Carveth Read

The Origins of Man Douglas Palmer, 2007 Origins of Man gathers the many strands of investigation into our origins - including fossil remains, ancient artefacts, palaeoclimatological evidence from ice cores, genetics and linguistic traces - to offer a comprehensive overview of the current state of knowledge of our origins and the human diaspora across the globe. The text is richly supplemented with detailed, specially commissioned cartography, illustrations and photographs. The many discoveries made in recent times, for instance the discovery of Homo floresiensis (the 'hobbit' people), and the 700,000-year-old tools found near Pakefield in England, have generated considerable media coverage and general interest in human origins. Tracing family trees through genetics is also becoming increasingly high profile, and this can reveal fascinating details about our origins and how our ancestors settled the planet. This atlas communicates a subject of the utmost interest to us all in an entertaining and accessible fashion, making special use of maps to help the reader to visualize the complex story of how we became who we are, and how the planet was colonized.

What is the Origin of Man? Maurice Bucaille, 1982 Man has pondered his origins for thousands of years, but until recently, his only source of ideas consisted of notions drawn from religious teachings and various philosophical systems. Not until modern times, and the arrival of data of a different kind, has he been able to approach the problem of his origins from a new angle. From the Author of The Bible, The Qur'an and Science.

This book represents the truth of mans origins confirmed by DNA mathematical and scientific facts. Like truth this book brings conclusion to an age-old argument between Clergy and Scientist. A clear explanation of why we're all so different when it comes to race, which it effects so many communities of different races living together. A major benefit of this book is that the very beginning of man's history is unveiled in a new light, which will be the talk of many prestigious inner circles of elite social groups and higher arc political policy makers. Majoring student readers of this book will be informed first ahead of their college professors on the new direction of DNA's future of calculating the mutated percentage cells in any genome. Truth! The Origins of Man and the Universe Barry Long, 1998 This is an account of a spiritual enquiry into evolution, civilization, our place in the universe and the structure of reality itself. The Descent of Man, and Selection in Relation to Sex Charles Darwin,2008-09-02 In the current resurgence of interest in the biological basis of animal behavior and social organization, the ideas and questions pursued by Charles Darwin remain fresh and insightful. This is especially true of *The Descent of Man and Selection in Relation to Sex*, Darwin's second most important work. This edition is a facsimile reprint of the first printing of the first edition (1871), not previously available in paperback. The work is divided into two parts. Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals. Darwin shows that human mental and emotional capacities, far from making human beings unique, are evidence of an animal origin and evolutionary development. Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection. Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment, but rather to confer an advantage in sexual competition. These two themes are drawn together in two final chapters on the role of sexual selection in humans. In their Introduction, Professors Bonner and May discuss

the place of *The Descent* in its own time and relation to current work in biology and other disciplines.

The First Humans Frederick E. Grine, John G. Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless. Most deal with the origin and early evolution of our own genus - something about which we should care. Some of these issues pertain to taxonomy and systematics. How many species of *Homo* were there in the Pliocene and Pleistocene? How do we identify the earliest members the genus *Homo*? If there is more than one Plio-Pleistocene species, how do they relate to one another, and where and when did they evolve? Other issues relate to questions about body size, proportions and the functional adaptations of the locomotor skeleton. When did the human postcranial "Bauplan" evolve, and for what reasons? What behaviors (and what behavioral limitations) can be inferred from the postcranial bones that have been attributed to *Homo habilis* and *Homo erectus*? Still other issues relate to growth, development and life history strategies, and the biological and archeological evidence for diet and behavior in early *Homo*. It is often argued that dietary change played an important role in the origin and early evolution of our genus, with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of *Homo*. Still other issues relate to the environmental and climatic context in which this genus evolved.

In the Light of Evolution National Academy of Sciences, 2007 The Arthur M. Sackler Colloquia of the National Academy of Sciences address scientific topics of broad and current interest, cutting across the boundaries of traditional disciplines. Each year, four or five such colloquia are scheduled, typically two days in length and international in scope. Colloquia are

organized by a member of the Academy, often with the assistance of an organizing committee, and feature presentations by leading scientists in the field and discussions with a hundred or more researchers with an interest in the topic.

Colloquia presentations are recorded and posted on the National Academy of Sciences Sackler colloquia website and published on CD-ROM. These Colloquia are made possible by a generous gift from Mrs. Jill Sackler, in memory of her husband, Arthur M. Sackler.
