Julian G. Pepperell

Fishes of the Great Barrier Reef and Coral Sea John E. Randall, Gerald R. Allen, Roger C.

Steene, 1997

Fishes of the Open Ocean Julian G. Pepperell, 2010 Between the surface of the sea and depths of two hundred meters lies a remarkable range of fish, generally known as pelagics, or open-ocean dwellers. These creatures are among the largest, fastest, highest-leaping, and most migratory fish on the entire planet. Beautifully adapted to their world, they range from tiny drift fish and plankton-straining whale sharks to more streamlined predators such as tuna, marlin, sailfish, and wahoo. *Fishes of the Open Ocean*, from leading marine biologist and world authority on the subject Julian Pepperell, is the first book to comprehensively describe these fishes and explore the complex and often fragile world in which they live. In what will be the definitive book on the subject for years to come--and, with over three hundred color images, the most lavishly produced as well--Pepperell details the environment and biology of every major species of fish that inhabit the open ocean, an expanse that covers 330 million cubic

miles and is the largest aquatic habitat on the Earth. The first section of the book introduces the various evolutionary forms these fish have taken, as well as the ways in which specific species interact and coevolve with others in the food web. A chapter on commercial and sport fisheries explores the human element in this realm and considers such issues as sustainability, catch-and-release initiatives, and the risks of extinction. The second section of the book provides species accounts of open ocean dwellers organized by group, with overviews and general descriptions that are inclusive of range and distribution, unique physiological and morphological attributes, and the role of each species within its ecosystem. Global distribution maps, original illustrations from renowned artist and scientist Guy Harvey, and truly stunning images from some of the world's leading underwater photographers round out this copiously illustrated volume.

Fishes of the Great Barrier Reef and Coral Sea, Revised and Expanded Edition John E.

Randall, Gerald Robert Allen, Roger C. Steene, 1998-03-01 This is a long-overdue revision and expansion of what has become a classic book in marine literature. This lavishly illustrated volume

provides exhaustive coverage of more than 90 percent of the region's reef fishes. Every species is thoroughly illustrated, including photographs of the juvenile, female and male in species that vary in appearance during their development. Besides the wide array of underwater and diagnostic laboratory photographs, the book also contains seven plates painted by the talented natural-history artist Roger Swainston. With an additional 32 pages and 90 photos (covering 60 new species in all), this revised and expanded edition will enable even a beginning layman to identify most of the region's reef fishes. Divers, anglers, underwater naturalists and professional biologists are equally catered to.

Owls of the Eastern Ice Jonathan C. Slaght, 2020-08-04 A New York Times Notable Book of 2020 Longlisted for the National Book Award Winner of the PEN/E.O. Wilson Literary Science Writing Award and the Minnesota Book Award for General Nonfiction A Finalist for the Stanford Dolman Travel Book

of the Year Award Winner of the Peace Corps Worldwide Special Book Award A Best Book of the Year: NPR, The Wall Street Journal, Smithsonian, Minneapolis Star-Tribune, The Globe and Mail, The BirdBooker Report, Geographical, Open Letter Review Best Nature Book of the Year: The Times (London) A terrifically exciting account of [Slaght's] time in the Russian Far East studying Blakiston's fish owls, huge, shaggy-feathered, yellow-eyed, and elusive birds that hunt fish by wading in icy water . . . Even on the hottest summer days this book will transport you." —Helen Macdonald, author of *H is for Hawk*, in *Kirkus* I saw my first Blakiston's fish owl in the Russian province of Primorye, a coastal talon of land hooking south into the belly of Northeast Asia . . . No scientist had seen a Blakiston's fish owl so far south in a hundred years . . . When he was just a fledgling birdwatcher, Jonathan C. Slaght had a chance encounter with one of the most mysterious birds on Earth. Bigger than any owl he knew, it looked like a small bear with decorative feathers. He snapped a quick photo and shared it with experts. Soon he was on a five-year journey, searching for this enormous, enigmatic creature in the lush, remote forests of eastern Russia. That first sighting set his calling as a scientist. Despite a

wingspan of six feet and a height of over two feet, the Blakiston's fish owl is highly elusive. They are easiest to find in winter, when their tracks mark the snowy banks of the rivers where they feed. They are also endangered. And so, as Slaght and his devoted team set out to locate the owls, they aim to craft a conservation plan that helps ensure the species' survival. This quest sends them on all-night monitoring missions in freezing tents, mad dashes across thawing rivers, and free-climbs up rotting trees to check nests for precious eggs. They use cutting-edge tracking technology and improvise ingenious traps. And all along, they must keep watch against a run-in with a bear or an Amur tiger. At the heart of Slaght's story are the fish owls themselves: cunning hunters, devoted parents, singers of eerie duets, and survivors in a harsh and shrinking habitat. Through this rare glimpse into the everyday life of a field scientist and conservationist, *Owls of the Eastern Ice* testifies to the determination and creativity essential to scientific advancement and serves as a powerful reminder of the beauty, strength, and vulnerability of the natural world.

Plastic Soup Michiel Roscam Abbing, 2019-04 Plastics have transformed every aspect of our lives.

Yet the very properties that make them attractive--they are cheap to make, light, and durable--spell disaster when trash makes its way into the environment. *Plastic Soup: An Atlas of Ocean Pollution* is a beautifully-illustrated survey of the plastics clogging our seas, their impacts on wildlife and people around the world, and inspirational initiatives designed to tackle the problem. With striking photography and graphics, *Plastic Soup* brings plastic pollution to brilliant life for readers. According to some estimates, if we continue on our current path, the oceans will contain more plastic than fish by the year 2050. Created to inform and inspire readers, *Plastic Soup* is a critical tool in the fight to reverse this trend.

Red Gold Jennifer E. Telesca,2020-04-21 Illuminating the conditions for global governance to

have precipitated the devastating decline of one of the ocean's most majestic creatures. The International Commission for the Conservation of Atlantic Tunas (ICCAT) is the world's foremost organization for managing and conserving tunas, seabirds, turtles, and sharks traversing international waters. Founded by treaty in 1969, ICCAT stewards what has become under its tenure one of the planet's most prominent endangered fish: the Atlantic bluefin tuna. Called "red gold" by industry insiders for the exorbitant price her ruby-colored flesh commands in the sushi economy, the giant bluefin tuna has crashed in size and number under ICCAT's custodianship. With regulations to conserve these sea creatures in place for half a century, why have so many big bluefin tuna vanished from the Atlantic? In *Red Gold*, Jennifer E. Telesca offers unparalleled access to ICCAT to show that the institution has faithfully executed the task assigned it by international law: to fish as hard as possible to grow national economies. ICCAT manages the bluefin not to protect them but to secure export markets for commodity empires—and, as a result, has become complicit in their extermination. The decades of regulating fish as commodities have had disastrous consequences. Amid the mass

extinction of all kinds of life today, Red Gold reacquaints the reader with the splendors of the giant bluefin tuna through vignettes that defy technoscientific and market rationales. Ultimately, this book shows, changing the way people value marine life must come not only from reforming ICCAT but from transforming the dominant culture that consents to this slaughter.

Green Swans John Elkington, 2020-04-07 Even leading capitalists admit that capitalism is broken. Green Swans is a manifesto for system change designed to serve people, planet, and prosperity. In his twentieth book, John Elkington—dubbed the “Godfather of Sustainability”—explores new forms of capitalism fit for the twenty-first century. If Nassim Nicholas Taleb’s “Black Swans” are problems that can take us exponentially toward breakdown, then “Green Swans” are solutions that take us

exponentially toward breakthrough. The success—and survival—of humanity now depends on how we rein in the first and accelerate the second. *Green Swans* draws on Elkington’s firsthand experience in some of the world’s best-known boardrooms and C-suites. Using case studies, real-world examples, and profiles on emergent technologies, Elkington shows how the weirdest “Ugly Ducklings” of today’s world may turn into tomorrow’s world-saving Green Swans. This book is a must-read for business leaders in corporations great and small who want to help their businesses survive the coming shift in global priorities over the next decade and expand their horizons from responsibility, through resilience, and onto regeneration.

Changing Planes Ursula K. Le Guin, Eric Beddow, 2014-03-04 Winner of the PEN/Malamud Award for Short Story A New York Times Notable Book In these “vivid, entertaining, philosophical dispatches” (San Francisco Chronicle), literary legend Le Guin weaves together influences as wide-reaching as Borges, *The Little Prince*, and *Gulliver’s Travels* to examine feminism, tyranny, mortality and immortality, art, and the meaning—and mystery—of being human. Sita Dulip has missed her flight out of Chicago. But instead of listening to garbled announcements in the airport, she’s found a method of bypassing the crowds at the desks, the nasty lunch, the whimpering children and punitive parents, and the blue plastic chairs bolted to the floor: she changes planes. Changing planes—not airplanes, of course, but entire planes of existence—enables Sita to visit societies not found on Earth. As “Sita

Dulip's Method" spreads, the narrator and her acquaintances encounter cultures where the babble of children fades over time into the silence of adults; where whole towns exist solely for holiday shopping; where personalities are ruled by rage; where genetic experiments produce less than desirable results. With "the eye of an anthropologist and the humor of a satirist" (USA Today), Le Guin takes readers on a truly universal tour, showing through the foreign and alien indelible truths about our own human society.
