Assessing Readiness in Military Women Institute of Medicine,Food and Nutrition Board,Committee on Body Composition, Nutrition, and Health of Military Women,1998-01-01 U.S. military personnel are required to adhere to standards of body composition, fitness, and appearance to achieve and maintain readiness—that is, the maintenance of optimum health and performance so they are ready for deployment at any moment. In 1992, the Committee on Military Nutrition Research reviewed the existing standards and found, among other things, that the standards for body composition required for women to achieve an appearance goal seemed to conflict with those necessary to ensure the ability to perform many types of military tasks. This report addresses that conflict, and reviews and makes recommendations about current policies governing body composition and fitness, as well as postpartum return-to-duty standards, Military Recommended Dietary Allowances, and physical activity and nutritional practices of military women to determine their individual and collective impact on the health, fitness, and readiness of active-duty women.

Body Composition and Physical Performance

Institute of Medicine,Committee on Military Nutrition Research,1992-02-01 This book surveys

the entire field of body composition as it relates to performance. It includes a clear definition of terminology and a discussion of the various methods for measuring body composition. The authored papers represent a state-of-the-art review of this controversial field and address questions such as: What is a better measure of body composition—body fat or lean body mass? Does being overweight for one's height really affect performance? The book also addresses the issue of physical appearance as it relates to body fatness and performance. It includes an in-depth discussion of many of the topics of interest to those involved in sports medicine and exercise physiology.

Weight Management Institute of Medicine,Food and Nutrition Board,Committee on Military Nutrition Research,Subcommittee on Military Weight Management,2003-12-01 The primary purpose of fitness and body composition standards in the U.S. Armed Forces has always been to select individuals best suited to the physical demands of military service, based on the assumption that proper body weight and composition supports good health, physical fitness, and appropriate military appearance. The current epidemic of overweight and obesity in the United States affects the military services. The pool of available recruits is reduced because of failure to meet body composition standards for entry into the services and a high percentage of individuals exceeding military weight-for-height standards at the time of entry into the service leave the military before completing their term of enlistment. To aid in developing strategies for prevention and

remediation of overweight in military personnel, the U.S. Army Medical Research and Materiel Command requested the Committee on Military Nutrition Research to review the scientific evidence for: factors that influence body weight, optimal components of a weight loss and weight maintenance program, and the role of gender, age, and ethnicity in weight management.

Civil-Military Cooperation in Response to a Complex Emergency Rietjens, 2008-02-28 Taking a business alliance approach, this book analyses civil-military cooperation processes in Kosovo, Kabul and the Afghan province Baghlan. It identifies the phases in these processes, highlights main factors and proposes a framework for evaluating the quality of civil-military cooperation.

Beyond the Band of Brothers Megan MacKenzie, 2015-06-17 Women can't fight. This assumption lies at the heart of the combat exclusion, a policy that was fiercely defended as essential to national security, despite evidence that women have been contributing to hostile operations now and throughout history. This book examines the role of women in the US military and the key arguments used to justify the combat exclusion, in the light of the decision to reverse the policy in 2013. Megan MacKenzie considers the historic role of the combat exclusion in shaping

American military identity and debunks claims that the recent policy change signals a new era for women in the military. MacKenzie shows how women's exclusion from combat reaffirms male supremacy in the military and sustains a key military myth, the myth of the band of brothers. This book will be welcomed by scholars and students of military studies, gender studies, social and military history, and foreign policy.
