**The Politics of Mapping** Bernard Debarbieux, Irene  
Hirt, 2022-05-20 Maps and mapping are fundamentally  
political. Whether they are authoritarian, hegemonic,  
participatory or critical, they are most often guided by the  
desire to have control over space, and always involve  
power relations. This book takes stock of the knowledge  
acquired and the debates conducted in the field of critical  
cartography over some thirty years. The Politics of  
Mapping includes analyses of recent semiological, social  
and technological innovations in the production and use of  
maps and, more generally, geographical information. The  
chapters are the work of specialists in the field, in the form  
of a thematic analysis, a theoretical essay, or a reflection  
on a professional, scientific or militant practice. From  
mapping issues for modern states to the digital and big  
data era, from maps produced by Indigenous peoples or  
migrant-advocacy organizations in Europe, the

perspectives are both historical and contemporary.

**Organic Electroluminescence** Zakya H.

Kafafi, 2018-10-03 Organic light-emitting diode(OLED) technology has achieved significant penetration in the commercial market for small, low-voltage and inexpensive displays. Present and future novel technologies based on OLEDs involve rigid and flexible flat panel displays, solid-state lighting, and lasers. Display applications may range from hand-held devices to large flat panel screens that can be rolled up or hung flat on a wall or a ceiling. Organic Electroluminescence gives an overview of the on-going research in the field of organic light-emitting materials and devices, covering the principles of electroluminescence in organic thin films, as well as recent trends, current applications, and future potential uses. The book begins by giving a background of organic electroluminescence in terms of history and basic principles. It offers details on the mechanism(s) of electroluminescence in thin organic films. It presents in-depth discussions of the parameters

that control the external electroluminescence quantum efficiency including the photoluminescence quantum yield, the light-output coupling factor, carrier/charge injection and transport, and electron and hole recombination processes in organic semiconductors. The authors address the design and the characterization of amorphous charge transport materials with high glass transition temperatures, light-emitting small molecules and conjugated polymers. The book covers state-of-the-art concepts and technologies such as fluorescent and phosphorescent OLEDs, various approaches for patterning organics, and active matrix organic emissive displays including their back panel thin film transistors and pixel electronics. It concludes by summarizing future directions for OLEDs in organic light-emitting displays, large area distributed solid state light sources, and lasers using organic thin films, nanostructures, and photonic crystals. Organic Electroluminescence is an excellent resource and reference for stu

DeVries, Imperial Cadre, has been many things in her life. An Imperial Marine, dedicated to the protection and preservation of the Terran Empire she loves. An Imperial Cadre drop commando, personal liegewoman of Emperor Seamus II, whom she honors and reveres. Hero of the Terran Empire, one of only three living holders of the Banner of Terra. And now, outcast, rogue, pirate ... and madwoman. From the time she graduated from high school, Alicia DeVries knew what she wanted to do with her life, and she did it well. On planets like Gyangtse, Chengchou, Fuller, and Louvain - in cities like Zhikotse and Shallingsport - she's put her life on the line in defense of her Empire and Emperor again and again. She's given her blood, and the lives of men and women closer to her than brothers and sisters. But her dead have been betrayed in the name of political expediency. The justice they deserved has been denied, and a brokenhearted Alicia DeVries has resigned her commission and retired to the colony world of Mathison with her family to begin a new life. Yet Alicia is still a warrior, and the pirates who attacked Mathison, tortured and murdered her family, and left her for dead, are about to discover just how big a mistake they made. Imperial Intelligence can't find them. The Imperial Fleet can't catch them. Local defenses can't stop them. But Alicia has stolen an imperial A1 starship from the bleeding edge of technology and set out to teach them what vengeance truly is. Her fellow veterans think she's gone mad, the Fleet has shoot-on-sight orders, and the pirates have allies at the highest levels of the Imperial government. But Alicia DeVries has two allies of her own. Allies no one knows about. **Virtual Reality Start** Tom Germann,2017-05-03 The future is not a shiny beacon of hope and good times. The predictions of a glorious golden age with the development of star drives and a massive exodus of humanity to the stars and a frontier atmosphere were all false. Humanity was rocked by a brutal alien invasion that left a billion dead and many traumatized. The shock was made worse by the understanding that true intergalactic war as pictured in any sort of entertainment was not supposed to be possible. But it had happened. Now two generations later humanity is starting to reach for the stars again and is developing all those life changing technologies. Ron and his friends loved gaming. The VR world was something they knew well and when the first International Virtual Reality Competition was announced they desperately wanted to enter. Through a fluke and some good luck, they are not only enrolled but they have their VR room reserved at the local gaming centre. Now they just need to get ready for the best gaming of their lives! At least that was what they thought. They didn't know that a high-level AI that had been programmed to find a solution on how to defend

our solar system from another alien invasion was on the loose. All Ron and his friends want to do is enter the competition and do well. They don't realize that the entire system is about to be hijacked and a rogue AI has its own agenda. What can go wrong in a thirty and sixty-minute gaming session in a VR world?

*Understanding and Supporting Product-Service System Designing* Abhijna Neramballi,2020-04-06 This licentiate thesis aims to establish the basis for scientifically understanding and supporting the cognitive processes involved in the conceptual design of resource- efficient and effective product-service systems (PSSs). The research carried out is transdisciplinary in nature and includes both prescriptive and descriptive studies. First, the cognitive nature of conceptual PSS designing is investigated. Multiple pre-experimental protocol studies in a laboratory setting are carried out to do so. The cohort of these explorative studies includes experienced industrial practitioners conceptually designing a resource-efficient

PSS. These descriptive studies provide quantitative insights into the cognitive effort expended by designers on various design issues and processes during conceptual PSS designing and its potential differences to conceptual product designing. These insights form the basis for future research that can eventually shine light on this complex process with statistically significant empirical results. Second, the essence of extant prescriptive PSS design principles, methods and tools is distilled through a literature analysis and synthesis of the state of the art. Subsequently, important aspects that need to be considered during conceptual PSS designing are consolidated in the form of a PSS design schema. Third, a design navigator named lifecycle-oriented function deployment (LFD) is developed. LFD is essentially a contextual decision-making support tool, developed to guide the conceptual designing of environmentally benign PSSs. This tool informs the designers regarding the potential environmental impacts of specific design parameters of an existing offering. It subsequently guides the designers in the redesign of this existing offering into a PSS with relatively benign environmental impacts. Fourth, the effects of the two proposed prescriptions are tested empirically. True experimental protocol studies are carried out in a laboratory setting to test the effects of the prescriptive PSS design schema on the cognition of PSS designers. LFD is applied in an industrial case study using the action design research method, to support the conceptual redesign of an existing product-centric offering into an environmentally benign PSS. Environmental impacts of the PSS concepts generated using LFD are then evaluated in comparison to that of the existing offering, using simulated lifecycle assessment. A semi-structured interview is carried out to evaluate the utility and usability

of LFD, with the company personnel involved in the conceptual redesign process. This licentiate thesis is an effort to effectively design the future research work of the author. This future work will aim to support and establish generalizable scientific knowledge regarding the conceptual designing of resource-efficient and effective PSSs.

### Trade Against the Trend! Heikin Ashi

Trader, 2019-03-08 The brokerage industry usually recommends that new traders trade with the trend. But is trading this way profitable? It is said that if you go with the trend, the likelihood that you will win is higher.

Unfortunately, experience shows that most traders cannot build a profitable business this way. Old and experienced traders used to say: You have to buy when blood flows in the streets. That means that you should act against the trend. Actually, this saying is the expression of common sense itself. The question remains: Why do traders find it so hard to put this wisdom into practice? The new book by Heikin Ashi Trader gives ideas and tips on how to recognize such countertrend signals in the stock market, since these are usually the best trading opportunities.

**Creo 7.0 Mechanism Design** Roger Toogood, Creo 7.0 Mechanism Design Tutorial neatly encapsulates what you need to know about the essential tools and features of Mechanism Design with Creo: how to set up models, define analyses, and display and review results. If you have a working knowledge of Creo Parametric in Assembly mode, this short but substantial tutorial is for you. You will learn to create kinematic models of 2D and 3D mechanisms by using special assembly connections, define motion drivers, set up and run simulations, and display and critically review results in a variety of formats. This includes creating graphs of important results as well as space claim and interference analyses. Common issues that arise during mechanism design are briefly addressed and extra references listed so you can work through them when encountered. In Detail If you ever need to model a device where parts and subassemblies can move relative to each other, you will want to use the world-renowned mechanism functions in Creo. Creo's Mechanism Design functions allow you to examine the kinematic properties of your device: range of motion and motion envelopes, potential interference between moving bodies, and kinematic relationships (position, velocity, acceleration) between bodies for prescribed motions. With these functions, you will better predict the actual performance of the device and create design improvements without the expense of costly prototypes, saving you time, money and worry. If you ever need to model a device where parts and subassemblies can move relative to each other, you will want to use the world-renowned mechanism functions in Creo. With these functions, you will better predict the actual performance of the device and create design improvements without the expense of costly prototypes, saving you time, money and worry. With this tutorial, you will assemble and analyze a simple slider-crank mechanism. Each chapter has a clear focus that follows the workflow sequence, and parts are provided for the exercise that include creating connections, servos, and analyses. This is followed by graph plotting, collision detection, and motion envelope creation. You can choose to quickly cover all the essential operations of mechanism design in about two hours by following the steps covered at the beginning of chapters 2-5, or you can complete the full chapters or come back to them as needed. Plenty of figures, screenshots and animations help facilitate understanding of parts and concepts. Once you have completed chapters 2-5 and the slider-crank mechanism, chapter 6 familiarizes you with special connections in Mechanism Design: gears (spur gears, worm gears, rack and pinion), cams, and belt drives. The final chapter presents a number of increasingly complex models (for which parts are provided) that you can assemble and use to explore the functions and capability of Mechanism Design in more depth. These examples, including an In-line Reciprocator, Variable Pitch Propeller and Stewart Platform, explore all the major topics covered in the book.

Topics Covered • Connections: cylinder, slider, pin, bearing, planar, ball, gimbal, slot, rigid/weld, general • Servos and motor function types: ramp, cosine, parabolic, polynomial, cycloidal, table, user defined • Tools for viewing analysis results: trace curve, motion envelope, user defined measures, animations, collision/interference

detection; analysis problems • Special connections: spur gear, worm gear, rack and pinion, cams and belts
