Near Misses Usn (Ret) Lcdr Paul Allen Riley,2011-03 The book begins in a small town setting where aviation has earned a bad name because of an avoidable fatal crash. It is autobiographical only in the sense of the author's progression from non-interest to intense involvement in all aspects of flying. The title *Near Misses* describes close calls as well as choices that determined final outcomes. The highlights of an aspiring Naval Aviator's struggle to become a fighter pilot are revealed. Along the way, bits of historical and technical information are included The main theme is that anyone attempting the same task could benefit by either avoiding the pitfalls described or by being prepared to compensate for them in ways similar to those of the author.

Punk's War Ward Carroll,2014-03-15 *Punk's War* reveals the inner workings of the Navy as only an insider can. An authentic and riveting thriller, it is a highly acclaimed novel of a fighter pilot's experiences in the era just before 9/11. As the U.S. military currently enters another post-conflict period, the themes of leadership during crisis and accomplishing the mission make *Punk's War* more relevant than ever.

British Naval Aviation Tim Benbow,2016-05-23 In 1909 the British Admiralty placed an order for a rigid airship, marking the beginning of the Royal Navy's involvement with airpower. This collection charts the Navy's involvement with aviation over the following century, and the ways in which its rapid expansion and evolution radically altered the nature of maritime power and naval strategy. Drawing on much new historical research, the collection takes a broadly chronological approach which allows a scholarly examination of key themes from across the history of British naval aviation. The subjects tackled include long-standing controversies over the control of naval air power, crucial turning points within British defence policy and strategy, the role of naval aviation in limited war, and discussion of campaigns - such the contribution of the Fleet Air Arm in the Mediterranean and Pacific theatres of the Second World War - that have hitherto received relatively little attention. The collection concludes with a discussion of recent debates surrounding the Royal Navy's acquisition of a new generation of carriers, setting the arguments within an historical context. Taken as a whole the volume offers fascinating insights into the development of a key aspect of naval power as well as shedding new light on one of the most important aspects of Britain's defence policy and military history. By simultaneously addressing historical and current political debates, it is sure to find a ready audience and stimulate further discussion.

Celestial Fire Larry James Stevens,2005-06-01 **BOOK THEME:** A two-part (rational & mystical) life

guide. *Celestial Fire ~ A Naval Aviator's Spiritual Odyssey* is the true story of a Vietnam Navy pilot and his Samadhi heart-connection achieved after a thirty-year quest to uncover the mysteries (greater meaning) behind paranormal phenomena, and the truth of Divine Intervention. It's a love story of the highest order, as our lonely, emotionally-dysfunctional warrior surviving one extraordinary life-extending event after another finally learns to let go of LOVE and thereby exchange his bear gun for a bear hug. Larry's narration of his relentless pursuit of worthiness and cosmic communion, which culminated in a mountaintop Kundalini in 1996, is not only about the eclectic transformation of ONE individual. *Celestial Fire* is a powerful guide to actualizing unlimited, preexisting wholeness and potential located within EVERY Human Being. Drawing from the latest in psychological (head) and mystical (heart) schools, his book presents a thorough, multi-level, NEW THOUGHT examination of how we function (Holographic Psychology), along with a practical, testable, mystical practice helpful in stimulating Spiritual DNA: an individual's unique life blueprint. Larry's dual-hemisphere blending of Science and Spirit provides a clear and concise roadmap to gloriously expanded awareness, deeply penetrating (fearless) relationships, and an unprecedented Earth wake-up mastery that's user-friendly for both believer and skeptic alike.

Russian Aviation and Air Power in the Twentieth Century John Greenwood, Von Hardesty, Robin Higham, 2014-06-11 In the light of new archival material the editors take a fresh look at Russian aviation in the twentieth century. Presenting a comprehensive view of Russian aviation, from its genesis in the late czarist period to the present era, the approach is essentially chronological with a major emphasis on the evolution of military aviation. The contributions are diverse, with appropriate attention to civilian and institutional themes.

Selling Air Power Steve Call, 2009-03-01 In *Selling Air Power*, Steve Call provides the first comprehensive study of the efforts of post-war air power advocates to harness popular culture in support of their agenda. In the 1940s and much of the 1950s, hardly a month went by without at least one blatantly pro-air power article appearing in general interest magazines. Public fascination with flight helped create and sustain exaggerated expectations for air power in the minds of both its official proponents and the American public. Articles in the *Saturday Evening Post*, *Reader's Digest*, and *Life* trumpeted the secure future assured by American air superiority. Military figures like Henry H. Hap

Arnold and Curtis E. LeMay, radio-television personalities such as Arthur Godfrey, cartoon figures like Steve Canyon, and actors like Jimmy Stewart played key roles in the unfolding campaign. Movies like *Twelve O'Clock High!*, *The Court-Martial of Billy Mitchell*, and *A Gathering of Eagles* projected onto the public imagination vivid images confirming what was coming to be the accepted wisdom: that America's safety against the Soviet threat could best be guaranteed by air power, coupled with nuclear capability. But as the Cold War continued and the specter of the mushroom cloud grew more prominent in American minds, another, more sinister interpretation began to take hold. Call chronicles the shift away from the heroic, patriotic posture of the years just after World War II, toward the threatening, even bizarre imagery of books and movies like *Catch-22*, *On the Beach*, and *Dr. Strangelove*. Call's careful analysis goes beyond the public relations campaigns to probe the intellectual climate that shaped them and gave them power. *Selling Air Power* adds a critical layer of understanding to studies in military and aviation history, as well as American popular culture.

'NIGHTHAWK THE ROGUE CORSAIR' Floyd Dunlap, 2012-02-27 A fictional suspense novel containing an interracial relationship, a military aviation theme with Police and Investigative, and a surprise conclusion.

Spindrift Dan Gillcrist, Robert Gillcrist, Dan Robert, Paul Gillcrist, 1998 *Spindrift* is a collection of true seagoing anecdotes about the experiences of three brothers, each of whom served aboard U.S. Navy ships during his service. One of the authors was a Torpedoman Second Class on U.S.S. *Barbero*, a guided missile diesel submarine in the early 1950s. The second author served as a seagoing Marine Corporal aboard the aircraft carrier, U.S.S. *Wasp* during the 1960s. The third author, a career Naval Aviator, served aboard a number of aircraft carriers over a 33 year career ultimately retiring as a Rear Admiral. The three authors present to the reader three different perspectives and three different writing styles about three different periods in the history of the U.S. Navy. The perspectives are the submarine service, the seagoing Marine Corps aspects of life aboard an anti-submarine warfare aircraft carrier and the attack carrier Navy. The book is divided into four parts: the first deals with life aboard diesel submarines in the 1950s as well as nuclear-powered submarine operations in the 1970s. The torpedoman, Dan and his aviator brother, Paul provide the anecdotes in this part. Part II deals with surface ships operations over a thirty year period (1952-1982) and is written exclusively by brother, Paul, the aviator. Part III deals with aspects of aircraft carrier operations over the same thirty year period and is written by the Marine, Bob and his aviator brother, Paul. Part IV deals with women in Naval Aviation and the anecdotes contained therein come from the experiences of the aviator. The

subject matter of the anecdotes ranges from the sublime to the ridiculous ... interspersing humor with adventure, and excitement with introspection. The underlying theme of the stories stresses the notion that the sea services seem to contain more than their share of genuine, all-American characters.

Maritime Unmanned Ernest M Snowden, Robert F Wood, 2021-10-15 *Maritime Unmanned* recounts the promising beginning, demoralizing setbacks, and ultimate success of the visionaries who championed unmanned aircraft systems (UAS) technology for the U.S. Navy. Ernest Snowden and Robert F. Wood Jr. dive deep inside the machinations of aerospace and defense industry leadership, strategy development, and execution to describe the process by which the Air Force's Global Hawk was adapted to become the Navy's Triton. This was the first time in the history of naval aviation that an unmanned aerial vehicle was adopted into frontline squadron inventories to become an enabling component of the maritime patrol and reconnaissance mission, a process that took more than twenty years as industry representatives and Navy counterparts developed and socialized an unfamiliar and unconventional concept of operations and senior government acquisition officials either advocated or purposely road-blocked its advancement. —Military Writers Society of America Award: Bronze Medal

Doc Lucas USN Blair Beebe, 2010-06-17 Blair Beebe, M.D. Medical lessons from Vietnam; what did we learn? Almost fifty years after the beginning of American involvement in the Vietnam War, we still remain embroiled in military actions that generate disease, disability, and death. Frontline physicians who were in places like Afghanistan, Iraq, Bosnia, Herzegovina, and Vietnam faced the medical consequences of war every day. My new novel, *Doc Lucas USN*, based on real people and real events, brings the war down to a human scale, one person at a time. History gives us statistics and dates, but fiction helps us to better understand the meaning behind those facts. One of my old professors defined history as lies we tell about dead people. We understand more from reading Homer, Sophocles, Shakespeare, Margaret Mitchell, and Stephen Ambrose than we ever learned from dry history textbooks. Paradoxically, the truth comes out in fiction. During my time in Vietnam, and for many years after, I listened to stories from other physicians who served during the war and from naval aviators and marines who faced combat every day. I also heard different points of view from Vietnamese civilians who had come to America to escape the chaos after the war. Their eyewitness accounts are the true history, but unless someone writes them down, we lose them forever. Moreover, individual stories may have little meaning to us if they lack context. I've often heard both veterans and civilians say, I don't talk about my experiences, because anyone who wasn't there could never understand how bad it was. That's why we need a novel to give us a complete account in an organized

way. Each character and each scene moves the action to develop a central theme about the war. We want more than anecdotes. We want to understand the how and the why of the unfolding tragedy. Doc Lucas not only recounts the stories, he lives them. We feel his anxiety, his terror, and at times, his joy. When things go wrong, we know why, and we can feel his despair. In the good times, and there are many, we laugh along with him. In the end, Doc Lucas learns important lessons about himself and his values centered on human rights and the relief of suffering. He emerges from the war better equipped to take his place with stronger convictions about his role in his society.

Wingless Eagle Herbert A. Johnson, 2003-04-03 At the start of the twentieth century the United States led the world in advances in aviation, with the first successful engine-powered flights at Kitty Hawk, North Carolina, and Dayton, Ohio, beginning in 1903. Fifteen years later, however, American airmen flew European-designed aircraft because American planes were woefully inadequate for service on the Western Front. Why was the United States so poorly prepared to engage in aerial combat in World War I? To answer this question, Herbert Johnson takes a hard look at the early years of U.S. military aviation, exploring the cultural, technical, political, and organizational factors that stunted its evolution. Among the recurring themes of Johnson's narrative are the damaging effects of a chronic lack of governmental funding for military aeronautics and the disruptive influence of a civilian aeronaut constituency both on military discipline and on public and Congressional attitudes toward army aviation. In addition, the Wright brothers' patent litigation hindered the technical development of American aircraft and crippled the domestic aviation industry's manufacturing capacity. Wartime experience helped correct some of these problems, but the persistence of others left the postwar Air Service with an uncertain and stormy future.

Soviet Naval Forces And Nuclear Warfare James J Tritten, 2019-06-26 Based on formal content analysis of the writings of Admiral Sergei G. Gorshkov and past Soviet ministers of defense and heads of the Politburo, James J. Tritten interprets what the Soviets say they will do in the event of nuclear war. He then constructs a hardware and exercise analysis of the strategic employment of the Soviet Navy in a nuclear war, offering three possible cases—the a bolt from the blue, with existing forces on patrol; full mobilization; and a plausible case of partial mobilization. In addition, Dr. Tritten examines, from a Soviet perspective, concepts of deterrence, the strategic goals and missions of the fleet, nuclear targeting policy, the Sea Lines of Communication (SLOC) disruption mission, and the potential for tactical nuclear warfare limited to the sea. The author concludes by assessing the implications of Soviet politico-military planning for Western defense strategy and arms control.

Military Aviation of the First World War Alan Sutton, Alan C. Wood, 2017-04-21 - over 470 black-and-white photographs! This beautifully illustrated book provides details of every power that took part in Military aircraft activity during the First World War. The war was a global conflict with 57 nations involved but with aviation being in its infancy only eight nations had a major air arm to their fighting Services. The Allies: Britain, America, Italy, Belgium, France, and Russia and then the Central Powers comprising Germany and Austria - Hungary. The book covers the formation, establishment and wartime exploits of all the major air powers during the war, as well as providing thumbnail sketches of all the major aces for each country, giving full coverage to: The Allies: The Royal Flying Corps, The French Military Air Service, The United States Air Service, Aeronautica de Regio Esercito (Italy), The Belgian Air Arm, The Russian Imperial Air Services. The Central Powers: The Imperial German Air Service, and the Austro-Hungarian flying service However, smaller powers (at the time) like Australia, Canada and Japan as well as Portugal, Serbia, Romania and South Africa are all featured in this fascinating book.

Topgun: The Legacy Brad Elward, 2021-09-28 The history of air combat has seen one recurring theme--new tactics are learned in battle, forgotten or discarded when battle concludes, and relearned at great cost during the next war. This cycle continued into the 1960s, when America was drawn into the Vietnam War. Despite having a skill and equipment advantage, US Navy aircrews were faring poorly against North Vietnamese fighters. Air combat lessons learned during prior wars, and since forgotten or deemed inapplicable due to advances in technology, were once again relevant. TOPGUN, the Navy's Fighter Weapons School, was established in 1968 to teach Navy aircrews the core air combat tactics, to train others in those tactics, and to ensure that naval aviation never again forgot its lessons learned. TOPGUN: The Legacy provides a unique, detailed, and never-before-told history of the Navy Fighter Weapons School. Based on over 450 interviews with graduates, instructors, and commanding officers, and thousands of pages of archival documents, this definitive study covers the early history of air combat tactical development, the school's founding in 1968, and its progression throughout the decades to the present day. TOPGUN's programs, significant events that shaped the school, and its unique culture have made it a center of excellence and the leading fighter weapons school worldwide.

The Life and Loves of a United States Naval Aviator Harry Carter, 2012-10 After his graduation in 1941 from Canoga Park High School, Harry Carter wanted a career in aviation. He was accepted into the United States Navy as an aviation cadet and upon completion of flight training, became a

commissioned officer in the US Navy thus beginning his thirty-one-year career as a naval aviator and a commanding officer of three warships and service in a diplomatic post as the Naval Attaché to Pakistan. Full of vivid historical details and anecdotes, *The Life and Loves of a United States Naval Aviator* charts Carter's professional and personal journey in the air and on the sea and in foreign lands. Carter shares his experiences of flying out of England and the Azores during World War II and hurricane hunting in the Caribbean. He takes you through his wartime days as a surface line officer operating off the coast of Korea and Vietnam in destroyers, a carrier, and a fleet oiler. Carter, never one to turn down a pretty girl, met his match when, while attending a Navy program at the University of Southern California, he met and married the love of his life, Ellie. Carter returned to sea in command of the destroyer *Durant* and continued to have a career full of foreign intrigue and adventure-minus the ladies---until his retirement in 1973. Through four wars, several countries, and a lot of romance, Carter lived life to the fullest. *The Life and Loves of a United States Naval Aviator* combines history, humor, and reflection to reveal one man's extraordinary life.

Soviet Aircraft Industry Peter G Dancey, 2017-04-22 Soviet aircraft industry was an essential part of the USSR's campaign for global dominance in the twentieth century. Thanks to the thick fog of

secrecy that enveloped it throughout the Cold War, it has long inspired the fascination of analysts and enthusiasts in the West; until the collapse of the USSR in 1991, details of Soviet aircraft were often a matter of conjecture. This book aims to uncover fully the mystery surrounding this topic. Drawing on original and previously unpublished information obtained directly from the former USSR, Soviet Aircraft Industry examines the unique characteristics of Soviet-designed aircraft—particularly military types, which were the cause of great concern to the West. Further, by virtue of the industry’s central role throughout Soviet history, this book provides a rare and important perspective into the broader theme of Russia’s great communist experiment.
