Roman Numbers Do-me Workbook,2018-01-29 If there is one alternative number systems everyone should learn, it's the Roman number system. It's the only other number system used today, although it's usually only found in decorative or customary locations, such as clocks, inscriptions and movie credits. If possible, find something in regular use that displays a Roman number and start a discussion with the students about why it might have been designed that way. This worksheet provides three different exercises having to do with Roman number conversion. The first two provide practice in converting from and to the Roman number system. The third is a math problem expressed in Roman. The student will have to convert the values to Arabic, compute the answer, then convert the answer back into Roman.

Introduction to Logic Circuits & Logic Design with Verilog Brock J. LaMeres,2023-10-19 This textbook for courses in Digital Systems Design introduces students to the fundamental hardware used in modern computers. Coverage includes both the classical approach to digital system design (i.e., pen and paper) in addition to the modern hardware description language (HDL) design approach (computer-based). Using this textbook enables readers to design digital systems using the modern HDL approach, but they have a broad foundation of knowledge of the underlying hardware and theory of their designs. This book is designed to match the way the material is actually taught in the classroom. Topics are presented in a manner which builds foundational knowledge before moving onto advanced topics. The author has designed the presentation with learning goals and assessment at its core. Each section addresses a specific learning outcome that the student should be able to “do” after its completion. The concept checks and exercise problems provide a rich set of assessment tools to measure student performance on each outcome.

TCP/IP Foundations Andrew G. Blank,2006-02-20 The world of IT is always evolving, but in every area there are stable, core concepts that anyone just setting out needed to know last year, needs to know this year, and will still need to know next year. The purpose of the Foundations series is to identify these concepts and present them in a way that gives you the strongest possible starting point, no matter what your endeavor. TCP/IP Foundations provides essential knowledge about the two protocols that form the basis for the Internet, as well as many other networks. What you learn here will benefit you in the short term, as you acquire and practice your skills, and in the long term, as you use them. Topics covered include: The origins of TCP/IP and the Internet The layers comprising the OSI and DoD models TCP/IP addressing Subnet masks Creating custom subnet masks Supernetting and Classless Inter-Domain Routing (CIDR) Name resolution The Domain Name System (DNS) and Dynamic DNS Windows Internet Naming Services (WINS) The Dynamic Host Configuration Protocol (DHCP) What to expect with IPv6
