Lean Manufacturing Systems and Cell Design J. Temple Black, Steve L. Hunter, 2003 Readers will learn how to integrate quality and reliability control, machine tool maintenance, production and inventory control, and suppliers into the linked-cell system for one-piece parts movement within cells and small-lot movement between cells.

Stem Cell Manufacturing Joaquim M. S. Cabral, Claudia Lobato da Silva, Lucas G. Chase, Maria Margarida Diogo, 2016-07-24 Stem Cell Manufacturing discusses the required technologies that enable the transfer of the current laboratory-based practice of stem cell tissue culture to the clinic environment as therapeutics, while concurrently achieving control, reproducibility, automation, validation, and safety of the process and the product. The advent of stem cell research unveiled the therapeutic potential of stem cells and their derivatives and increased the awareness of the public and scientific community for the topic. The successful manufacturing of stem cells and their derivatives is expected to have a positive impact in the society since it will contribute to widen the offer of therapeutic solutions to the patients. Fully defined cellular products can be used to restore the structure and function of damaged tissues and organs and to develop stem cell-based cellular therapies for the treatment of cancer and hematological disorders, autoimmune and other inflammatory diseases and genetic disorders. Presents the first 'Flowchart' of stem cell manufacturing enabling easy understanding of the various processes in a sequential and coherent manner Covers all bioprocess technologies required for the transfer of the bench findings to the clinic including the process components: cell signals, bioreactors, modeling, automation, safety, etc. Presents comprehensive coverage of a true multidisciplinary topic by bringing together specialists in their particular area Provides the basics of the processes and identifies the issues to be resolved for large scale cell culture by the bioengineer Addresses the critical need in bioprocessing for the successful delivery of stem cell technology to the market place by involving professional engineers in sections of the book

Biological, Physical and Technical Basics of Cell Engineering Gerhard M. Artmann, Aysegül Artmann, Azhar A. Zhubanova, Ilya Digel, 2018-04-11 This book presents and discusses recent scientific progress on Cell and Stem Cell Engineering. It predominantly focuses on Biological, Physical and Technical Basics, and features new trends of research reaching far into the 21st century.

One-Piece Flow Kenichi Sekine, 2005-03-15 By reconfiguring your traditional assembly lines into production cells based on one-piece flow, you can drastically reduce your lead time, staffing requirements, and number of defects. Kenichi Sekine studied under the late Shigeo Shingo and is responsible for many recent advances in the deployment of the Toyota Production System in Japan. In this comprehensive book, Sekine provides an in-depth education into the why's and how's of the restructuring process. Sekine first examines the basic principles of process flow building, then offers detailed case studies of how various industries designed unique one-piece flow systems (parallel, L-shaped, and U-shaped floor plans) to meet their particular needs. One-Piece Flow describes each step in the process of establishing one-piece flow and: (1) provides ample test your skills worksheets that guide you through the solution of problems, and (2) includes over 300 illustrations and 14 single-page case studies that show how to cut assembly personnel in various industries. With this book, plant managers will learn how to eliminate overstaffing waste and build a multi-skilled work force equipped to support JIT manufacturing. The book includes: Basic concept of one-piece production Case studies Process razing techniques U-shaped cells for assembly lines Techniques for removing waste from factories Establishing one-piece flow at a factory that produces small lots on a customer-order basis Single delivery at MYNAC

Reorganizing the Factory Nancy Hyer, Urban Wemmerlov, 2001-10-22 Winner of the 2003 Shingo Prize! Reorganizing work processes into cells has helped many organizations streamline operations, shorten lead times, increase quality, and lower costs. Cellular manufacturing is a powerful concept that is simple to understand; however, its ultimate success depends on deciding where cells fit into your organization, and then applying the know-how

to design, implement and operate them. Reorganizing the Factory presents a thoroughly researched and comprehensive life cycle approach to competing through cellular work organizations. It takes you from the basic cell concept and its benefits through the process of justifying, designing, implementing, operating, and improving this new type of work organization in offices and on the factory floor. The book discusses many important technical dimensions, such as factory analysis, cell design, planning and control systems, and principles for lead time and inventory reduction. However, unique to the literature, it also covers in depth the numerous managerial issues that accompany organizing work into cells. In most implementations, performance measurement, compensation, education and training, employee involvement, and change management are critically important. These issues are often overlooked in the planning process, yet they can occupy more of the implementation time than do the technical aspects of cells. Includes: Why do cells improve lead time, quality, and cost? Planning for cell implementation Justifying the move to cells, strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing, implementing, and operating cells Improving and adapting existing cells Structured frameworks and checklists to help analysis and decision-making Numerous examples of cells in various industries

Cell Separation Thomas G. Pretlow, Theresa P. Pretlow, 1982

Cell Therapy Adrian P. Gee, 2022 This new edition presents a fully-updated and expanded look at current Good Manufacturing Practice (cGMP) for cell therapy products. It provides a complete discussion of facility design and operation including details specific to cord blood banking, cell processing, vector production and qualification of a new facility. Several chapters cover facility infrastructure including cleaning and maintenance, vendor qualification, writing a Standard Operating Procedure, staff training, and process validation. The detailed and invaluable product information covers topics like labelling, release and administration, transportation and shipment, et al. Further chapters cover relevant topics like writing and maintaining investigational new drug applications, support opportunities in North America and the European Union, commercial cell processing and quality testing services, and financial considerations for academic GMP facilities. A chapter on future directions rounds out Cell Therapy: cGMP Facilities and Manufacturing making it essential reading for any cell therapy professional involved in the development, use, or management of this type of facility. .

The Cell Manufacturing Playbook Chris A. Ortiz, 2019-10-02 This book describes how to effectively implement cell manufacturing. It covers the eight Wastes of Lean and the six Lean metrics that are recommended in each implementation and a description of what cell manufacturing is and its application to improving operational processes.

Cellular Manufacturing Systems Gürsel A. Süer, Mitsuo Gen, 2017 The chapters included in this book represent the work from the US, Canada, Japan, China, India, Iran, Netherlands, Turkey, Slovakia, and Portugal. The book attempts to cover the cellular manufacturing area from various angles. In terms of solution techniques, different approaches such as heuristics, mathematical models, networks models, genetic algorithm approaches, artificial neural networks, knowledge-based algorithms, a space search algorithm, simulated annealing, fuzzy concepts, analytic hierarchy processes and simulation are included in the book. As for performance measures, most chapters target a single objective whereas some others cover multiple objectives. In terms of the complexity of the problems, the authors divide them into simpler single phase problems versus more complex problems that require multiple-phase solutions. Most of the chapters discuss deterministic problems. On the other hand, a few of the chapters focus on stochastic cases. There are many new concepts and solution approaches covered in this book. The details of the material coverage is listed in the following

paragraphs. The book starts with the evolution of cellular manufacturing. In terms of design-related issues, it covers the application of math modeling for cell formation, family and subfamily formation, production system selection, formation and evaluation of design alternatives, machine layout, dynamic cells, virtual cells, cell formation considering alternative routes, remainder cells, cell formation with product of life cycle considerations, demand-variability based cell formation, layered cellular design, assembly cells and a recent Japanese proposition called SERU cells. All types of cells, namely labor-intensive cells, machine-intensive cells and robotic cells are covered in the book. In terms of operational and control issues, human skills, manpower allocation, cell size determination, dispatching rules, parallel machine scheduling, flowshop scheduling, re-entrant flowshop scheduling, flexible job shop scheduling, assembly line balancing, process planning and scheduling, multiple-resource scheduling, cell loading and cell scheduling, synchronized flow, planning concepts such as period batch control, polka, Kanban, conwip and more are discussed. Cases studies include electromechanical assembly, bicycle manufacturing, igniter assembly system, jewelry manufacturing and semi-conductor industry. We believe that this book will be of value to students, researchers, academicians and practitioners.
