  Pediatric Rheumatology for the Practitioner J. C. Jacobs,2013-03-09 Comprehensive ManualS' in Pediatrics are designed to broaden the practitioner's clinical scope by providing a wide range of diagnostic and management skills ordi narily considered to be the exclusive domain of the specialists. Although the series as a whole constitutes a comprehensive text in pediatrics, each volume stands on its own as a self-contained reference for the busy practitioner. In order to maintain a uniform style and coverage of each subject, each manual is usually written by no more than one or two authors. Each author is an acknowl edged expert in his or her field and provides a comprehensive, up-to-date account of the topic under discussion. Practically oriented, each volume offers concise guidelines and courses of treatment. Michael Katz E. Richard Stiehm Foreword Subspecialization in internal medicine and pediatrics is a relatively recent phe nomenon. When Dr. Jerry C. Jacobs began to develop his special interest in rheu matic disease approximately 25 years ago, there was a handful of pediatricians working in the field, and rheumatology was only slightly less strange than phre nology as a term for a discipline of modern medicine. For better or worse, rheu matology is an established subspecialty. Textbooks have been designed for the internist/rheumatol

Advanced Materials and Components for 5G and Beyond Colin Tong,2022-11-16 This book provides a comprehensive introduction to the current status and future trends of materials and component design for fifth-generation (5G) wireless communications and beyond. Necessitated by rapidly increasing numbers of mobile devices and data volumes, and acting as a driving force for innovation in information technology, 5G networks are broadly characterized by ubiquitous connectivity, extremely low latency, and very high-speed data transfer. Such capabilities are facilitated by nanoscale and massive multi-input multi-output (MIMO) with extreme base station and device densities, as well as unprecedented numbers of antennas. This book covers semiconductor solutions for 5G electronics, design and performance enhancement for 5G antennas, high frequency PCB materials and design requirements, materials for high frequency filters, EMI shielding materials and absorbers for 5G systems, thermal management materials and components, and protective packaging and sealing materials for 5G devices. It explores fundamental physics, design, and engineering aspects, as well as the full array of state-of-the-art

applications of 5G-and-beyond wireless communications. Future challenges and potential trends of 5G-and-beyond applications and related materials technologies are also addressed. Throughout this book, illustrations clarify core concepts, techniques, and processes. At the end of each chapter, references serve as a gateway to the primary literature in the field. This book is essential reading for today's students, scientists, engineers and professionals who want to understand the current status and future trends in materials advancement and component design in 5G and beyond, and acquire skills for selecting and using materials and 5G component design that takes economic and regulatory aspects into account.

IVIG Therapy Today Mark Ballow,2012-12-06 It has been little more than a century since Emil von Behring and his colleagues (1890) showed that the blood of tetanus-immune rabbits contained a factor that could be transferred to nonimmune animals to protect them against tetanus. These observations, together with the work of Paul Ehrlich, started scientists on the long and complex path to our present understanding of the humoral, or B-cell, immune system. These early studies led to Nobel prize awards for von Behring (1901) and Ehrlich (1908), each of whom contributed much to our knowledge of the B-cell immune system. In the early 20th century it was recognized that the serum of individuals who had recently suffered an infection contained a protective humoral factor that could be transferred to a nonimmune person, thereafter affording that individual protection against the infectious agent that had caused disease. In 1933 McKhann and Chu reported that a placental extract containing the globulin fraction could modify measles. However, it was not until 1939 that Tiselius and Kabat demonstrated that the antibodies responsible for protection against these infectious disorders resided within the gammaglobulin plasma fraction. In a major step forward, Cohn in 1944 established a method for the fractionation and purification of this plasma gammaglobulin fraction. These procedures, which are based on cold ethanol precipitation of plasma, produce a readily adaptable, large-scale fractionation procedure that is still utilized to this day in the preparation of commercial gammaglobulin.

The Immunopathology of Lymphoreticular Neoplasms J. Twomey,2012-12-06 Until recently, understanding of the lymphomas was limited and largely descriptive. Attention has been focused, for the most part, upon morphological issues and clinical matters. Although useful, this approach has many shortcomings. The true cytoidentity of primary neoplastic cells was not established by these methods, nor could their clonal nature be recognized. The more overt changes in immunological function, such as monoclonal gammopathies and immunodeficiencies, were appre ciated as important components of these diseases. However, subtle immunological perturbations were not recognized. Furthermore, associations were not established between the lymphoreticular neoplasms on the one hand and both primary and secondary immunological

abnormalities on the other. There has been considerable recent progress in the fields of immunobiology, cytology, and immunochemistry. These new approaches have proved readily applicable to studies on the lymphomas. The term lymphoma has been applied to a heterogeneous group of neo plasms that involve lymphoid tissues. This term is not altogether satisfactory, since it implies that cells of primarily the lymphoid series are involved in the neoplastic process. Some neoplasms, heretofore classified as lymphomas, now appear, from the results of penetrating analysis using newer methodology, to be malignan cies of the macrophage series, rather than of the lymphocytic series. These neo plasms include Hodgkin's disease and a minority of neoplasms previously referred to as histiocytic lymphomas. The majority of these histiocytic lymphomas are now known to be lymphoid malignancies involving the B-cell series.

Remote Cooperation: CSCW Issues for Mobile and Teleworkers Alan J. Dix,Russell Beale,2012-12-06 Computer supported work is increasingly being done out of the traditional office environment, for example whilst travelling or at home and there is a growing need to support the cooperative aspects of such work. Remote Cooperation looks at ways of improving the available communications, through the use of packet radio and compression techniques, in order to reduce the imbalance between office-based and mobile workers. It also assesses how the effectiveness of the existing communications infrastructure can be improved, by providing cooperative applications which fit within its limitations. Broadly divided into five sections - social and economic context, application domains, software technology and infrastructure, communications technology and infrastructure, working and learning from home - this volume contains contributions from both the research community and industry.
