

P38 Lightning

David Doyle

P-38 Lightning at War Joe Christy, Jeffrey L. Ethell, 1978 This classic title traces the history of the Lightning from the earliest Lockheed Model 22 through the severe compressibility problems of the prototype YP-38, to the P-38L-5, the fighter-bomber-reconnaissance aircraft of the USAAF in Italy and the Pacific. Graphically illustrated with over 200 action photographs and many eyewitness accounts, this book tells the story of a unique and innovative aircraft, revered for its adaptability and ability to limp home on one engine where other aircraft would have been destroyed.

Lightning Strikes Steve Blake, 2020-10-04 **LIGHTNING STRIKES-THE LOCKHEED P-38** tells the full story of one of the most successful and versatile aircraft of the Second World War. The P-38 (including its F-4 and F-5 photo reconnaissance models) eventually served with all the USAAF's numbered overseas air forces, from early 1942 to VJ Day. The book describes the Lightning's design and its technical details as it gradually evolved and improved, from the original XP-38 to its final variant, the P-38L-5. The main focus is on its service in the combat theatres, from the frigid, windswept Aleutian Islands in the North Pacific to

the steaming jungles of the South Pacific and Southeast Asia, the burning sands of North Africa and the more temperate climates of Europe. All the units that flew the Lightning are included, as are the experiences of many of their pilots and ground crewmen as they fought the Japanese Empire and the European Axis. Also related are the P-38's service with foreign (non-U.S.) air forces, its postwar commercial utilization as civilian aircraft and the surviving examples in museums around the world. The book is extremely well illustrated by over 400 high-resolution photographs, art work and graphics, and is supplemented by detailed appendices.

P-38 Lightning in Action Gene B. Stafford, 1976

The Lockheed P-38 Lightning Warren Bodie, 2001-05-02 The definitive story of the World War II fighter which the Germans dubbed the fork-tailed devil includes line drawings, photos of prototypes and coverage of Lockheed proposals.

P-38 Lightning Aces of the 82nd Fighter Group Steve Blake, 2012-07-20 When the 82nd Fighter Group was organized in March 1942, most of its initial pilot cadre was comprised of newly graduated staff sergeant pilots of Class 42-C – enlisted men! They learned to fly the P-38 at Muroc, in California's Mojave Desert, and then moved to the Los Angeles area to continue their training and

to serve as part of its air defence. In September 1942 the group was transported to the East Coast, from where it shipped out to Ireland on the Queen Mary. By this time all its remaining sergeant pilots had been commissioned. As of VE-Day the 82nd Fighter Group's score of confirmed aerial victories stood at 548 aircraft shot down, plus a huge amount of enemy materiel – including aircraft – destroyed on the ground and the sea. It had been awarded three Distinguished Unit Citations. The cost of this success was high, however, for around 250 of the group's pilots had either been killed in action or captured.

P-38 Lightning Aces of the Pacific and CBI John

Stanaway,1997-04-15 The P-38 was used on virtually every front to which the USAAF were committed, but enjoyed its greatest successes in the Pacific and China-Burma-India (CBI) theatres. The speed, range and firepower of the P-38 made it the favourite of nearly all aircrew fighting in the Solomons, New Guinea and the Philippines, and over 1800 Japanese aircraft fell to its guns. From the first encounters at the end of 1942 until the Lightning scored the final Fifth Air force victories in August 1945, these pilots made the Pacific skies very much their own battleground.

P-38 Lightning Vol. 2 David Doyle,2019-10-28 This second of

two volumes continues the P-38 story by focusing on the later, mass-produced models of this historic fighter--P-38J through P-38M. Each type is examined through carefully researched archival photos, as well as photographs of currently preserved examples. Known to the enemy during World War II as the Fork-tailed devil, the pilots of the Lockheed P-38 Lightning were charged with the responsibility of escorting American bombers deep over heavily defended Europe during the early years of the air campaign against Nazi Germany. In the Pacific, the Lightning's long range was put to good use flying over vast expanses of ocean. Detailed text and captions illustrate not only the design and construction of the later-war Lightnings, but also their combat use in WWII. Large, clear photos, coupled with descriptive and informative captions, put the reader on the airfield and in the sky with this historic aircraft.

P-38 Lightning Aces of the ETO/MTO John

Stanaway, 1998-06-05 The P-38 made its combat debut in Europe in mid-1942, the first American fighters being flown to the UK before heading further east to Twelfth Air Force units in North Africa. Its service in this theatre, and later over the heartland of Germany itself, earned the P-38 the nickname 'der gabelschwanz Teufel' (the 'fork-tailed' devil). This volume traces the careers of

many previously unknown aces within the USAAF in Europe, and helps redress the balance which has in the past seen all the 'glory' for the fighter victories in this theatre shared between the pilots of the P-47 and P-51. Some 17 pilots scored 7 or more kills on the P-38 in the ETO/MTO.

P-38 Lightning Aces 1942-43 John Stanaway, 2014-07-20 The first P-38s became operational with the 1st Fighter Group in April 1941, and the initial combat deployments were made in Alaska, the Southwest Pacific and North Africa during the latter part of 1942. Photographic reconnaissance versions of the P-38 were in action even sooner when F-4 (P-38E) models were rushed to frontline units a few months after Pearl Harbor. Often using modified field measures to equip aircraft and train pilots in this demanding fighter, early pilots wrote a remarkable record of accomplishments that displayed a high degree of courage and innovation. Every theatre in which the United States was involved saw deployment of the P-38, and more than 60 Lightning pilots were credited with at least five victories by the end of 1943. Featuring illustrations depicting P-38 models from the E to the H-5 previously not known to the general public, unpublished photographs and new data, this volume presents a comprehensive and innovative account of some of

these lesser known aces.

Fork-Tailed Devil: The P-38 Martin Caidin,2016-10-05 One of America's greatest military aviation historians relates the astonishing--and true--story of the only American warplane to fight in every operational theater in World War II from Pearl Harbor to Alaska and North Africa to Northern Europe.

P-38 Lightning vs Ki-61 Tony Donald Nijboer,2010-03-23 The air war in the South Pacific was unique and very different from other major air operations undertaken during World War II. In no theater was air power more central to success than in the South Pacific. The objective of every major strategic move was to seize an air base. The air power employed was the most complex technology available, and, ironically, it was employed over some of the most brutal, primitive and largely unknown terrain in the world. Much has been written about the major battles such as Pearl Harbor, Midway, Iwo Jima and Okinawa, but very little focus has been paid to the vital battles that took place in New Guinea and the Solomons. When hostilities in New Guinea began, Japan possessed an advantage in air strength, but as American and

Australian strength grew, the Japanese air arm suffered complete and utter defeat from which it would never recover. Two of the aircraft that would see frequent combat in the New Guinea campaign were the Ki-61 Tony and P-38 Lightning. The Ki-61 represented the rare occasion when Germany and Japan cooperated in a technical field. Using the license built German DB 601A engine, which powered the Bf 109E, production of the Ki-61 began in August 1942, and the plane first flew a few weeks after Pearl Harbor. On the other hand, the P-38 was already in service (albeit in small numbers). Its speed, firepower and range made it a formidable opponent, and one for which the Japanese never had an answer; the P-38 was ultimately credited with destroying more Japanese aircraft than any other USAAF fighter. While the Ki-61 was well armed with two heavy machine guns and two German 20mm cannons, it was not quite a match for the P-38, but the differences were slight and in a dogfight it often came down to the skill and even luck of the pilot at the controls. This title explores the design and development, technical specifications, strategies, combatants, and statistics of each of these two aircraft, complete with extensive photographs and specially commissioned artwork.

Lockheed P-38 Lightning – Bell P-39 Airacobra – Curtiss

P-40 Mantelli - Brown - Kittel - Graf,2017-03-03 The Lockheed P-38J Lightning aircraft was revolutionary, extremely innovative, thanks to double-girder fuselage, the two Allison V-engines with turbochargers within the tail beams and landing gear in tricycle. The Bell P-39 Airacobra was a single-engine fighter produced by the US to low-wing Bell Aircraft Corporation. It was the most controversial fighter aircraft used by the US during World War II. It was the first fighter in the world to have the engine installed in the middle of the fuselage, behind the pilot. The Bell P-63 Kingcobra was a single-engine low-wing fighter aircraft developed by the US Air Force Bell Aircraft Corporation in the early forties and used during World War II. Evolution of the previous P-39 Airacobra, launched in an attempt to correct the defects of that model, the United States Army Air Forces will never estimated suitable for combat, relegating him to the towing role for targets. As a result, nearly two-thirds of the production was assigned to the Soviet Union and about 300 units to units of Free France. The Curtiss P-40 was a single-seat single-engine monoplane US manufacturing in the first half of the forties was taken by the Allies as a fighter aircraft or fighter in many of the theaters in which you fought the Second World War. Produced by the Curtiss Aeroplane and Motor

Company of Buffalo, New York, never was an aircraft with exceptional characteristics (mainly because of its engine, underpowered at high altitude); However, it was also made of a large number of specimens, and his great strength (coupled with its widespread availability since the early months of the entry into the war) made it one of the most important fighter for American aviation events in the first phase of World war II, between 1941 and the summer of 1943.

P-38 Lightning David Doyle,2017-08-08 The book traces the development and combat history of the twin-engine, twin-boom, Lockheed P-38 Lightning from the first flight of the XP-38 in January 1939 through a succession of models, ending with the electronic-laden, two-seat P-38M. Created on the drawing boards of two of America's most notable aircraft designers - Hall Hibbard and Clarence 'Kelly' Johnson - the P-38 Lightning was the only U.S. pursuit plane to remain in continuous production throughout WWII. In the Southwestern Pacific, the P-38 served as the U.S.Army Air Force's primary long-range fighter prior to the arrival of the P-51D Mustang. Top American air aces and Medal-of-Honor winners Richard Bong and Thomas McGuire both flew Lightning's, and it was a P-38 that brought down Japanese Admiral Isoroku

Yamamoto's plane in April 1943. The Lightning saw service in Europe too, and it was after flying a P-38 to assess the progress of the Normandy Invasion in 1944, that U.S. Lt. Gen. Jimmy Doolittle referred to the Lightning as the sweetest-flying plane in the sky. Illustrated with more than 150 period photographs, a third of them rare original color photos, plus color profiles and detailed line drawings.

Lockheed P-38 Lightning Jerry Scutts, 2006 Lightning! One of the best-named aircraft of WW2, the Lockheed P-38 was also one of the few fighters in production throughout hostilities. Immediately recognizable by its twin-boom tail layout, the P-38 Lightning was one of the mainstays of the USAAF's fighter inventory. Deployed in all theaters, Lightnings excelled in most, being one of the few American fighters armed with cannon. Subject to lengthy development throughout the war, the P-38 exemplified the technical peak reached by aeronautical engineers in the 1940s.

P-38 Lightning vs Bf 109 Edward M. Young, 2023-11-23 An exciting account of the aerial battles fought by the USAAF's P38 Lightnings and the Jagdflieger's Bf 109Gs for dominance over North Africa and the Mediterranean. USAAF fighter pilots experienced a baptism of fire when flying the technically advanced

but fragile P-38 Lightning over North Africa in the wake of 1942's Operation Torch. Their opponents were battle-hardened jagdflieger of the Jagdwaffe, flying the tried and tested Bf 109 in its very latest Gustav iteration. Responsible primarily for escorting USAAF bombers attacking Afrika Korps installations in Tunisia, the P-38 units in North Africa had to develop effective tactics to defend the bombers against Luftwaffe fighter attacks. For several months the Lightning squadrons had to also cope with shortages of aircraft and spare parts, steady losses and a lack of replacement pilots. To survive, American aviators had to learn quickly. While it is difficult to definitively attribute victories in air combat, in the air battles over Tunisia and later over Sicily and Italy, the claims made by Lightning pilots were comparable to Luftwaffe claims for P-38s destroyed. Edward M. Young turns his attention to the bitterly fought air war in North Africa and the Mediterranean in 1942–43. Using original archival sources, official records and first-hand accounts from both USAAF and Luftwaffe veterans, as well as newly commissioned artwork and 50 carefully selected photographs from official and personal archives, this book sees two of the most iconic piston-engined fighters of their era pitted head-to-head for control of the skies in a key theatre of World War II.

Lockheed P-38 Lightning Frederick A. Johnsen, 1996 One of a series of books designed for the layman which looks at military aircraft that have recently arrived in the marketplace. Special emphasis is placed on the design and performance aspects of the aircraft and detailed technical specifications are included.
