The Ecology of Games Katie Salen Tekinbas, 2007-11-30 An exploration of games as systems in which young people participate as gamers, producers, and learners. In the many studies of games and young people's use of them, little has been written about an overall “ecology” of gaming, game design and play—mapping the ways that all the various elements, from coding to social practices to aesthetics, coexist in the game world. This volume looks at games as systems in which young users participate, as gamers, producers, and learners. The Ecology of Games (edited by Rules of Play author Katie Salen) aims to expand upon and add nuance to the debate over the value of games—which so far has been vociferous but overly polemical and surprisingly shallow. Game play is credited with fostering new forms of social organization and new ways of thinking and interacting; the

contributors work to situate this within a dynamic media ecology that has the participatory nature of gaming at its core. They look at the ways in which youth are empowered through their participation in the creation, uptake, and revision of games; emergent gaming literacies, including modding, world-building, and learning how to navigate a complex system; and how games act as points of departure for other forms of knowledge, literacy, and social organization. Contributors Ian Bogost, Anna Everett, James Paul Gee, Mizuko Ito, Barry Joseph, Laurie McCarthy, Jane McGonigal, Cory Ondrejka, Amit Pitaru, Tom Satwicz, Kurt Squire, Reed Stevens, S. Craig Watkins

Engineering Play Mizuko Ito, 2012-02-10 How the influential industry that produced such popular games as Oregon Trail and KidPix emerged from experimental efforts to use computers as tools in child-centered learning. Today, computers are part of kids' everyday lives, used both for play and for learning. We envy children's natural affinity for computers, the ease with which they click in and out of digital worlds. Thirty years ago, however, the computer belonged almost exclusively to business, the military, and academia. In *Engineering Play*, Mizuko Ito describes the transformation of the computer from a tool associated with adults and work to one linked to children, learning, and play. Ito gives an account of a pivotal period in the 1980s and 1990s, which saw the rise of a new category of consumer software designed specifically for elementary school-aged children. "Edutainment" software sought to blend various educational philosophies with interactive gaming and entertainment, and included such titles as *Number Munchers*,

Oregon Trail, KidPix, and Where in the World Is Carmen Sandiego?. The children's software boom (and the bust that followed), says Ito, can be seen as a microcosm of the negotiations surrounding new technology, children, and education. The story she tells is both a testimonial to the transformative power of innovation and a cautionary tale about its limitations.

Extreme Music Michael Tau, 2022-08-30 Expand your aural and sensory experiences with *Extreme Music*. An exploration of tomorrow's sounds (and silences) today. Michael Tau had spent years obsessed by the extremes of musical expression. *Extreme Music: Silence to Noise and Everything In Between* is the culmination of decades of research into the sounds (and silences) that comprise the outer limits and conceptual expressions that stretch the definition of music. Tau defines and categorizes these recorded sounds into sections that allow fans and newcomers to explore the fascinating world of musicians who defy convention. He explores a wide range of extremes including volume, speed, and vulgarity to packaging, recording methods, unplayable media, outdated technologies, and digital pioneers. He asks and answers the questions: Are all sounds music? Is silence music? Is a plate of rotting food once cataloged, packaged and sold by a distributor qualify as music? *Extreme Music* includes over 100 interviews with makers and musicians as Tau uses his background in psychiatry to help readers understand what motivates people to create and listen to non-mainstream music. As a fan of multiple avant-garde musical genres, Tau uncovers the pleasures (and sometimes pain and frustration) found at the outré fringes of music. *Extreme Music* is the ideal guide for curious seekers, die-hard fans, and cultural investigators. Features images and curated links to samples of music.

Machine Learning Techniques for Text Nikos Tsourakis, 2022-10-31 Take your Python text processing skills to another level by learning about the latest natural language processing and machine learning techniques with this full color guide Key Features Learn how to acquire and process textual data and visualize the key findings Obtain deeper insight into the most commonly used algorithms and techniques and understand their tradeoffs Implement models for solving real-world problems and evaluate their performance Book Description With the ever-increasing demand for machine learning and programming professionals, it's prime time to invest in the field. This book will help you in this endeavor, focusing specifically on text data and human language by steering a middle path among the various textbooks that present complicated theoretical concepts or focus disproportionately on Python code. A good metaphor this work builds upon is the relationship between an experienced craftsman and their trainee. Based on the current problem, the former picks a tool from the toolbox, explains its utility, and puts it into action. This approach will help you to identify at least one practical use for each method or technique presented. The content unfolds in ten chapters, each discussing one specific case study. For this reason, the book is solution-oriented. It's accompanied by Python code in the form of Jupyter notebooks to help you obtain hands-on experience. A recurring pattern in the chapters of this book is helping you get some intuition on the data and then implement and contrast various solutions. By the end of this book, you'll be able to understand and apply various techniques with Python for text preprocessing, text representation, dimensionality reduction, machine learning, language modeling, visualization, and evaluation. What you will learn Understand fundamental concepts of

machine learning for textDiscover how text data can be represented and build language modelsPerform exploratory data analysis on text corporaUse text preprocessing techniques and understand their trade-offsApply dimensionality reduction for visualization and classificationIncorporate and fine-tune algorithms and models for machine learningEvaluate the performance of the implemented systemsKnow the tools for retrieving text data and visualizing the machine learning workflowWho this book is for This book is for professionals in the area of computer science, programming, data science, informatics, business analytics, statistics, language technology, and more who aim for a gentle career shift in machine learning for text. Students in relevant disciplines that seek a textbook in the field will benefit from the practical aspects of the content and how the theory is presented. Finally, professors teaching a similar course will be able to pick pertinent topics in terms of content and difficulty. Beginner-level knowledge of Python programming is needed to get started with this book.
