The Art and Science of NFC Programming Anne-Marie Lesas, Serge Miranda, 2017-01-03 NFC is a world standard since 2004 which is now within every smartphone on the market. Such a standard enables us to do mobile transactions (mobile payment) in a secure way along with many other information-based tap'n play operations. This book has a double role for computer scientists (from bachelor students in CS to IT professionals).

Beginning NFC Tom Igoe, Don Coleman, Brian Jepson, 2014-01-14 Jump into the world of Near Field Communications (NFC), the fast-growing technology that lets devices in close proximity exchange data, using radio signals. With lots of examples, sample code, exercises, and step-by-step projects, this hands-on guide shows you how to build NFC applications for Android, the Arduino microcontroller, and embedded Linux devices. You'll learn how to write apps using the NFC Data Exchange Format (NDEF) in PhoneGap, Arduino, and node.js that help devices read messages from passive NFC tags and exchange data with other NFC-enabled devices. If you know HTML and JavaScript, you're ready to start with NFC. Dig into NFC's architecture, and learn how it's related to RFID. Write sample apps for Android with PhoneGap and its NFC plugin. Dive into NDEF: examine existing tag-writer apps and build your own. Listen for and filter NDEF messages, using PhoneGap event listeners. Build a full Android app to control lights and music in your home. Create a hotel registration app with Arduino, from check-in to door lock. Write peer-to-peer NFC messages between two Android devices. Explore embedded Linux applications, using examples on Raspberry Pi and BeagleBone.

Secure data transmission between an NFC tag and an NFC enabled smartphone Siddharth Sharma, 2016-08-17 Master's Thesis from the year 2015 in the subject Computer Science - Internet, New Technologies, Royal Holloway, University of London, course: Msc Information Security, language: English, abstract: NFC technology is considered extremely secure for communication and the number of phones that can support NFC is also at a rise. The technology is gaining worldwide recognition and as it is easy to implement and since it is really economical numerous applications are using it. Most of NFC applications involve the usage of tags, which can easily be duplicated or can be replaced by a fake one. Therefore, though the technology is so useful and secure, this weakness makes it vulnerable to certain attacks. NFC has numerous applications but in this thesis, I will be discussing various security threats related to NFC applications involving NFC tag and an NFC enabled smartphone, for example smart posters. This thesis will evaluate various security threats like phishing, exposure to adult content etc., what they are and how an attacker can carry out these attacks. Further discussion will be on what an artificial neural network (ANN) is and how it can be used to eliminate these threats. The thesis also proposes a security model that will use ANN, to provide security against threats and will also provide user confidentiality, anonymity and privacy, and a category classifier to increase the overall efficiency of the model and to decrease the memory usage, and will also provide users with an added feature of personalizing their security according to their requirements.

RFID Security Frank Thornton,Chris Lanthem,2006-05-25 RFID is a method of remotely storing and receiving data using devices called RFID tags. RFID tags can be small adhesive stickers containing antennas that receive and respond to transmissions from RFID transmitters. RFID tags are used to identify and track everything from food, dogs, beer kegs to library books. RFID tags use a standard that has already been hacked by several researchers. RFID Security discusses the motives for someone wanting to hack an RFID system and shows how to protect systems. Coverage includes: security breaches for monetary gain (hacking a shops RFID system would allow a hacker to lower the pricing on any product products). How to protect the supply chain (malicious/mischievous hackers can delete/alter/modify all identifying information for an entire shipment of products). How to protect personal privacy (privacy advocates fear that RFID tags embedded in products, which continue to transmit information after leaving a store, will be used to track consumer habits). The purpose of an RFID system is to enable data to be transmitted by a portable device, called a tag, which is read by an RFID reader and processed according to the needs of a particular application. The data transmitted by the tag may provide identification or location information, or specifics about the product tagged, such as price, colour, date of purchase, etc. . * Deloitte & Touche expects over 10 billion RFID tags to be in circulation by the end of 2005 * Parties debating the security issue of RFID need information on the pros and cons of the technology and this is that information * Little competition in a market desperate for information
