

Orbital Defender Lite 12

Ralph Waldo Emerson

First Orbit Nathan Thompson, 2019-08-30 He's trapped in a ruined starship full of monsters. But every section he fixes will help him turn the tide. Jasper Cloud has been torn from a dystopian Earth and thrust into a mighty but ruined alien starship, where deranged and mutated creatures haunt the darkened corridors. They've consumed all but one crewmember: the being serving as the ship's core, a young woman as badly damaged as the starship itself. They both should be as doomed as Jasper was back on Earth, but for one surprise: Jasper has the power to help repair the damaged sections of the mighty vessel. And every section he repairs also augments his own body. If he is quiet and careful, he can turn himself into a weapon capable of defeating the hungry horrors still prowling the ship's halls, and reactivate the most powerful spacecraft left in the universe. But if he fails, then the creatures will have a vessel of their own to visit and devour every populated planet left-Earth included. Cradle meets Dead Space.

Defense Against the Dark Arts in Space Todd Harrison, Kaitlyn Johnson, Makena Young, 2021-10-20 This analysis from the CSIS Aerospace Security Project addresses different methods and technologies that can be used by the United States government, and others, to protect against or deter adversarial attacks via counterspace weapons.

The Physics of Space Security David Wright, Laura Grego, Lisbeth Gronlund, 2005

Security and Stability in the New Space Age Brad

Townsend,2020-07-12 This book examines the drivers behind great power security competition in space to determine whether realistic strategic alternatives exist to further militarization. Space is an area of increasing economic and military competition. This book offers an analysis of actions and events indicative of a growing security dilemma in space, which is generating an intensifying arms race between the US, China, and Russia. It explores the dynamics behind a potential future war in space and investigates methods of preventing an arms race from an international relations theory and military-strategy standpoint. The book is divided into three parts: the first section offers a broad discussion of the applicability of international relations theory to current conditions in space; the second is a direct application of theory to the space environment to determine whether competition or cooperation is the optimal strategic choice; the third section focuses on testing the hypotheses against reality, by analyzing novel alternatives to three major categories of space systems. The volume concludes with a study of the practical limitations of applying a strategy centered on commercialization as a method of defusing the orbital security dilemma. This book will be of interest to students of space power, strategic studies, and international relations.

Space Weapons Earth Wars Robert Preston,Dana J. Johnson,Sean J. A. Edwards,Michael D. Miller,Calvin Shipbaugh,2002-02-13 This overview aims to inform the public discussion of space-

based weapons by examining their characteristics, potential attributes, limitations, legality, and utility. The authors do not argue for or against space weapons, nor do they estimate the potential costs and performance of specific programs, but instead sort through the realities and myths surrounding space weapons in order to ensure that debates and discussions are based on fact.
