The Au Pair Emma Rous, 2020-07-07 If V. C. Andrews and Kate Morton had a literary love child, Emma Rous' USA Today bestseller *The Au Pair* would be it. One of the most anticipated books of 2019 from Pop Sugar, Bustle, Cosmo, Parade, and Goodreads! Seraphine Mayes and her twin brother, Danny, were born in the middle of summer at their family's estate on the Norfolk coast. Within hours of their birth, their mother threw herself from the cliffs, the au pair fled, and the village thrilled with whispers of dark cloaks, changelings, and the aloof couple who drew a young nanny into their inner circle. Now an adult, Seraphine mourns the recent death of her father. While going through his belongings, she uncovers a family photograph that raises dangerous questions. It was taken on the day the twins were born, and in the photo, their mother, surrounded by her husband and her young son, is smiling serenely and holding just one baby. Who is the child, and what really happened that day?

So You Wanna Be an Au Pair in the USA Cynthia Jele, 2006 Each year thousands of young men and women from all over the world visit the United States of America as au pairs. They do so expecting a fun-filled adventure, with opportunities to travel, improve their English, and make new friends. Many are surprised to find the promised adventure is not always pleasant. This book offers prospective au pairs a comprehensive idea of what au pairing in America truly entails, that is, the good, the bad, and the ugly. True au pair experiences are used throughout the book to illustrate possible dilemmas one may face and how best to deal with them.

Pair Programming Illuminated Laurie Williams, Robert R. Kessler, 2003 Written as instruction for pair programming newbies, with practical improvement tips for those experienced with the concept, this guide explores the operational aspects and unique fundamentals of pair programming; information such as furniture set-up, pair rotation, and weeding out bad pairs.

Pair-a-Dimes Tom Tynan, 2016-05-05 Tom Taylor's overly ambitious ways took him from his dream house in southern California on a path to the Big House, a Federal Penitentiary. Just when he thought things couldn't get any worse; he returned from court to find Iouri Malakov's Russian Mafia kingpin had moved into his cell while he was gone? and then a horrific game of cat and mouse really began!

What's a Pair? What's a Dozen? Stephen R. Swinburne, 2000-02-01 The world is filled with numbers. From learning to count their fingers to learning to put on their shoes, children encounter mathematical concepts early in life. Steve Swinburne introduces children to number-related words in this bouncy, colorful photo-essay. From one to a dozen, lively photographs illustrated math words such as single, double, couple, and prefixes such as uni-, bi-, and tri-. The second half of the book is presented as a guessing game. Following *Lots and Lots of Zebra Stripes* and *Guess Whose Shadow?*, Steve Swinburne offers children another entertaining look at an all-important concept.

Pair Correlations in Many-Fermion Systems Vladimir Z. Kresin, 2013-06-29 At first glance, the articles in this book may appear to have nothing in common. They cover such seemingly disparate subjects as the properties of small metallic clusters and the behavior of superfluid He³, nuclear physics and organic materials, copper oxides and magnetic resonance. Why have they been brought together, particularly in our time of narrow specialization? In fact, the properties and effects described in this book touch upon one and the same fundamental phenomenon: pair correlation. Introduced in the theory of superconductivity by J. Bardeen, L. Cooper, and J. Schrieffer (BCS), this effect plays a key role in various Fermi systems. The book consists of several sections. The first chapter is concerned with conventional and high T_c superconductors. The second chapter describes two relatively young families of superconductors: organics and fullerenes. Chapter III addresses the superfluidity of ³He • The discovery of this phenomenon in 1971 was a big event in physics and last year was acknowledged by a Nobel prize. This book contains the text of the Nobel lecture. Chapters IV and V are devoted to correlations in finite Fermi systems such as small metallic clusters, C₆₀ anions, and atomic nuclei. The book thus covers a broad range of problems,

illuminating the close ties between various areas of physics.

One Is Not a Pair Britta Teckentrup, 2017-03-14 Can you find the one thing that doesn't match? Britta Teckentrup, creator of the best-selling *The Odd One Out* and *Where's the Pair?*, returns with another gorgeously illustrated spotting book. In *One Is Not a Pair*, each patterned page contains a set of pairs . . . but one thing does not match any of the others. Can you find it?

A New Pair of Glasses Chuck C., 1984

Where's the Pair? Britta Teckentrup, 2017-07-20 Can you spot the Siamese cats? Where are the fish with matching fins? This fabulous follow up to stand-out title *The Odd One Out* features rhyming riddles accompanied by a complex patterned artwork, within which the answer lies. Never has a search-and-find game been so pleasing to the eye than with this stylish title from the masterful Britta Teckentrup, presented in an upmarket, contemporary format.

Excitons and Cooper Pairs Monique Combescot, Shihue-Yuan Shiao, 2016 This work connects the two famous fields of condensed matter physics, semiconductors and superconductors, through the composite boson nature of their key particles, excitons and Cooper pairs. The goal is to understand through these key particles how composite bosons made of two fermions interact.

Remote Pairing Joe Kutner, 2013-12-02 You've heard about pair programming's benefits: fewer bugs, improved skills, and faster delivery. But what happens when you want to pair with someone in another city, country, or even hemisphere? With the right tools, you won't have to relocate to refactor. In this book, you'll learn techniques used by the most productive remote programmers in the industry to pair with anyone on the globe on any kind of project. You'll use collaborative editors, screen sharing, secure networking, and virtualization to create a remote pairing environment that feels as if your partner is sitting right next to you.

Spin Dynamics in Radical Pairs Alan Lewis, 2018-09-12 This book sheds new light on the dynamical behaviour of electron spins in molecules containing two unpaired electrons (i.e. a radical pair). The quantum dynamics of these spins are made complicated by the interaction between the electrons and the many nuclear spins of the molecule; they are intractable using analytical techniques, and a naïve numerical diagonalization is not remotely possible using current computational resources. Hence, this book presents a new method for obtaining the exact quantum-mechanical dynamics of radical pairs with a modest number of nuclear spins. Readers will learn how a calculation that would take 13 years using conventional wavepacket propagation can now be done in 1 day, and will also discover a new semiclassical method for approximating the dynamics in the presence of many nuclear spins. The new methods covered in this book are shown to provide significant insights into three topical and diverse areas: charge recombination in molecular wires (which can be used in artificially mimicking photosynthesis), magnetoelectroluminescence in organic light-emitting diodes, and avian magnetoreception (how birds sense the Earth's magnetic field in order to navigate).

Trading Pairs Mark Whistler, 2004-10-07 An accessible guide to the pairs trading technique A leading arbitrage expert gives traders real tools for using pairs trading, including customizable Excel worksheets available on the companion website. Mark Whistler (Denver, CO) is the key developer of pairstrader.com as well as a licensed securities trader and broker and leading arbitrage expert.

A Comparison Process for Mouse Pairs John R. Steel, 2022-11-24 This book proves some important new theorems in the theory of canonical inner models for large cardinal hypotheses, a topic of central importance in modern set theory. In particular, the author 'completes' the theory of Fine Structure and Iteration Trees (FSIT) by proving a comparison theorem for mouse pairs parallel to the FSIT comparison theorem for pure extender mice, and then using the underlying comparison process to develop a fine structure theory for strategy mice. Great effort has been taken to make the book accessible to non-experts so that it may also serve as an introduction to the higher reaches of inner model theory. It contains a good deal of background material, some of it unpublished folklore,

and includes many references to the literature to guide further reading. An introductory essay serves to place the new results in their broader context. This is a landmark work in inner model theory that should be in every set theorist's library.

A Pair of Them Evelyn Hunt Raymond, 1901

Cause Effect Pairs in Machine Learning Isabelle Guyon, Alexander Statnikov, Berna Bakir Batu, 2019-10-22 This book presents ground-breaking advances in the domain of causal structure learning. The problem of distinguishing cause from effect ("Does altitude cause a change in atmospheric pressure, or vice versa?") is here cast as a binary classification problem, to be tackled by machine learning algorithms. Based on the results of the ChaLearn Cause-Effect Pairs Challenge, this book reveals that the joint distribution of two variables can be scrutinized by machine learning algorithms to reveal the possible existence of a "causal mechanism", in the sense that the values of one variable may have been generated from the values of the other. This book provides both tutorial material on the state-of-the-art on cause-effect pairs and exposes the reader to more advanced material, with a collection of selected papers. Supplemental material includes videos, slides, and code which can be found on the workshop website. Discovering causal relationships from observational data will become increasingly important in data science with the increasing amount of available data, as a means of detecting potential triggers in epidemiology, social sciences, economy, biology, medicine, and other sciences.

The Bridal Pair Robert W. Chambers, 2004-06 He hesitated and stopped, then resumed his course, mumbling to himself: I can pass the cemetery later; she would not be there; I don't think I shall ever see her again. . . . I--I wonder whether I am--perfectly--well--.

Pairing in Fermionic Systems Mark Gower Alford, John Walter Clark, Armen Sedrakian, 2006 Cooper pairing of fermions is a profound phenomenon that has become very important in many different areas of physics in the recent past. This book brings together, for the first time, experts from various fields involving Cooper pairing, at the level of BCS theory and beyond, including the study of novel states of matter such as ultracold atomic gases, nuclear systems at the extreme, and quark matter with application to neutron stars. Cross-disciplinary in nature, the book will be of interest to physicists in many different specialties, including condensed matter, nuclear, high-energy, and astrophysics. The emphasis is on novel issues beyond ordinary BCS theory such as pairing in asymmetric systems, the polarization effect, and higher spin pairing. These topics are rarely treated at the textbook level and all of them are the subjects of intensive ongoing research. The book also considers various new techniques widely used in current research that differ significantly from the conventional condensed matter approaches described in the standard literature. Sample Chapter(s). Chapter 1: Color Superconductivity in Dense, but not Asymptotically Dense, Quark Matter (1,976 KB). Contents: Color Superconductivity in Dense, But Not Asymptotically Dense, Quark Matter (M Alford & K Rajagopal); Larkin-Ovchinnikov-Fulde-Ferrell Phases in QCD (G Nardulli); Phase Diagram of Neutral Quark Matter at Moderate Densities (S B Rster et al.); Spontaneous Nambu-Goldstone Current Generation Driven by Mismatch (M Huang); The CFL Phase and m s: An Effective Field Theory Approach (T Schnfer); Nuclear Superconductivity in Compact Stars: BCS Theory and Beyond (A Sedrakian & J W Clark); Pairing Properties of Dressed Nucleons in Infinite Matter (W H Dickhoff & H Mther); Pairing in Higher Angular Momentum States: Spectrum of Solutions of the 3 P 2 - 3 F 2 Pairing Model (M V Zverev et al.); Four-Particle Condensates in Nuclear Systems (G RAPke & P Schuck); Realization, Characterization, and Detection of Novel Superfluid Phases with Pairing Between Unbalanced Fermion Species (K Yang); Phase Transition in Unbalanced Fermion Superfluids (H Caldas).
