Smith,2014-04-03 The first edition of Personality Assessment provided an overview of the most popular self-report and performance-based personality assessment instruments. The chapter authors were key members in creating or developing the research base for the eight test instruments covered in the book. The text was geared with graduate-level clinical, school, and counseling psychology courses in mind. While still retaining all the attractive features of the first edition, this revision will reflect the advances in the field since 2008. Chapter contributors updated and expanded on reliability and validity data, clinical utility, multicultural considerations, and implications for therapeutic assessment. Psychological Testing in the Service of Disability Determination Institute of Medicine,Board on the Health of Select Populations,Committee on Psychological Testing, Including Validity Testing, for Social Security Administration Disability Determinations,2015-06-29 The United States Social Security Administration (SSA) administers

two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

Structured Clinical Interview for the DSM-5® Alternative Model for Personality Disorders (SCID-5-AMPD) Module I Donna S. Bender, Andrew E. Skodol, John M. Oldham, Michael B. First, 2017-08-12 The Structured Clinical Interview for the DSM-5 Alternative Model for Personality Disorders (SCID-5-AMPD) meets a timely need. The Alternative Model for Personality Disorders in DSM-5 has ushered in a consensus and an upswing in research that has shifted from a categorical diagnosis of personality disorders toward a dimensional approach. Before now, no interview-based procedure has been available for applying the Alternative Model. Expertly designed, the Structured Clinical Interview for the DSM-5 Alternative Model for Personality Disorders (SCID-5-AMPD) is a semistructured diagnostic interview that guides clear assessment of the defining components of personality pathology as presented in the DSM-5 Alternative Model. The modular format of the SCID-5-AMPD allows the researcher or clinician to focus on those aspects of the Alternative Model of most interest. Module I: Structured Clinical Interview for the Level of Personality Functioning Scale is devoted to the linchpin of dimensional assessment -- self and interpersonal functioning -- using the Level of Personality Functioning Scale. Module I provides both a global functioning score and an innovative, detailed assessment of all four domains of functioning (Identity, Self-Direction, Empathy, and Intimacy) and their corresponding subdomains. Module I can be used independently or in combination with any of the following SCID-5-AMPD modules: * Module II dimensionally assesses the five pathological personality trait domains and their corresponding 25 trait facets. * Module III comprehensively assesses each of the six specific personality disorders of the Alternative Model, as well as Personality Disorder--Trait-Specified. Also available is the User's Guide for the SCID-5-AMPD: the essential tool for the effective use of any SCID-5-AMPD module. This companion guide provides instructions for each SCID-5-AMPD module and features completed samples of all modules in full, with corresponding sample patient cases and commentary. Trained clinicians with a basic knowledge of the concepts of personality and personality psychopathology will benefit from the myriad applications and insights offered by the SCID-5-AMPD.
