License Plate Study for Wisconsin Department of Transportation Greg Geib, 2009 From July to November 2008, randomly sampled vehicle license plates from vehicles in Dane, Kenosha, Milwaukee, Ozaukee, Racine, Sheboygan, Washington, and Waukesha counties were recorded. Vehicles with Wisconsin auto or truck plates and also displaying stickers were surveyed in the study. Following the in-field data collection of license plates, the vehicle license plate and VIN were matched with a database of vehicle registrations provided by WisDOT. In total, 16,923 vehicle records were included in the analysis. In the study, each vehicle surveyed was categorized based on the following criteria: the sticker on the vehicle had been expired for more than 30 days at the time of data collection, the license plate sticker displayed a date that was more recent than the registration expiration date in the WisDOT vehicle registration database, and for trucks, the bottom point of the Gross Vehicle Weight Rating (GVWR) category was higher than the registered vehicle weight class. Overall, 2.3% of vehicles surveyed were categorized as having a sticker displayed which appeared to be expired for at least 30 days at the time of data collection. Also, 1.5% of vehicles surveyed were categorized as having a license plate sticker displayed on the vehicle during data collection with a date that was more recent than the registration expiration date in the WisDOT vehicle registration database. A comparison was also made between the Gross Vehicle Weight Rating (GVWR) category for trucks to the registered vehicle weight, with 7.3% of trucks surveyed categorized as having a bottom point of the GVWR category that was higher than the registered vehicle weight, from information provided in WisDOT registration data--Technical report documentation

Automatic Number Plate Recognition Fouad Sabry,2023-07-06 What Is Automatic Number Plate Recognition Automatic number-plate recognition is a technique that reads car registration plates by employing optical character recognition on photographs of the plates. This allows for the creation of data regarding the location of vehicles. It may make use of existing closed-circuit television, cameras installed for the purpose of enforcing road rules, or cameras that have been specifically created for the job. Law enforcement agencies all over the world make use of automatic number plate recognition (ANPR) technology for a variety of reasons, including checking to see if a vehicle is licensed or registered. It is also used for the electronic collection of tolls on roads that operate on a pay-per-use basis and as a tool for cataloguing the movements of traffic, for example by organizations responsible for highways. How You Will Benefit (I) Insights, and validations about the following topics: Chapter 1: Automatic number-plate recognition Chapter 2: Intelligent transportation system Chapter 3: Traffic enforcement camera Chapter 4: Electronic toll collection Chapter 5: Open road tolling Chapter 6: Video tolling Chapter 7: Automatic number-plate recognition in the United Kingdom Chapter 8: Under vehicle inspection Chapter 9: LIDAR traffic enforcement Chapter 10: Domain Awareness System (II) Answering the public top questions about automatic number plate recognition. Naughty Number Plates S. Bedwell,2012 Naughty Number Plates is a hilarious look at personalized number plates that are banned for being too risqué, explicit and downright dumb. Personalized number plates are inspired by many factors. Many desire to stand out from the crowd, make a statement and reflect something of their owners' personalities. Others are just rude, crude and offensive, which is why they're rejected. Enjoy the plates and the smart remarks by well known comedian Steve Bedwell.

Tales from the Back Bumper Christopher

Garrish,2013-05-01 Buckle up your seatbelt and prepare for a ride on the history highway! Christopher Garrish has collected hundreds of facts and photos (not to mention licence plates) in this astonishing assembly of motoring madness. Discover what the earliest motorists in the province used to build their own licence plates; why some licence plate numbers are worth waiting in line overnight for; which offensive acronym slipped under the radar and found its way onto a licence plate before authorities recalled it; and dozens of other entertaining anecdotes. Whether you're a car connoisseur or a tailgating trucker, you'll find that Tales from the Back Bumper is more than just an ABC-123 account of licence plates. This book is not only the definitive guide to everything from plate prefixes and decals to provincial slogans and vanity plates, but also a fascinating, behind-the-scenes look at how cars—and by extension licence plates—have played a part in our exploration and navigation of “Beautiful British Columbia” for the past hundred years.

A Real-Time Implementation of License Plate Recognition (LPR) System Santosh Kumar

Sahoo, 2018-03-07 Master's Thesis from the year 2010 in the subject Engineering - Computer Engineering, grade: A+, Gandhi Institute of Engineering and Technology, language: English, abstract: With increasing number of population and higher rate of development the problem of road accident is also increasing rapidly. So the basic concept is to develop a model that can be useful as a security system in the society and can monitor the vehicle speed. A License Plate Recognition (LPR) System is one kind of an Intelligent Transport monitoring System and is of considerable interest because of its potential applications in highway electronic toll collection and traffic monitoring systems. This type of applications puts high demands on the reliability of an LPR System. A lot of work has been done regarding LPR systems for Korean, Chinese, European and US license plates that generated many commercial products. However, little work has been done for Indian license plate recognition systems. The purpose of this thesis was to develop a real time application which recognizes license plates from cars at a gate, for example at the entrance of a parking area or a border crossing. The system, based on regular PC with video camera, catches video frames which include a visible car license plate and processes them. Once a license plate is detected, its digits are recognized, displayed on the User Interface or checked against a database. The focus is on the design of algorithms used for extracting the license plate from a single image, isolating the characters of the plate and

identifying the individual characters. The proposed system has been implemented using Vision Assistant 7,1 and LabVIEW 7,1. The performance of the system has been investigated on real images of about 100 vehicles. The recognition of about 98% vehicles shows that the system is quite efficient.
