

New Scientist Beta

Mick O'Hare

New Scientist ,2003

The Last Word Mick O'Hare,1998 A selection of the most interesting questions and answers from the Last word column in the magazine, New scientist.

The New Science of the Fundamental Physics William Walker Strong,1918

New Scientist ,2009

The New Science and the Old Religion Thornwell Jacobs,1927

New Scientist: The Origin of (almost) Everything New Scientist,Graham Lawton,2016-10-25 From what actually happened in the Big Bang to the accidental discovery of post-it notes, the history of science is packed with surprising discoveries. Did you know, for instance, that if you were to get too close to a black hole it would suck you up like a noodle (it's called spaghettification), why your keyboard is laid out in QWERTY (it's not to make it easier to type) or why animals never evolved wheels? New Scientist does. And now they and award-winning illustrator Jennifer Daniel want to take you on a colorful, whistle-stop journey from the start of our universe (through the history of stars, galaxies, meteorites, the Moon and dark energy) to our planet (through oceans and weather and oil) and life (through dinosaurs to emotions and sex) to civilization (from cities to alcohol and cooking), knowledge (from alphabets to alchemy) ending up with technology (computers to rocket science). Witty essays explore the concepts alongside enlightening infographics that zoom from how many people have ever lived, to showing you how a left-wing brain differs from a right-wing one...

How to Be Human New Scientist,2017-09-21 If you thought you knew who you were,

THINK AGAIN. Did you know that half your DNA isn't human? That somebody, somewhere has exactly the same face? Or that most of your memories are fiction? What about the fact that you are as hairy as a chimpanzee, various parts of your body don't belong to you, or that you can read other people's minds? Do you really know why you blush, yawn and cry? Why 90 per cent of laughter has nothing to do with humour? Or what will happen to your mind after you die? You belong to a unique, fascinating and often misunderstood species. How to be Human is your guide to making the most of it.

The New Science and Invention in Pictures ,1923

Love is the Drug Brian D. Earp, Julian Savulescu, 2020 What if there were a pill for love? Or an anti-love drug, designed to help us break up? This controversial and timely new book argues that recent medical advances have brought chemical control of our romantic lives well within our grasp. Substances affecting love and relationships, whether prescribed by doctors or even illicitly administered, are not some far-off speculation - indeed our most intimate connections are already being influenced by pills we take for other purposes, such as antidepressants. Treatments involving certain psychoactive substances, including MDMA-the active ingredient in Ecstasy-might soon exist to encourage feelings of love and help ordinary couples work through relationship difficulties. Others may ease a breakup or soothe feelings of rejection. Such substances could have transformative implications for how we think about and experience love. This brilliant intervention into the debate builds a case for conducting further research into love drugs and anti-love drugs and explores their ethical implications for individuals and

society. Rich in anecdotal evidence and case-studies, the book offers a highly readable insight into a cutting-edge field of medical research that could have profound effects on us all

Quantum Steampunk Nicole Yunger Halpern,2022-04-12 The science-fiction genre known as steampunk juxtaposes futuristic technologies with Victorian settings. This fantasy is becoming reality at the intersection of two scientific fields-twenty-first-century quantum physics and nineteenth-century thermodynamics, or the study of energy-in a discipline known as quantum steampunk--

How to Clone a Mammoth Beth Shapiro,2020-09-08 An insider's view on bringing extinct species back to life Could extinct species, like mammoths and passenger pigeons, be brought back to life? In *How to Clone a Mammoth*, Beth Shapiro, an evolutionary biologist and pioneer in ancient DNA research, addresses this intriguing question by walking readers through the astonishing and controversial process of de-extinction. From deciding which species should be restored to anticipating how revived populations might be overseen in the wild, Shapiro vividly explores the extraordinary cutting-edge science that is being used to resurrect the past. Considering de-extinction's practical benefits and ethical challenges, Shapiro argues that the overarching goal should be the revitalization and stabilization of contemporary ecosystems. Looking at the very real and compelling science behind an idea once seen as science fiction, *How to Clone a Mammoth* demonstrates how de-extinction will redefine conservation's future.

Beta Blockers Momoka Endo,Nanami Matsumoto,2008 This edited work provides leading research on Beta blockers which are a class of drugs used for various indications,

but particularly for the management of cardiac arrhythmias and cardioprotection after myocardial infarction and tachyarrhythmias.

The Beta Theta Pi ,1885

Project Beta Greg Bishop,2005-02-08 The shocking true story of the United States government's quest to hide the reality of extraterrestrial contact, even at the cost of its citizens. In 1978, Paul Bennewitz, an electrical physicist living in Albuquerque, New Mexico, became convinced that the strange lights he saw hovering in the night sky were extraterrestrial. He reached out to newspapers, senators, and even the president before anyone responded. Air Force investigators listened to his story, as did Bill Moore, the author of the first book on the infamous Roswell UFO incident. Unbeknownst to Bennewitz, Moore was hired by a group of intelligence agents to keep tabs on Bennewitz while the Air Force ran a psychological profile and disinformation campaign on the unsuspecting physicist. In return, Air Force Intelligence would let Moore in on classified UFO material. What follows is a scandalous true tale of disinformation, corruption, and exploitation, all at the hands of the United States intelligence community.

The Disordered Cosmos Chanda Prescod-Weinstein,2021-03-09 From a star theoretical physicist, a journey into the world of particle physics and the cosmos—and a call for a more liberatory practice of science. Winner of the 2021 Los Angeles Times Book Prize in Science & Technology A Finalist for the 2022 PEN/E.O. Wilson Literary Science Writing Award A Smithsonian Magazine Best Science Book of 2021 A Symmetry Magazine Top 10 Physics Book of 2021 An Entropy Magazine Best Nonfiction Book of 2020-2021 A Publishers Weekly Best Nonfiction Book of the Year A Kirkus Reviews Best Nonfiction

Book of 2021 A Booklist Top 10 Sci-Tech Book of the Year In *The Disordered Cosmos*, Dr. Chanda Prescod-Weinstein shares her love for physics, from the Standard Model of Particle Physics and what lies beyond it, to the physics of melanin in skin, to the latest theories of dark matter—along with a perspective informed by history, politics, and the wisdom of Star Trek. One of the leading physicists of her generation, Dr. Chanda Prescod-Weinstein is also one of fewer than one hundred Black American women to earn a PhD from a department of physics. Her vision of the cosmos is vibrant, buoyantly nontraditional, and grounded in Black and queer feminist lineages. Dr. Prescod-Weinstein urges us to recognize how science, like most fields, is rife with racism, misogyny, and other forms of oppression. She lays out a bold new approach to science and society, beginning with the belief that we all have a fundamental right to know and love the night sky. *The Disordered Cosmos* dreams into existence a world that allows everyone to experience and understand the wonders of the universe.
