Constant Touch Jon Agar,2013-02-07 Mobile phones are a ubiquitous technology with a fascinating history. There are now as many mobile phones in the world as there are people. We carry them around with us wherever we go. And while we used to just speak into them, now mobiles are used to do all kinds of tasks, from talking to twittering, from playing a game to paying a bill. Jon Agar takes the mobile to pieces, tracing what makes it work, and puts it together again, showing how it was shaped in different national contexts in the United States, Europe, the Far East and Africa. He tells the story from the early associations with cars and the privileged, through its immense popular success, to the rise of the smartphone. Few scientific revolutions affect us in such a day-to-day way as the development of the mobile phone. Jon Agar's deft history explains exactly how this revolution has come about - and where it may lead in the future.

How Does a Touch Screen Work? Leon Gray,1900-01-01 It seems simple: tap the screen of your smartphone to open an app, or swipe your finger across the screen to make the smartphone do something else. However, that touch screen has been years in the making and is a complex piece of what is now essential technology. Readers will find out how layers of glass, metal, and LEDs work together to make a touch screen work. Full-color images augment explanations of different kinds of touch screens. Readers will be captivated by the many uses touch screens have in the world today, from controlling machinery in a factory to helping surgeons perform medical procedures.

Improving Smartphone's interaction for visually impaired and blind users Alex Cole,2013-04-09 Seminar paper from the year 2012 in the subject Business economics - Business Management, Corporate Governance, grade: A, The University of Liverpool, language: English, abstract: Abstract A great number of smart phones still are inadequately interactive with visually impaired and blind users and thesteps to providing access that actually exist does not give or sustain some of the tasks efficiently. This literature review presents some of the issues and gives different yet effective solutions and guidelines to improve the Smartphone's interface with visually impaired and blind users. CHAPTER 1: INTRODUCTION Nowadays, mobile devices allow the disabled people with many different opportunities to act independently in the world. However, these powerful and competent devices may have large number of interactivity challenges, especially for the people who are blind or visually impaired. Research and different studies proves that a blind or visually impaired person has better capability to rely on other senses most importantly the touch and audio

sensors. This literature review would be dealing with the analysis and studies of different interfaces for the blind and visually impaired patients, keeping in view the important points that favour the user in every way. Using the haptic concept, to elaborate the letters for the blind user while writing a text message or calling someone and an audio interface to direct and communicate between the phone and user. There are some problems that hinder blind users to interact with the Smartphonewhich includes screen touch, interface, text entry, navigation, individual differences and some other problems. There are no efforts that have been made to discover the control of touch or smart phones in non-visual mobile interface. In this lecture review, I am going to present some works that have been done recently about interacting challenges with Smartphone devices and blind people.
