**The Triple Asian Olympics – Asia Rising** J. A. Mangan, Sandra Collins, Gwang Ok, 2018-12-07

Realpolitik as a component of the Olympic Games held in East Asia has been largely ignored by historians. However, sport was an integral part of cultural diplomacy and the expression of national prowess for the three Games held in East Asia: 1964 Tokyo, 1988 Seoul and 2008 Beijing. It is time this was recorded. The Olympic Games had transformational political, economic and cultural effects for the host cities and countries. This also is a neglected topic. *The Triple Asian Olympics: Asia Rising* explores the realities of global transformation, regional ascendancy and metaphorical modernity of the East Asian Olympics and, by extension, East Asia. As the axis of global geo-political and economic power shifts to the East, analyzing the significance of the Olympic Games in East Asia becomes significant to an understanding the shifting nature of the nations of East Asia. The Triple Asian Games are harbingers of dramatic geopolitical change. This is the first study to record, confront and examine this contemporary phenomenon. For this reason, this unique collection promises to attract a wide readership. This book was originally published as a special issue of *The International Journal of the History of Sport*.

**South Korea's Webtooniverse and the Digital Comic Revolution** Brian Yecies, Ae-Gyung

Shim, 2021-04-09 This book investigates the meteoric rise of mobile webtoons – also known as webcomics – and the dynamic relationships between serialised content, artists, agencies, platforms and applications, as well as the global readership associated with them. It offers an engaging discussion of webtoons themselves, and what makes this new media form so compelling and attractive to millions upon millions of readers. Why have webtoons taken off, and how do users interact with them? Each of the case studies we explore raises interesting questions for both general readers and scholars of new media about how webtoons have become a modern form of popular culture. The book also addresses larger questions about East Asia's contributions to global popular culture and Asian society in general, as well as South Korea's rapid social and cultural transformation since the 1990s. This is a significant – and understudied – aspect of the new screen ecologies and their role in a new wave of media globalisation as we approach the end of the second decade of the 21st century.

**SEO Management** Véronique Duong,2020-01-02 Search Engine Optimization (SEO) is arguably the most significant tool that marketers have to push online content. As the hub of the computational engineering fields, SEO encompasses technical, editorial and link-building strategies, and is an integral part of our daily lives. As important as it is ubiquitous, SEO is needed for the development of a brand's website and online reputation. When a website is live, one of its priorities is to drive organic traffic towards it, in order to attract visibility. In order to achieve such an aim, many proactive measures must be put in place, advice followed and tips implemented. There should also be an understanding of the holistic connection between a website's HTML sources, content management system and its relationship with external websites too (SEO off-site). There are many different search engines in the world and depending on the international boundary, one web browser usually dominates the landscape. Google features prominently in SEO Management, but this book also goes into detail regarding Baidu SEO (China), Yandex SEO (Russia) and Naver SEO (South Korea). There is also guidance given on how to manage a SEO project.

**Cold War Cosmopolitanism** Christina Klein,2020-01-21 South Korea in the 1950s was home to a burgeoning film culture, one of the many “Golden Age cinemas” that flourished in Asia during the postwar years. *Cold War Cosmopolitanism* offers a transnational cultural history of South Korean film style in this period, focusing on the works of Han Hyung-mo, director of the era's most glamorous and popular women's pictures, including the blockbuster *Madame Freedom* (1956). Christina Klein provides a unique approach to the study of film style, illuminating how Han's films took shape within a “free world” network of aesthetic and material ties created by the legacies of Japanese colonialism, the construction of US military bases, the waging of the cultural Cold War by the CIA, the forging of regional political alliances, and the import of popular cultures from around the world. Klein combines nuanced readings of Han's sophisticated style with careful attention to key issues of modernity—such as feminism, cosmopolitanism, and consumerism—in the first monograph devoted to this major Korean director. *Nursing and Informatics for the 21st Century - Embracing a Digital World, 3rd Edition, Book 4*

Connie White Delaney, Charlotte Weaver, Joyce Sensmeier, Lisiane Pruinelli, Patrick Weber, 2022-04-28

In *Nursing in an Integrated Digital World that Supports People, Systems, and the Planet*, the leading-edge innovators in digital health applications, global thought leaders, and multinational, cooperative research initiatives are woven together against the backdrop of health equity and policy-setting bodies, such as the United Nations and the World Health Organization. As the authors prepared this book, the world is struggling with the core issues of access to care, access to needed medical equipment and supplies, and access to vaccines. This access theme is reflected throughout the policy and world health chapters with an emphasis on how this COVID-19 pandemic is exposing the fissures, divides, unfairness, and unpreparedness that are in play across our globe. Sustainability and global health policy are linked to the new digital technologies in the chapters that illustrate healthcare delivery modalities that nurse innovators are developing, leading, and using to deliver care to hard-to-reach populations for better population health. A trio of chapters focus on the underlying need for standards to underlie nursing care in order to capture the data needed to enable new science and knowledge discoveries. The authors give particular attention to the cautions, potential for harm, and biases that the artificial intelligence technologies of algorithms and machine learning pose in healthcare.

Additionally, they have tapped legal experts to review the legal statutes, government regulations, and civil rights law in place for patients' rights, privacy, and confidentiality, and consents for the United States, the United Kingdom, and the European Union. The book closes with a chapter written by the editors that envisions the near future—the impact that the new digital technologies will have on how care is delivered, expanding care settings into community and home, virtual monitoring, and patient generated data, as well as the numerous ways that nurses' roles and technology skill sets must increase to support the global goals of equal access to healthcare. *Nursing and Informatics for the 21st Century – Embracing a Digital World, 3rd Edition* is comprised of four books which can be purchased individually: Book 1: *Realizing Digital Health – Bold Challenges and Opportunities for Nursing* Book 2: *Nursing Education and Digital Health Strategies* Book 3: *Innovation, Technology, and Applied Informatics for Nurses* Book 4: *Nursing in an Integrated Digital World that Supports People,*

**Entrepreneurship in the Informal Economy** Mai Thi Thanh Thai,Ekaterina Turkina,2013-03-05

Although entrepreneurship in the informal economy occurs outside state regulatory systems, informal commercial activities account for an estimated 30% of economic activity around the world. Informal entrepreneurship goes unmonitored despite the fact that it significantly contributes to poverty reduction and economic development. As a result, the informal sector is open to unethical practices including corruption, worker exploitation, and natural environment abuse to name just a few. In the media, debates have formed around whether informal entrepreneurship should be assisted or legitimized. Hence, a deep understanding of the phenomenon is vitally important. This book is the first on the market to offer models and approaches to informal entrepreneurship as well as to its prospects for economic development. Offering an in-depth examination of informal entrepreneurship in many different countries, it reveals the motivations for engaging in entrepreneurship in the informal economy, characteristics of informal entrepreneurship, and informal entrepreneurs' response to ethical issues. This volume illustrates the relationship between formal and informal economies and the conditions for the benefits of informal entrepreneurship to outweigh its disadvantages. And finally, it gives recommendations about when and how the informal economy can be formalized, which sectors should be formalized, and which ones can remain informal. This book offers much-needed guidance for stakeholders involved in economic development programs and scholars and entrepreneurs interested in the field of informal entrepreneurship as it is developing around the globe.

**New Challenges in Computational Collective Intelligence** Radoslaw Katarzyniak,Adam

Janiak,2009-09-29 Collective intelligence has become one of major research issues studied by today's and future computer science. Computational collective intelligence is understood as this form of group intellectual activity that emerges from collaboration and competition of many artificial individuals. Robotics, artificial intelligence, artificial cognition and group working try to create efficient models for collective intelligence in which it emerges from sets of actions carried out by more or less intelligent individuals. The major methodological, theoretical and practical aspects underlying computational collective intelligence are group decision making, collective action coordination, collective competition and knowledge description, transfer and integration. Obviously, the application of multiple computational technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory, knowledge representation etc. is necessary to create new forms of computational collective intelligence and support existing ones. Three subfields of application of computational

technologies to support forms of collective intelligence are of special attention to us. The first one is semantic web treated as an advanced tool that increases the collective intelligence in networking environments. The second one covers social networks modeling and analysis, where social networks are this area of in which various forms of computational collective intelligence emerges in a natural way. The third subfield relates us to agent and mul- agent systems understood as this computational and modeling paradigm which is especially tailored to capture the nature of computational collective intelligence in populations of autonomous individuals.

Language and Intercultural Communication in the New Era Farzad Sharifian, Maryam

Jamarani, 2013 Studies of intercultural communication in applied linguistics initially focused on miscommunication, mainly between native and non-native speakers of English. The advent of the twenty-first century has witnessed, however, a revolution in the contexts and contents of intercultural communication; technological advances such as chat rooms, emails, personal weblogs, Facebook, Twitter, mobile text messaging on the one hand, and the accelerated pace of people's international mobility on the other have given a new meaning to the term 'intercultural communication'. Given the remarkable growth in the prevalence of intercultural communication among people from many cultural backgrounds, and across many contexts and channels, conceptual divides such as 'native/non-native' are now almost irrelevant. This has caused the power attached to English and native speaker-like English to lose much of its automatic domination. Such developments have provided new opportunities, as well as challenges, for the study of intercultural communication and its increasingly complex nature. This book showcases recent studies in the field in a multitude of contexts to enable a collective effort towards advancements in the area.

**Networked Collective Actions** Hyunjin Seo, 2021-12-14 The summer of 2016 saw one of the most significant citizen protests in the history of democratic South Korea, eventually culminating in the impeachment and conviction of then President Park Geun-hye for corruption. Concerns about the president's behavior were raised in a polarized media environment with low public trust, where extreme right-wing media outlets amplified conspiracy theories and false claims in opposition to impeachment. How then was it possible for pro-impeachment protests seeking major social change to succeed? And why did pro-Park protesters and government efforts to defend Park ultimately fail? Based on interviews with key players in the impeachment movement and original analyses of news reports and social media posts, *Networked Collective Actions* untangles the intricate interactions among different actors that were supported and sometimes constrained by the technological, socio-political, and legal

environments in which they occurred. Moreover, Hyunjin Seo develops a theoretical framework for understanding collective actions in dynamic information ecosystems and analyzes how information consumption patterns might prompt someone to either immediately reject a certain piece of information or to reconsider and adopt that same information. Seo provides a nuanced examination of the role of journalism in a democracy where non-traditional intermediaries (e.g., social media influencers and bots) have emerged as important producers and filters of information, and in light of declining trust in news media.

**Genre, Reception, and Adaptation in the 'Twilight' Series** Anne Morey, 2016-04-15 Much of the criticism on Stephenie Meyer's immensely popular 'Twilight' novels has underrated or even disparaged the books while belittling the questionable taste of an audience that many believe is being inculcated with anti-feminist values. Avoiding a repetition of such reductive critiques of the series's purported shortcomings with respect to literary merit and political correctness, this volume adopts a cultural studies framework to explore the range of scholarly concerns awakened by the 'Twilight' novels and their filmic adaptations. Contributors examine 'Twilight's' debts to its predecessors in young adult, vampire, and romance literature; the problems of cinematic adaptation; issues in fan and critical reception in the United States and Korea; and the relationship between the series and contemporary conceptualizations of feminism, particularly girl culture. Placing the series within a broad tradition of literary history, reception studies, and filmic adaptation, the collection offers scholars the opportunity to engage with the books' importance for studies of popular culture, gender, and young adult literature.

*Internationalizing Internet Studies* Gerard Goggin, Mark McLelland, 2010-04-15 This timely book offers a mapping of the Internet as it has developed and is used internationally, providing a lively and challenging examination of the Internet and Internet studies. There is much interest among scholars and researchers in understanding the place of the Internet in cultural, social, national, and regional settings. This is the first book-length account that not only provides a range of perspectives on the international Internet, but also explores the implications of such new knowledge and accounts for concepts, methods, and themes in Internet studies. Of special interest will be the book's fresh and up-to-date coverage of the Internet in perhaps the most dynamic region at present: Asia-Pacific.

*Korea's Changing Roles in Southeast Asia* David I Steinberg, 2010 The Republic of Korea's global expansion has been mirrored by its interest and presence in Southeast Asia. From trade, investment, aid, tourism, to the cultural Korean wave, its various roles have blossomed and its influence has grown. The ASEAN region has not only affected Korean foreign policy, but also many aspects of Korean life, from the migration of Southeast Asian industrial workers to marriages and the curricula of academic institutions. This volume explores various aspects of these new relationships and their importance to all concerned parties. It brings together a group of specialists who have documented the growing interlocking roles between Korea and ASEAN and its constituent states in detail. These developments have profound implications for relations in the East and Southeast Asian regions, and for the world as a whole.

**Emotional Artificial Intelligence and Metaverse** Roger Lee, 2022-11-02 This edited book presents scientific results of the 1st ACIS International Symposium on Emotional Artificial Intelligence & Metaverse (EAIM) which was held on August 4-6, 2022, in Danang, Vietnam. The aim of this symposium was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users, and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. All aspects (theory, applications, and tools) of emotional artificial intelligence and metaverse, the practical challenges encountered along the way, and the solutions adopted to solve them are all explored here in the results of the articles featured in this book. The symposium organizers selected the best papers from those papers accepted for presentation at the symposium. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round of review, 15 of the symposium's most promising papers are then

published in this Springer (SCI) book and not the symposium proceedings. We impatiently await the important contributions that we know these authors will bring to the field of emotional artificial intelligence and metaverse.
