Panzerfaust and Panzerschreck Gordon L. Rottman,2014-08-20 Two of World War II's most distinctive weapons, the Panzerfaust and Panzerschreck offered German and other infantrymen the ability to destroy enemy tanks singlehandedly at close ranges. While the Panzerschreck owed its origins largely to the US bazooka, the Panzerfaust was a revolutionary design that was unlike any previous weapon, and went on to influence anti-tank technology and tactics for decades after World War II. Allied troops, notably Soviet forces, made widespread use of captured Panzerfäuste, and they were also supplied to German allies such as Finland, Hungary and Bulgaria. Written by an expert on anti-tank warfare, this book reveals the fascinating development history of these two feared weapons and assesses the tactics that were employed by the soldiers using them.

A History of Chemical Warfare K. Coleman,2005-05-23 This book provides an analysis of the development and deployment of chemical weapons from 700BC to the present day. The First World War is examined in detail since it remains the most significant experience of the chemical threat, but the Second World War, and post-war conflicts are also evaluated. Additionally, protocols attempting to control the proliferation and use of chemical weapons are assessed. Finally, the book examines the threat (real and imagined) from a chemical warfare attack today by rationally assessing to what extent terrorist groups around the world are capable of making and using such weapons.

Astronomical Odds Geoffrey Sommer,2005 Addresses the cosmic impact hazard (the threat to the Earth posed by asteroids and comets) as an extreme example of a low-probability, high-consequence policy problem. This analysis presents a comprehensive framework for dealing with the technical and societal uncertainties surrounding the impact hazard. It reviews the physical nature of the threat and both the history and mechanisms of society's response to the hazard, dwelling on the social costs of false positives. The author constructs an illustrative cost-benefit model on the foundations of prior work, with parameters of social response added and then varied to assess the robustness of a proposed policy intervention: social reassurance by means of a demonstrated mitigation capability. He concludes by noting that a common flaw of prior analysis is to give lip service to low probability and to focus instead on high consequence; that there is frequent confusion between ex ante and ex post perspectives; that uncertain costs are often treated as nonexistent costs; and that warning is a social function, not a technical function, and those who issue warnings of a given hazard should not stand to benefit from those warnings.

Startup Jerry Kaplan,1996-10-01 Kaplan, a well-known figure in the computer industry, founded GO Corporation in 1987, and for several years it was one of the hottest new ventures in the Valley. Startup tells the story of Kaplan's wild ride: how he assembled a brilliant but fractious team of engineers, software designers, and investors; pioneered the emerging market for hand-held computers operated with a pen instead of a keyboard; and careened from crisis to crisis without ever losing his passion for a revolutionary idea. Along the way, Kaplan vividly recreates his encounters with eccentric employees, risk-addicted venture capitalists, and industry giants such as Bill Gates, John Sculley, and Mitchell Kapor. And no one - including Kaplan himself - is spared his sharp wit and observant eye.

Buyology Martin Lindstrom,2010-02-02 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today’s message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

Developing Basic Space Science World-Wide Willem Wamsteker,Rudolf Albrecht,Hans J. Haubold,2007-05-08 ? J. Andersen Niels Bohr Institute for Astronomy Physics and Geophysics Astronomical Observatory Copenhagen ja@astro.ku.dk The development of astronomy worldwide begins at the roots: Already from childhood, humans of all nations and civilizations seem to share an innate fascination with the sky. Yet, people in different regions of the world have vastly different possibilities for pursuing this interest. In wealthy, industrialised societies the way is open to a school or higher education in science, possibly leading to a career in astronomy or basic or applied space science for the benefit of the country as well as the individual. In other regions, neither the financial nor the trained human resources are sufficient to offer that avenue to the future of the young generation, or those intellectual resources to the development of their country. This book addresses ways and means by which these obstacles can be, if not fully overcome, then at least significantly reduced.

The Korean Military Balance Anthony H. Cordesman,2011 This report describes the key results of an analysis conducted to assess the overall balance of forces on the Korean Peninsula. Given the complexity of relations between the Republic of Korea (ROK) and the Democratic People's Republic of Korea (DPRK), such an assessment of the conventional, asymmetric, and CBRN (chemical, biological, radiological, and nuclear) capabilities on each side is vital to negotiations between states and efforts at arms control. At the same time, there is no one Korean military balance that can be used for policy planning or arms control negotiations until decisions are made about what forces and issues to address. The tensions between the Koreas -- and the potential involvement of the People's Republic of China, Japan, and the United States at both the political and military level -- create a virtually open-ended spectrum of possible conflicts. This is particularly true if one considers the number of times that war has grown out of unpredictable incidents and patterns of escalation, the historical reality that the probability of less likely forms of war actually occurring has been consistently higher than what seem to be the most probable contingencies in peacetime, and the patterns of escalation that seem most likely from the viewpoint of a rational bargainer.
