Anna-Teresa Tymieniecka, Attila Grandpierre

Mysteries and Discoveries of Archaeoastronomy Giulio Magli, 2009-04-09 The book is divided into two parts. In the first, the reader is taken on an ideal 'world tour' of many wonderful and enigmatic places in almost every continent, in search of traces of astronomical knowledge and lore of the sky. In the second part, Giulio Magli uses the elements presented in the tour to show that the fundamental idea which led to the construction of the astronomically-related giant monuments was the foundation of power, a foundation which was exploited by 'replicating' the sky. A possible interpretive model then emerges that is founded on the relationship the ancients had with "nature", in the sense of everything that surrounded them, the cosmos. The numerous monumental astronomically aligned structures of the past then become interpretable as acts of will, expressions of power on the part of those who held it; the will to replicate the heavenly plane here on earth and to build sacred landscapes. Finally, having formulated his hypothesis, Professor Magli returns to visit one specific place in detail, searching for proof. This in-depth examination studies the most compelling, the most intensively studied, the most famous and, until recently, the most misunderstood sacred landscape on the planet - Giza, in Egypt. The archaeoastronomical analysis of the orientation of the Giza pyramids leads to the hypothesis that the pyramids of Cheops and Chephren belong to the same construction project.

Astronomy and Astrophysics in the New Millennium National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Board on Physics and Astronomy, Astronomy and Astrophysics Survey Committee, 2001-02-16 In this new book, a distinguished panel makes recommendations for the nation's programs in astronomy and astrophysics, including a number of new initiatives for observing the universe. With the goal of optimum value, the recommendations address the role of federal research agencies, allocation of funding, training for scientists, competition and collaboration among space facilities, and much more. The book identifies the most pressing science questions and explains how specific efforts, from the Next Generation Space Telescope to theoretical studies, will help reveal the answers. Discussions of how emerging information technologies can help scientists make sense of the wealth of data available are also included. Astronomy has significant impact on science in general as well as on public imagination. The committee discusses how to integrate astronomical discoveries into our education system and our national life. In preparing the New Millennium report, the AASC made use of a series of panel reports that address various aspects of ground- and space-based astronomy and astrophysics. These reports provide in-depth technical detail. *Astronomy and Astrophysics in the New Millennium: An Overview* summarizes the science goals and recommended initiatives in a short, richly illustrated, non-technical booklet.

The New Archeological Discoveries and Their Bearing Upon the New Testament and Upon the Life and Times of the Primitive Church Camden McCormack Cobern, 1918

Earths of Distant Suns Michael Carroll, 2016-10-03 Based on the latest missions results and supported by commissioned artwork, this book explores the possible lessons we may learn from exoplanets. As the number of known Earth-like objects grows significantly, the author explores what is known about the growing roster of pale blue dots far afield. Aided by an increased sensitivity of the existing observatories, recent discoveries by Keck, the Hubble Space Telescope, and Kepler are examined. These findings, once thought to be closer to the realm of science fiction, have fired the imaginations of the general public as well as scientists. All of us are mesmerized by the possibility of other Earth-like worlds out there. Author Michael Carroll asks the tough questions of what the expected gain is from identifying these Earth analogs spread across the Universe and the reasons for studying them. Potentially, they could teach us about our own climate and Solar System. Also explored are the more remote options of communication between or even travel to these distant yet perhaps not so dissimilar worlds.

Vistas in Astronomy Arthur Beer, 2016-06-30 *Vistas in Astronomy*, Volume 10 covers topics related to philosophy, dynamics, astrometry, astro-archeology, correlations, astrophysics, history, instrumentation, and cosmogony. The volume discusses some fundamental problems arising from the paper "Is Religion Refuted by Physics or Astronomy?" with focus on thermodynamics, statistical mechanics and the universe. The criteria that will take account of previous criticisms and results in astro-archeology that may be assessed in terms of the said criteria; the planetary theory of Copernicus; and a comparison of Romer's Triduum observations and Flamsteed's observations are also explained. The volume describes an application of the four-body problem in the general behavior of the synchronous orbit in the presence of the Moon and the Sun. An analysis of linear correlation in astronomy; the design and construction of astronomical telescopes; and advances in the knowledge of the nature of open clusters resulting mainly through accurate photometry of stars in cluster fields are also discussed. The book also considers the polarization of the continuous radiation in the optical (and particularly visual) spectral region as well as the planetary cosmogonical ideas and theories. People involved in astronomy and philosophy will find the volume invaluable.

The Power of Stars Bryan E. Penprase, 2017-05-05 Completely revised and updated, this new edition provides a readable, beautifully illustrated journey through world cultures and the vibrant array of sky mythology, creation stories, models of the universe, temples and skyscrapers that each culture has created to celebrate and respond to the power of the night sky. Sections on the archaeoastronomy of South Asia and South East Asia have been expanded, with original photography and new research on temple alignments in Southern India, and new material describing the astronomical practices of Indonesia, Malaysia and other Southeast Asian countries. Beautiful photographs of temples in India and Asia have been added, as well as new diagrams explaining the alignment of these structures and the astronomical underpinnings of temples within the Pallava and Chola cultures. From new fieldwork in the

Four Corners region of North America, Dr. Penprase has included accounts of Pueblo skywatching and photographs of ceremonial kivas that help elucidate the rich astronomical knowledge of the Pueblo people. The popular "Archaeoastronomy of Skyscrapers" section of the book has been updated as well, with new interpretations of skyscrapers in Indonesia, Taiwan and China. With the rapid pace of discovery in astronomy and astrophysics, entirely new perspectives are emerging about dark matter, inflation and the future of the universe. The Power of Stars puts these discoveries in context and describes how they fit into the modern perspective of cosmology, which has arisen from the universal human response to the sky that has inspired both ancient and modern cultures.

Discovery of the First Asteroid, Ceres Clifford Cunningham, 2015-10-13 Based on extensive primary sources, many never previously translated into English, this is the definitive account of the origins of Ceres as it went from being classified as a new planet to reclassification as the first of a previously unknown group of celestial objects. Cunningham opens this critical moment of astronomical discovery to full modern analysis for the first time. This book includes all the voluminous correspondence, translated into English, between the astronomers of Europe about the startling discovery of Ceres by Piazzi in 1801. It covers the period up to March 1802, at which time Pallas was discovered. Also included are Piazzi's two monographs about Ceres, and the sections of two books dealing with Ceres, one by Johann Bode, the other by Johann Schroeter. The origin of the word 'asteroid' is explained, along with several chapters on the antecedents of the story going back to ancient Greek times. The formulation of Bode's Law is given, as are the details on the efforts of Baron von Zach to organize a search for the supposed missing planet between Mars and Jupiter. Examples of verse created to commemorate the great discovery are included in this first volume. The author, who has a PhD in the History of Astronomy, is a dedicated scholar of the story of asteroids and his research on the discovery of Ceres is comprehensive and fully sourced. The discovery came at a time when rival astronomers were in hot competition with each other, and when the true nature of these celestial bodies was not yet known. With astronomers in France, Italy and beyond vying to understand and receive credit for the new class of astral bodies, drama was not in short supply--nor were scientific advances.

SUMMARY OF RECENT DISCOVERIES BIBLICAL CHRONOLOGY, UNIVERSAL HISTORY, AND EGYPTIAN ARCHEOLOGY; G. SEYFFARTH, A.M., PH. D., D.D., 1859

Astronomy and Civilization in the New Enlightenment Anna-Teresa Tymieniecka, Attila Grandpierre, 2010-11-18 This volume represents the first which interfaces with astronomy as the fulcrum of the sciences. It gives full expression to the human passion for the skies. Advancing human civilization has unfolded and matured this passion into the comprehensive science of astronomy. Advancing science's quest for the first principles of existence meets the onto-poietic generative logos of life, the focal point of the New Enlightenment. It presents numerous perspectives illustrating how the interplay between human beings and the celestial realm has informed civilizational trends. Scholars and philosophers debate in physics and biology, the findings of which are opening a more inclusive, wider picture of the universe. The different models of the universal order and of life here presented, all aiming at the first principles of existence--accord with the phenomenology/onto-poiesis of life

within the logos-prompted primogenital stream of becoming and action, which points to a future of progressing culture.

Early Astronomy Hugh Thurston,2012-12-06 People must have watched the skies from time immemorial. Human beings have always shown intellectual curiosity in abundance, and before the invention of modern distractions people had more time-and more mental energy-to devote to stargazing than we have. Megaliths, Chinese oracle bones, Babylonian clay tablets, and Mayan glyphs all yield evidence of early peoples' interest in the skies. To understand early astronomy we need to be familiar with various phenomena that could-and still can-be seen in the sky. For instance, it seems that some early people were interested in the points on the horizon where the moon rises or sets and marked the directions of these points with megaliths. These directions go through a complicated cycle-much more complicated than the cycle of the phases of the moon from new to full and back to new, and more complicated than the cycle of the rising and setting directions of the sun. Other peoples were interested in the irregular motions of the planets and in the way in which the times of rising of the various stars varied through the year, so we need to know about these phenomena, i. e. , about retrogression and about heliacal rising, to use the technical terms. The book opens with an explanation of these matters. Early astronomers did more than just gaze in awe at the heavenly bodies; they tried to understand the complex details of their movements. By 300 H. C.

The New Solar System Patricia Daniels,2009 From breathtaking full-color photographs to detailed explanatory diagrams to expert essays, fascinating sidebars, and informative fact boxes, the New Solar System is not just an easy-to-use, solidly reliable reference, but also a visually stunning, invitingly browsable volume guaranteed to fire the imagination of even the most casual reader.

Episodes From the Early History of Astronomy Asger Aaboe,2011-06-27 Phenomena in the heavens are of great importance to many, and much of the lore of astronomy and astrology dates back to the earliest days of civilisation. The astronomy of the ancients is thus of interest not only as history but also as the basis for much of what is known or believed about the heavens today. This book discusses important topics in Babylonian and Greek astronomy.

Searching for the Oldest Stars Anna Frebel,2019-08-27 A leading astronomer takes readers behind the scenes of the thrilling science of stellar archaeology and explains how sections of the night sky are excavated in the hunt for extremely rare, 13-billion-year-old relic stars and how this quest reveals tantalizing new details about the origins and evolution of the cosmos.

The Mystery of the Black Pyramids... Solved! Cornel M. A. van Strijp,2020-01-01 Are there pyramids in the Canary Islands? World-famous explorer Thor Heyerdahl thought so, and created a tourist park around them. Other investigators have found identical structures in Sicily, Mauritius, and the Azores. Step pyramids, made of lava

stones, on islands thousands of miles apart... Who built these monuments? When did they build them, and why? To answer these questions, investigative reporter Cornel M.A. van Strijp takes you on a trip along the volcanic islands where the so-called 'black pyramids' can be found. During this voyage of discovery, you will encounter many controversial ideas and passionate beliefs about mysterious structures. You will also find completely disregarded scientific research that holds the key to understanding the phenomenon. By the end of the book, you will be able to decide for yourself if the media claims about these step pyramids are true... If you are a 'believer', this book will challenge your convictions. If you are a 'doubter', it can help you decide. But whatever your thoughts on the matter, *The Mystery of the Black Pyramids... Solved!* is a must-read if you enjoy historical enigmas. NOTE: This edition in ebook format has over 100 color illustrations.
