Acceptance and Success Factors for NFC-Mobile-Payment in South Korea. In Comparison to Austria and Taiwan Jakob Harb,2016-12-28 Master's Thesis from the year 2016 in the subject Information Management, grade: 1, University of Graz (Department of Information Science and Information Systems, University of Graz, Austria / Department of Management Information Systems, Chungbuk National University, Republic of Korea), language: English, abstract: NFC-Mobile-Payment describes contactless payment transactions using near-field-communication-technology. This payment technology is currently used in bank- and credit cards, as well as in mobile phones. This thesis focuses on NFC-Mobile-Payment using mobile phones. Aim of this work was, to identify the drivers of the customer adoption of NFC-Mobile-Payment in South Korea and compare them to previous findings from Austria and Taiwan. The drivers have been analyzed using the model of Pham and Ho that bases on the Technology-

Acceptance Model (TAM). The countries have been compared to each other taking in account cultural, technological, and sociological differences and similarities. An empirical inquiry has been processed and data has been collected through an online survey. The found data was analyzed using the Maximum-Likelyhood-Method. In South Korea, the users' trust in the involved companies and people, the absorptive capacity, the compatibility with the lifestyle and the tasks of the users the trialability, the personal innovativeness the attractiveness of available alternatives and the perceived usefulness were identified as influential drivers on the adoption of NFC-Mobile-Payment. The findings from South Korea differed significantly from those in the other two countries. Significant differences between Korea and the other two countries were found in all observed drivers except the users' trust in the involved companies and people and the attractiveness of available alternatives. Another important finding is that in some aspects, the two Asian countries share more similarities with each other than both do with Austria, but in other aspects, Austria

  Bank 3.0 Brett King,2012-11-19 The first edition of BANK 2.0—#1 on Amazon's bestseller list for banking and finance in the US, UK, Germany, France, and Japan for over 18 months—took the financial world by storm and became synonymous with disruptive customer behaviour, technology shift, and new banking models. In BANK 3.0, Brett King brings the story up to date with the latest trends redefining financial services and payments—from the global scramble for dominance of the mobile wallet and the expectations created by tablet computing to the operationalising of the cloud, the explosion of social media, and the rise of the de-banked consumer, who doesn't need a bank at all. BANK 3.0 shows that the gap between customers and financial services players is rapidly widening, leaving massive opportunities for new, non-bank competitors to totally disrupt the industry. On the Web and on Mobile, the customer isn't king—he's dictator. Highly impatient, skeptical, cynical. Brett King understands deeply what drives this new hard-nosed customer. Banking professionals would do well to heed his advice. —Gerry McGovern, author of Killer Web Content

   Air Transport in the 21st Century John F. O'Connell,George Williams,2016-12-05 Airlines are buffeted by fluctuating political and economic landscapes, ever-changing competition, technology developments, globalization, increasing deregulation and evolving customer requirements. As a consequence all sectors of the air transport industry are in a constant state of flux. The principle aim of this book is to review current trends in the airline industry and its related suppliers, thereby providing an insight into the forces that are changing its dynamics. The factors that are reshaping the structure of the industry are examined with a view to identifying the key issues whose impact will be critical in the future. The book features two very distinct sections. The first contains short contributions from industry executives at CEO/VP level from airlines, aircraft/engine manufacturers, safety and navigational provider organisations, who have set out their take of where the airline industry is heading. This commercial input sets the scene for the book and provides the bridge to the second section, which is composed of 18 chapters written by distinguished academic authors. Each chapter presents a valuable insight into a specific area of the air transport industry, including: airlines, airports, cargo, deregulation, the environment, navigation, strategy, information

technology, security and tourism. The shared objective of the authors is to describe and explain the core competencies that are determining the current shape of the industry and to examine the forces that will change its direction going forward. The book is written in a management style and will appeal to all levels of personnel who work for airlines across the world. It is also written for airport authorities, aerospace manufacturers, regulatory and government transportation agencies, researchers and students of aviation management, transport studies, tourism and the wider air transport industry.
