The Cholesterol Delusion Ernest N. Curtis, 2010-11 Approximately one-half of the adult population of the United States are being told that they harbor within their bodies a silent killer. This killer is cholesterol. Millions are prescribed cholesterol lowering drugs making these pills the most prescribed (and most profitable) medications in the history of American medicine. They are told that these drugs will protect them from the ravages of heart disease. This is patently untrue and can be easily demonstrated by critical analysis of the data presented in the very medical studies that purport to show their benefit. The cholesterol mania that has gripped the country and dominated mainstream medical thought for the past 40 years is based on widespread acceptance of a set of closely related theories variously called the Cholesterol Theory, the Lipid Hypothesis, or the Diet-Heart Theory. The Cholesterol Delusion systematically refutes these prevailing theories that link diet and blood cholesterol levels to coronary heart disease and heart attacks. The Cholesterol Delusion traces the development of these theories from their origins and shows that each step in their evolution was based on faulty evidence and unscientific reasoning. The book then takes it one step further and attacks the very foundation of the risk factor paradigm that has dominated cardiovascular research in particular and much of medical research in general for the past 50 years. Written in plain language for the intelligent layman, the arguments are presented in a way that can be easily understood by readers with a limited medical or technical background. The Cholesterol Delusion is must reading for anyone that has been told they have elevated cholesterol levels and/or must take medication to lower them.

Beyond Cholesterol Julius Torelli, George Ryan, 2005-10 The information you need to determine how healthy your heart is: c-reactive protein, fibrinogen, homocysteine, fasting insulin, ferritin, lipoprotein (a), calcium heart scan--Cover

Cholesterol and Beyond A. Stewart Truswell, 2010-06-22 "Only once in a great while does a book come along that really does the job in addressing a major medical issue. When this happens, all can be joyful... Readers will find ALL their favorite dietary puzzlements dealt with... With consummate scholarship, clarity and brevity, Truswell sifts out the chaff and identifies the critical questions, the responsible investigators, and the key studies." So says Emeritus Professor Henry Blackburn from the University of Minnesota in the foreword to this remarkable concise book on the history of research on diet and heart disease. This was a theme of scientific, medical and public interest in the 20th Century, a century marked by the rise and fall of coronary heart disease as the major cause of death in the first world, followed by the rise of this cause of death in the developing world. There is obviously much to learn, and this book is an excellent starting point, tracing dietary factors and their role in heart disease one by one: fats, sugar, salt, alcohol, coffee, trans-fats, etc. Without an understanding of the role of diet and the changes that have been seen in the North American and NW European diet, the story of the decline in the heart disease death rate may have been very different.

The Great Cholesterol Myth Jonny Bowden, Stephen Sinatra, 2012-11-01 Heart disease is the #1 killer. However, traditional heart disease protocols--with their emphasis on lowering cholesterol--have it all wrong. Emerging science is showing that cholesterol levels are a poor predictor of heart disease and that standard prescriptions for lowering it, such as ineffective low-fat/high-carb diets and serious, side-effect-causing statin drugs, obscure the real causes of heart disease. Even doctors at leading institutions have been misled for years based on creative reporting of research results from pharmaceutical companies intent on supporting the \$31-billion-a-year cholesterol-lowering

drug industry. The Great Cholesterol Myth reveals the real culprits of heart disease, including: - Inflammation - Fibrinogen - Triglycerides - Homocysteine - Belly fat - Triglyceride to HCL ratios - High glycemic levels

Bestselling health authors Jonny Bowden, Ph.D., and Stephen Sinatra, M.D. give readers a 4-part strategy based on the latest studies and clinical findings for effectively preventing, managing, and reversing heart disease, focusing on diet, exercise, supplements, and stress and anger management. Get proven, evidence-based strategies from the experts with The Great Cholesterol Myth.

MYTHS VS. FACTS

Myth-High cholesterol is the cause of heart disease. Fact-Cholesterol is only a minor player in the cascade of inflammation which is a cause of heart disease. Myth-High cholesterol is a predictor of heart attack. Fact-There is no correlation between cholesterol and heart attack. Myth-Lowering cholesterol with statin drugs will prolong your life. Fact-There is no data to show that statins have a significant impact on longevity. Myth-Statin drugs are safe. Fact-Statin drugs can be extremely toxic including causing death. Myth-Statin drugs are useful in men, women and the elderly. Fact-Statin drugs do the best job in middle-aged men with coronary disease. Myth-Statin drugs are useful in middle-aged men with coronary artery disease because of its impact on cholesterol. Fact-Statin drugs reduce inflammation and improve blood viscosity (thinning blood). Statins are extremely helpful in men with low HDL and coronary artery disease. Myth-Saturated fat is dangerous. Fact-Saturated fats are not dangerous. The killer fats are the trans fats from partially hydrogenated oils. Myth-The higher the cholesterol, the shorter the lifespan. Fact-Higher cholesterol protects you from gastrointestinal disease, pulmonary disease and hemorrhagic stroke. Myth-A high carbohydrate diet protects you from heart disease. Fact-Simple processed carbs and sugars predispose you to heart disease. Myth-Fat is bad for your health. Fact-Monounsaturated and saturated fats protect you from metabolic syndrome. Sugar is the foe in cardiovascular disease. Myth-There is good (HDL) cholesterol and bad (LDL) cholesterol. Fact-This is over-simplistic. You must fractionate LDL and HDL to assess the components. Myth-Cholesterol causes heart disease. Fact-Cholesterol is only a theory in heart disease and only the small component of LP(a) or "bb shot" LDL predisposes one to oxidation and inflammation.

The Great Cholesterol Con Dr Malcolm Kendrick, 2008-07-07 Statins are widely prescribed to lower blood cholesterol levels and claim to offer unparalleled protection against heart disease. Believed to be completely safe and capable of preventing a whole series of other conditions, they are the most profitable drug in the history of medicine. In this groundbreaking book, GP Malcolm Kendrick exposes the truth behind the hype. He will change the way we think about cholesterol forever. Rubbishing the diet-heart hypothesis, in which clinical trials 'prove' that high cholesterol causes heart disease and a high-fat diet leads to heart disease, Kendrick lambastes a powerful pharmaceutical industry and unquestioning medical profession, who, he claims, perpetuate the madcap concepts of 'good' and 'bad' cholesterol and cholesterol levels to convince millions of people to unnecessarily spend billions of pounds on statins. Clearly and comprehensively debunking assumptions on what constitute a healthy lifestyle and diet, *The Great Cholesterol Con* is the accessible, indispensable and absorbing case against statins and for a more common-sense approach to heart disease and general wellbeing. No more over-hyped miracle drugs; no more garlic, red wine, anti-oxidants, fruit or vegetables; even a vegetarian diet is rejected in this controversial yet authoritative critique of how we have been misled over how food and drugs affect our coronary health. Here, for the first time, is the invaluable guide for anyone who thought there was a miracle cure for heart disease, *The Great Cholesterol Con* is a fascinating breakthrough that will set dynamite under the whole area.

Mann, 1993 In this text, an international group of distinguished scientists expose the fallacy and commercial exploitation that has resulted in the developments of, for example, regulatory agencies turning a blind eye to fraudulent claims by manufacturers of margarine, vegetable oil and crisps.

High Density Lipoproteins, Dyslipidemia, and Coronary Heart Disease Ernst J. Schaefer, 2010-03-10 This innovative book focuses on HDL and its relationships to triglyceride-rich
