Rhonda Fleming Hayes

*Mosquitopia* Marcus Hall, Dan Tamir, 2021-09-01 This edited volume brings together natural scientists, social scientists and humanists to assess if (or how) we may begin to coexist harmoniously with the mosquito. The mosquito is humanity's deadliest animal, killing over a million people each year by transmitting malaria, yellow fever, Zika and several other diseases. Yet of the 3,500 species of mosquito on Earth, only a few dozen of them are really dangerous—so that the question arises as to whether humans and their mosquito foe can learn to live peacefully with one another. Chapters assess polarizing arguments for conserving and preserving mosquitoes, as well as for controlling and killing them, elaborating on possible consequences of both strategies. This book provides informed answers to the dual question: could we eliminate mosquitoes, and should we? Offering insights spanning the technical to the philosophical, this is the “go to” book for exploring humanity's many relationships with the mosquito—which becomes a journey to finding better ways to inhabit the natural world. *Mosquitopia* will be of interest to anyone wanting to explore dependencies between human health and natural systems, while offering novel perspectives to health

planners, medical experts, environmentalists and animal rights advocates. The Open Access version of this book, available at <http://www.taylorfrancis.com/books/e/9781003056034>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license

Mosquitoes L. O. Howard, 2017-10-25 Excerpt from Mosquitoes: How They Live; How They Carry Disease; How They Are Classified; How They May Be Destroyed Among summer residents of the country, and especially near the sea-shore, even before the agency of mosquitoes in the spread of disease became established, and before it became a generally accepted fact. With the very per feet proof that the mosquitoes of the genus Anopheles are instrumental in the carriage of malaria, the interest became intensified, and the late discovery of our Army Yellow-fever Commission in Cuba, that a mosquito is the conveyor of yellow fever, has added to the general interest in the subject. In fact, the whole mosquito question is a live topic of the day. Knowledge of mosquito habits is more general than at any previous time, and almost every one is interested in the subject of mosquito extermination. With the knowledge which we now possess, it seems almost incredible that people should all these years have suffered, more or

less patiently, the tormenting bites of *Culex* and the insidious but more dangerous punctures of *Anopheles* without making the slightest effort to abate the nuisance and the danger, beyond slapping, in a revengeful way, at individual biters. In many places infested with mosquitoes nothing could be easier than to put a stop to the whole tormenting plague. In many other cases the problem is a more difficult one, but in even the worst cases, by a judicious effort, which should be a community effort, and by the expenditure of a greater or smaller amount of money, much relief can be gained. In fact, Mr. W. J. Matheson, of New York, was quite right when, in the summer of 1900, just before commencing a successful crusade against the mosquitoes on the north shore of Long Island, he wrote me that there. **Mosquitoes** L. O. Howard, 2015-07-21 Excerpt from  
Mosquitoes: How They Live; How They Carry Disease; How They Are Classified; How They May Be Destroyed Some years ago I was visiting a family in the mountains. It was during a dry season, and water was scarce. There were no swamps, no lakes or pools, and the drinking-water was taken from springs; yet mosquitoes were so plentiful that it was necessary to screen the porches, that sitting out of an evening might be made possible. I asked where the water came from in which they washed their clothes, and they replied, as expected, From a rain-water tank, which, as it happened, was situated under the porch. I investigated the tank and found it literally alive with mosquito larvae. A pint of kerosene stopped the breeding, and as the water was drawn from a faucet near the bottom of the tank the kerosene did not injure it. The indifference of this family as to the source of their local mosquito pest, or rather their combined ignorance of and indifference to the subject of the breeding-places, was at that time - and it was not so very long ago - characteristic of people in general. It was my good fortune, through the wide-spread newspaper accounts of my kerosene

experiments in the Catskill Mountains in 1892, to become more or less identified with many practical experiments in the destruction of mosquitoes from that time on. *Mosquito* Andrew Spielman, Michael D'Antonio, 2001 'Consider the most common mosquito on Earth. This soft, little, dusty-brown insect is *Culex Pipiens*. You've seen her land on your arm. You have caught her just at the end of her feeding, her translucent belly swelling red with your very own blood. At such a moment, you can be forgiven for failing to notice what an elegant and hardy thing she is. But she is . . . ' No creature has touched directly the lives of more human beings than the mosquito. She has been a nuisance,

a pollinator of plants and an angel of death all over the globe. And throughout history, much of our trouble with the mosquito has been caused by man himself. Professor Andrew Spielman has dedicated his life to understanding this insect. In *Mosquito* he tells the story of man's struggle to live with the mosquito, from the defeat of Sir Francis Drake's fleet, to the death of thousands of Frenchmen working on the Panama Canal and to the recent panic over the West Nile Virus in New York. And he shows us how we have accelerated the spread of disease, describing the catastrophic failures of mosquito control which have ensured that - even now - one person dies of malaria every twelve seconds.

Notes on the Mosquitoes of the United States Leland Ossian Howard, 2017-10-21 Excerpt from Notes on the Mosquitoes of the United States: Giving Some Account of Their Structure and Biology, With Remarks on Remedies The writer first became interested in mosquitoes, thirty years or more ago, when as a boy he fished and collected insects in the marshes at the head Of Cayuga Lake, New York, and as early as 1867 had experimented with the kerosene remedy against mosquito larvae in a horse trough at Ithaca. In 1881 he discussed with Dr. A. F. A. King and the late C. V. Riley the bearings Of the theory, which Dr. King was

the first to bring forward in the United States, Of the probable relation between mosquitoes and malaria, both Dr. Riley and the writer contending, it must be confessed, that the arguments brought forward by Dr. King in conversation were based upon coincidental Observations, and afforded no good proof Of cause and effect.

**Global Health Impacts of Vector-Borne Diseases** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Global Health, Forum on Microbial Threats, 2016-10-21 Pathogens transmitted among humans, animals, or plants by insects and arthropod vectors have been

responsible for significant morbidity and mortality throughout recorded history. Such vector-borne diseases – including malaria, dengue, yellow fever, and plague – together accounted for more human disease and death in the 17th through early 20th centuries than all other causes combined. Over the past three decades, previously controlled vector-borne diseases have resurged or reemerged in new geographic locations, and several newly identified pathogens and vectors have triggered disease outbreaks in plants and animals, including humans. Domestic and international capabilities to detect, identify, and effectively respond to vector-borne diseases are limited. Few vaccines have been developed against vector-borne pathogens. At the same time, drug resistance has developed in vector-borne pathogens while their vectors are increasingly resistant to insecticide controls. Furthermore, the ranks of scientists trained to conduct research in key fields including medical entomology, vector ecology, and tropical medicine have dwindled, threatening prospects for addressing vector-borne diseases now and in the future. In June 2007, as these circumstances became alarmingly apparent, the Forum on Microbial Threats hosted a workshop to explore the dynamic relationships among host, pathogen(s), vector(s), and

ecosystems that characterize vector-borne diseases. Revisiting this topic in September 2014, the Forum organized a workshop to examine trends and patterns in the incidence and prevalence of vector-borne diseases in an increasingly interconnected and ecologically disturbed world, as well as recent developments to meet these dynamic threats. Participants examined the emergence and global movement of vector-borne diseases, research priorities for understanding their biology and ecology, and global preparedness for and progress toward their prevention, control, and mitigation. This report summarizes the presentations and discussions from the workshop.

**Medical Proofs, Social Experiments** Catherine Will, Tiago

Moreira,2016-04-22 Clinical trials have become key technologies for decision making in the contemporary world. Their results shape medical practice and determine priorities across health care systems, but the work that goes into producing credible data is often hidden. *Medical Proofs, Social Experiments* draws upon detailed case studies to argue that to understand their value, we need to pay more attention to the contexts for these modern medical experiments, recovering the diverse ways in which they involve doctors, patients and the public, the local practices that contribute to their completion, and the complex negotiation of their results in professional and statutory institutions. Presenting research from the UK, USA, Sweden and The Netherlands, the ethnographic perspective adopted by the authors provides a space to explore the investments of different state, market, professional and other actors in particular forms of evaluation, and the ways in which trial methodologies may be re-designed or re-imagined to satisfy social and political expectations. As such, this volume will be of interest to those working in the fields of science and technology studies, the sociology and anthropology of medicine and researchers of policy and organisation in health care.

**The Value of Transnational Medical Research** Ann H. Kelly,P.

Wenzel Geissler, 2013-09-13 What is the value of medical research? With contributions from anthropologists, sociologists and activists, this approach brings into focus the forms of value – social, epistemic, and economic – that are involved in medical research practices and how these values intersect with everyday living. Though their work covers wide empirical ground – from HIV trials in Kenya and drug donation programs in Tanzania to industry-academic collaborations in the British National Health Service – the authors share a commitment to understanding the practices of medical research as embedded in both local social worlds and global markets. Their collective concern is to rethink the conventional ethical demarcations between paid and unpaid research services in light of the social and material organisation of medical research practices. . Rather than warn against economic incursions into medical knowledge and health practice, or, alternatively, the reduction of local experience to the standards of bioethics, we hope to illuminate the array of practices, knowledges, and techniques through which the value of medical research is brought into being. This book was originally published as a special issue of *Journal of Cultural Economy*.

Securitising Singapore Syed Mohammed Ad'ha

Aljunied,2019-07-15 Aljunied examines how the Singaporean government developed a comprehensive state–society strategic

relationship by ‘securitising’ vital policy areas because of Singapore’s vulnerability as a global city state. In the twenty-first century, the Singaporean government has strategically renewed an existing form of authoritarian rule by ‘militarising’ national security governance. The main objective is to widen and deepen state power. Senior military-trained civilian political leaders and bureaucrats use military personnel, command and control, terminology and strategy of war to deal with non-traditional security challenges leading to the state’s further domination over civil liberty and civil society. Aljunied analyses the information and communication, health and climate–environment sectors. The case studies highlight the way the Singaporean government has used varying forms of political engagement, surveillance and legislation to limit civil liberty and inhibit the development of civil society. This book is a valuable resource for researchers and students of Singapore Studies as well as for the readers of Security Studies with an interest in the global–local nexus in a small state context. It is a pioneering scholarly study on the national security framework and the use of non-traditional security discourse to strengthen state power and social stability at the expense of political liberalism.
