Twice round the clock; or, The hours of the day and night in London by George Augustus Sala. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Keeping in Time with Your Body Clock J. M. Waterhouse,2002 Why am I always tired? Why can't I sleep at night? Why do I suffer from jetlag? We all have a body clock, a biological structure that controls how we feel, our mental and physical performance, and whether we are active or asleep. This is nature's response to our rhythmic environment, dominated by day and night. Though the body clock normally adjusts us to daytime activity andnight time sleep, it can go wrong or be tricked by lifestyle changes. This can result in jetlag, some forms of insomnia and even depression. Keeping in time with your body clock provides clear and accessible advice on how to live with, and not against, your body clock. In a clear and accessible style, it explains how the body clock works, how and why it can work against you, and the measures you can take to optimise your feeling ofhealth and wellbeing. It also explains the role of the body

clock in illness, and how an understanding of this can increase your feeling of health. An essential book for anyone who wants to better understand their body and optimise their feeling of health and wellbeing.

The Body Clock Guide to Better Health Michael Smolensky,Lynne Lamberg,2001-05 Chronotherapy--adjusting the care of the body to coincide with the body's natural clock--is poised to be the next major revolution in medical science. An understanding and awareness of these rhythms will enable readers to maximize the effects of medications, other treatments, diets, exercise programs, and other daily routines. 10 illustrations.

The Clock People Mark Roland Langdale,2018-08-14 A highly imaginative fantasy book for children and young adults. Written in the authors' unmistakable style, the book transports readers to a different world.The narrative surrounds the theme of time and follows people who live inside a clock. The Clock People is a wondrous work of mechanical engineering and imagineering that runs both like clockwork and anti-clockwork! The story follows the lives of people who live and work inside an antique golden fob watch to the sound of clicking, ticking, tocking, whirling and whirring. The Clock People lost their home, downsizing to another property in Clock Town. But this is just half of the story, the other half is lost in time, waiting to be discovered... The Clock People is Mark Roland Langdale's fifth Matador children's book, and will appeal to science fiction and fantasy lovers along with fans of his former books. "What is time? Scientists who believe in quantum wonder tales would have you believe it does not exist, that it is simply an illusion a clever conjuring trick and nothing more..."

Biological Clock in Fish Ewa Kulczykowska,Włodzimierz Popek,B.G. Kapoor,2010-05-27 Each organism

has its own internal biological clock, which is reset by environmental cues (Zeitgebers), thus keeping it synchronized with the external environment. It is a chemically based oscillating system within cells, relying on molecular feedback loops. Circadian biological clocks exist in most organisms. What is so special about the clock in fish? Where is it located—in the retina, inside the brain, or in the pineal? What is the molecular basis of its function? How is the clock able to keep time in the absence of environmental cues? Although biological clocks have been intensively studied over the past four decades, only recently have the tools needed to examine the molecular basis of circadian rhythms become available. This book reviews the state of knowledge in sufficient detail and presents the latest contributions to the field, showing fish provide a unique model of the circadian biological clock.

The Living Clock John D. Palmer, 2002-03-14 From one-celled paramecium to giant blue whales, we all have internal clocks that regulate the rhythms we live by. In *The Living Clock*, John Palmer, one of the

world's leading authorities on these rhythms, takes us on a tour of this broad and multifaceted subject, examining everything from glowing fruit flies to the best cures for jet lag. Palmer has a wonderful sense of humor and an eye for the startling fact. We learn that fiddler crabs--in a lab where there are no time nor tide cues--remain active when low tide would occur and motionless during high tide, the same pattern they follow in their natural habitat. (In fact, you can remove a crab's leg and the leg will keep a tidal rhythm as long as it's kept alive.) Moreover, humans are subject to more than one hundred biological rhythms. Mental acuity peaks in the afternoon, for instance, and our blood pressure peaks at seven in the morning (when most heart attacks occur). The time of day you take medication can affect how well it works. And Palmer shows that when our clocks are thrown off kilter, trouble follows, especially for rotating shift workers--the Bhopal spill, the Chernobyl reactor explosion, and the Three Mile Island accident all happened when new crews began early-hour shifts. No one has discovered exactly how our internal clocks work--Palmer says a Nobel Prize awaits that lucky scientist--but they are no less fascinating for their inexplicable nature. Frequently amusing and always eye-opening, *The Living Clock* is a treat for everyone curious about the nature of life as well as anyone planning a long jet flight.
