understood in ethical terms as a safeguard for personality rights such as human dignity and privacy. This volume investigates whether the economic value of personal data can be realized without compromising privacy, fairness and contextual integrity. It brings scholars and scientists from the disciplines of computer science, law and social science together with policymakers, engineers and entrepreneurs with practical experience of implementing personal data management. The resulting collection will be of interest to anyone concerned about privacy in our digital age, especially those working in the field of personal information management, whether academics, policymakers, or those working in the private sector.

Improving the Performance of Sponsorship Ardi Kolah, 2015-06-12 Without a doubt, sponsorship is one of the most powerful promotional tools we have in the business of brand creation, brand recognition, and ultimately increasing sales. Moreover, brokering sponsors is a significant business in and of itself, something we often overlook. Considering sponsorship is a \$50 billion a year market--and growing--marketers and students of business ignore its potential at the risk of missing hugely lucrative opportunities. To fail to understand sponsorship is to fail to understand marketing. If you're looking for an introduction to this topic, most books available only address sports sponsorship: the largest section of the market perhaps, but by no means the only one. Kolah's *Improving the Performance of Sponsorship* is a guide that examines all types of sponsorship, clearly explaining and defining its mechanics, advising on how to select the right properties, how to sell sponsorship, ethical issues, measurement and key legal principles. This book is all keen marketers will need for a thorough understanding of how sponsorship works.

The Customer Copernicus Charlie Dawson, Seán Meehan, 2021-05-16 Some companies are great for customers – not only do they care but they change whole markets to work better for the customers they serve. Think of Amazon, easyJet and Sky. They make things easier and improve what really matters – obvious, surely? They have also enjoyed huge business success, growing and making plenty of money. *The Customer Copernicus* answers the question that follows – if it's obvious and attractive why is it so rare? And then it answers a second question, because Tesco, O2 and Wells Fargo were like this once. Why, having mastered it, would you ever stop? Because all three did, and two ended up in court. *The Customer Copernicus* explains how to become and how to stay customer-led. Essential reading for leaders and teams who want their organisations to stay competitive by developing a more purposeful and innovative culture.

Probability, Statistics, and Queueing Theory Arnold O. Allen, 1990-08-28 This is a textbook on applied probability and statistics with computer science applications for students at the upper undergraduate level. It may also be used as a self study book for the practicing computer science professional. The successful first edition of this book proved extremely useful to students who need to use probability, statistics and queueing theory to solve problems in other fields, such as engineering, physics, operations research, and management science. The book has also been successfully used for courses in queueing theory for operations research students. This second edition includes a new chapter on regression as well as more than twice as many exercises at the end of each chapter. While the emphasis is the same as in the first edition, this new book makes more extensive use of available personal computer software, such as Minitab and Mathematica.

Priority Queues by N K Jaiswal Anatoli Torokhti, Phil Howlett, 1968-02-12 In this book, we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems. A number of computing techniques are considered, such as methods of operator approximation with any given accuracy; operator interpolation techniques including a non-Lagrange interpolation; methods of system representation subject to constraints associated with concepts of causality, memory and stationarity; methods of system representation with an accuracy that is the best within a given class of models; methods of covariance matrix estimation; methods for low-rank matrix approximations; hybrid methods based on a combination of iterative procedures and best operator approximation; and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory. As a result, the book represents a blend of new methods in general computational analysis, and specific, but also generic, techniques for study of systems theory and its particular branches, such as optimal filtering and information compression. - Best operator approximation, - Non-Lagrange interpolation, - Generic Karhunen-Loeve transform - Generalised low-rank matrix approximation

- Optimal data compression - Optimal nonlinear filtering

Regulation of Tissue Oxygenation, Second Edition Roland N.

Pittman, 2016-08-18 This presentation describes various aspects of the regulation of tissue oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system. The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries. The cardiovascular system then moves the oxygenated blood from the heart to the microcirculation of the various organs by convection, where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal cells of each tissue by diffusion. Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate (ATP), the energy currency of all cells. The mitochondria are able to produce ATP until the oxygen tension or P_{O_2} on the cell surface falls to a critical level of about 4–5 mm Hg. Thus, in order to meet the energetic needs of cells, it is important to maintain a continuous supply of oxygen to the mitochondria at or above the critical P_{O_2} . In order to accomplish this desired outcome, the cardiorespiratory system, including the blood, must be capable of regulation to ensure survival of all tissues under a wide range of circumstances. The purpose of this presentation is to provide basic information about the operation and regulation of the cardiovascular and respiratory systems, as well as the properties of the blood and parenchymal cells, so that a fundamental understanding of the regulation of tissue oxygenation is achieved.

Stochastic Methods in Economics and Finance A.G. Malliaris, 1982 Theory and application of a variety of mathematical techniques in economics are presented in this volume. Topics discussed include: martingale methods, stochastic processes, optimal stopping, the modeling of uncertainty using a Wiener process, Itô's Lemma as a tool of stochastic calculus, and basic facts about stochastic differential equations. The notion of stochastic ability and the methods of stochastic control are discussed, and their use in economic theory and finance is illustrated with numerous applications. The applications covered include: futures, pricing, job search, stochastic capital theory, stochastic economic growth, the rational expectations hypothesis, a stochastic macroeconomic model, competitive firm under price uncertainty, the Black-Scholes option pricing theory, optimum consumption and portfolio rules, demand for index bonds, term structure of interest rates, the market risk adjustment in project valuation, demand for cash balances and an asset pricing model.
