 116 miles above Earth before splashing down in the Bahamas. Over the next twenty years astronauts emerged as national heroes. This book tells the story of the people and events of Projects Mercury and Gemini with hundreds of unpublished and rare photographs—both color and black-and-white. Unlike other publications, which illustrate the space race with well-known and easily accessible images, this history draws from the authors' private library of over one hundred thousand (and growing) high-quality photos of the early US manned space program. Collected over a lifetime from public and private sources—including NASA archives, fellow collectors, retired NASA and news photographers, and auction houses—the images document American space missions of the Cold War era more comprehensively than ever before. Devoting a chapter to each flight, the authors also include detailed descriptions, providing new insight into one of America's greatest triumphs.

My Life in Space William B. Green, 2009-05 My Life in Space: The Story Behind NASA's Amazing Pictures of the Planets by award winning author William B. Green presents a compilation of intimate and revealing anecdotes that take the reader deep behind the scenes of the famous space agency's

unmanned missions to reveal the methods, techniques, and personalities responsible for NASA's rich and spectacular collection of pictures of the planets and beyond. With more than twenty years' experience managing teams working on various unmanned space missions, author Green brings a rare, insider's look into the inner-workings of one of the world's most comprehensive efforts to document our solar system, its planets, moons, and the universe. With almost sixty illustrations, including dramatic photographs taken by NASA spacecraft over the past four decades, and photos taken in many of the operations areas supporting the historic space missions, *My Life in Space* promises surprises with every turn of the page.

Moonshots and Snapshots of Project Apollo John Bisney, J. L. Pickering, 2016-04-25 Winner of the Bronze Medal for Science in the 2016 Independent Publisher (IPPY) Book Awards In this companion volume to John Bisney and J. L. Pickering's extraordinary book of rare photographs from the Mercury and Gemini missions, the authors now present the rest of the Golden Age of US manned space flight with a photographic history of Project Apollo. Beginning in 1967, *Moonshots and Snapshots of Project Apollo* chronicles the program's twelve missions and its two follow-ons, Skylab and the Apollo-Soyuz Test Project. The authors draw from rarely seen NASA, industry, and news media images, taking readers to the Moon, on months-long odysseys above Earth, and finally on the first international manned space flight in 1975. The book pairs many previously unpublished images from Pickering's unmatched collection of Cold War-era space photographs with extended captions—identifying many NASA, military, and contract workers and participants for the first time—to provide comprehensive background information about the exciting climax and conclusion of the Space Race.

Infinite Worlds Michael Soluri, 2014-11-04 A stunning, unprecedented collection of photographs and essays that goes behind the scenes at NASA, in which the humanity of the astronauts, engineers, scientists, technicians, and ground crews that contributed in saving the Hubble Space Telescope are revealed. Michael Soluri has been photographing the people and places of space exploration for more than fifteen years. With the support of *Discover* magazine, NASA, and the astronaut crew, he was able to gain unfettered access to the multiple worlds of the historic, one-of-a-kind shuttle mission and tools that saved the Hubble Space Telescope. His friendship with the crew grew out of a chance meeting with Mike Massimino, one of the seven astronauts selected for the last-ever servicing mission to the Hubble. Intrigued by the possibilities, Soluri asked Massimino: "What is the quality of light really like in space?" While astronauts take photos in space all the time, Soluri was asked to coach this crew into making photographs that better communicate their experiences in space the way an artist does: as expressions of human curiosity and ambition, and the infinite worlds to which humankind aspires in exploring the universe. *Infinite Worlds* is an exclusive and unscripted photographic documentary inside the world of three NASA flight centers in Maryland, Texas, and Florida. With the closing of the shuttle program, this is the first and last book of its kind. Designed with more than 400 gorgeous full-color and black & white photographs, it is woven with essays written by eighteen individuals from the human and robotic spaceflight labor force that participated in STS 125/SM4. *Infinite Worlds* will appeal not only to the space history buff and photography connoisseur, but also to the armchair astronomer, and families wanting an insightful and beautiful keepsake of the space shuttle and Hubble Space Telescope era.
