Onboard Diagnostics and Measurement in the Automotive Industry, Shipbuilding, and Aircraft Construction Michael Palocz-Andresen,2012-07-03 Onboard Diagnostics and Measurement in the Automotive, Shipbuilding and Aircraft Industries is a unique title which focuses on the direct (OBM) and indirect (OBD) determination of emissions in transportation. It offers the reader a state-of-the- art report on the recent developments concerning the determination of emissions and the estimation of pollutants concentrated in the exhaust pipe, using technologies such as intelligent micro controllers, micro sensors and micro actuators systems on board. Written by Dr. Palocz-Andresen, guest professor of Sustainable Transportation at Leuphana University in Lüneburg, this book is especially useful in understanding how the European Union and the United States address the problem of transport-generated emissions. This book goes beyond the more common emissions issues encountered in the automotive arena (including light duty and heavy commercial vehicles), to expand upon the upcoming and similar concerns derived from air and sea transport. Onboard Diagnostics and Measurements in the Automotive, Shipbuilding and Aircraft Industries is a must-have source of technical information to those studying or working in the areas of transportation technology, sustainability, legislation, environment and climate protection.

Onboard Computers, Onboard Software and Satellite Operations Jens Eickhoff,2011-11-16 This book is intended as a system engineer's compendium, explaining the dependencies and technical interactions between the onboard computer hardware, the onboard software and the spacecraft operations from ground. After a brief introduction on the subsequent development in all three fields over the spacecraft engineering phases each of the main topics is treated in depth in a separate part. The features of today's onboard computers are explained at hand of their historic evolution over the decades from the early days of spaceflight up to today. Latest system-on-chip processor architectures are treated as well as all onboard computer major components. After the onboard computer hardware the corresponding software is treated in a separate part. Both the software static architecture as well as the dynamic architecture are covered, and development technologies as well as software verification approaches are included. Following these two parts on the onboard architecture, the last part covers the concepts of spacecraft operations from ground.

This includes the nominal operations concepts, the redundancy concept and the topic of failure detection, isolation and recovery. The baseline examples in the book are taken from the domain of satellites and deep space probes. The principles and many cited standards on spacecraft commanding, hardware and software however also apply to other space applications like launchers. The book is equally applicable for students as well for system engineers in space industry.

On-board Intellectual Aircraft Crew Support Systems Mikhail Krasilshchikov,2020-01-28 The human factor remains one of the most important problems affecting flight safety. On the other hand, however, the complexity of onboard control and navigational systems grows constantly. As such, a great deal of research has gone into creating onboard systems which would interact with pilots and assist them in order to avoid flight accidents. This book provides unique insights into the building of such a system, using the so-called confidential approach for the analysis and synthesis of the dynamical systems, operating under the influence of various uncontrollable factors. As a result, the book details an intellectual expert system able to support the crew during standard flight modes. This system is able to detect a hazard in real-time mode, identify its source, and provide recommendations for the pilots. The book also investigates the confidence model, offering formulas and examples of expert systems' functioning.

Does the Crew Sleep Onboard? From Cruise Ships to International Game Shows (hardback) Bruce J. Starin, 2021-08-16 Get ready to sail on a Cruise Ship Confidential! Ever wonder what goes on below decks of a real-life Love Boat? Bruce J. Starin knows. He was hired as a Social Director, and soon promoted to Assistant Cruise Director (First Officer of Entertainment) on a ship he calls the S.S. Luna Sea because, if he used its real name in this funny, wise, revelatory memoir, a lot of marriages might dissolve and a fair

number of former crewmen might get keel-hauled. Although Starin is now a highly respected international television game show consultant (that's the second half of the book), he started off keeping vacationing cruise ship passengers entertained (that's the first half) and out of trouble. This involved planning onboard shows, running shore tours, and putting up with such questions as When is the midnight buffet? Do these stairs go down? and the one that gives this book its title, Does the crew sleep on board? When Starin docked his career and began working in Hollywood he encountered just as many eccentrics, only this time they were famous, ranging from game show icons Bob Eubanks, Monty Hall, and Dick Clark to screen legends Clint Eastwood, Charlton Heston, and Esther Williams, as well as Muhammad Ali, President Gerald Ford and many more. Each was a memorable encounter. Whether you're sailing on a luxury liner or cruising behind the scenes of TV game shows you'll never have as much fun as you will with Does the Crew Sleep on Board?

On-Board Design Models and Algorithm for Communication Based Train Control and Tracking System
Tanuja Patgar,Kavitha Devi CS,2022-05-31 Railway systems have a long history of train protection and control, as to reduce the risk of train accidents. Many train control systems include automated

communication between train and trackside equipment. But several different national systems are still facing cross-border rail traffic. Today, trains for cross-border traffic need to be equipped with train control systems that are installed on the tracks. This book covers the latest advances in Communication Based Train Control (CBTC) research in on-board components locomotive messaging systems, GPS sensors, communications wayside and switching networks. It also focuses on architecture and methodology using data fusion techniques. New wireless sensor integrated modeling techniques for tracking trains in satellite visible and low satellite visible environments are discussed. With a Tunnel Surveillance Integration model, the use of optimal control is necessary to improve train control performance, considering both train–ground communication and train control. The book begins with the background and evolution of train signaling and train control systems. It introduces the main features and architecture of CBTC systems and describes current challenging methods and successful implementations. This introductory book is very useful for Signal & Telecommunication engineers to get them acquainted with the technology used in CBTC, and help them in implementing the system suitable for Indian Railways. As this is a new technology, the information provided in this book is generic and will be subsequently revised after gaining further experience.
