Design and Implementation of Healthcare Biometric Systems Kisku, Dakshina Ranjan,Gupta, Phalguni,Sing, Jamuna Kanta,2019-01-11 Healthcare sectors often deal with a large amount of data related to patients' care and hospital workforce management. Mistakes occur, and the impending results are disastrous for individuals' personal identity information. However, an innovative and reliable way to safeguard the identity of individuals and provide protection of medical records from criminals is already in effect. Design and Implementation of Healthcare Biometric Systems provides innovative insights into medical identity theft and the benefits behind biometrics technologies that could be offered to protect medical records from hackers and malicious users. The content within this publication represents the work of ASD screening systems, healthcare management, and patient rehabilitation. It is designed for educators, researchers, faculty members, industry practitioners, graduate students, and professionals working with healthcare services and covers topics centered on understanding the practical essence of next-generation healthcare biometrics systems and future research directions.

Automated Biometrics David D. Zhang,2013-11-11 Biometrics-based authentication and identification are emerging as the most reliable method to authenticate and identify individuals. Biometrics requires that the person to be identified be physically present at the point-of-identification and relies on `something which you are or you do' to provide better security, increased efficiency, and improved accuracy. Automated biometrics deals with physiological or behavioral characteristics such as fingerprints, signature, palmprint, iris, hand, voice and face that can be used to authenticate a person's identity or establish an identity from a database. With rapid progress in electronic and Internet commerce, there is also a growing need to authenticate the identity of a person for secure transaction processing. Designing an automated biometrics system to handle large population identification, accuracy and reliability of authentication are challenging tasks. Currently, there are over ten different biometrics systems that are either widely used or under development. Some automated biometrics, such as fingerprint identification and speaker verification, have received considerable attention over the past 25 years, and some issues like face recognition and iris-based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications. However, very few books are exclusively devoted to such issues of automated biometrics. Automated Biometrics: Technologies and Systems systematically introduces the technologies and systems, and explores how to design the corresponding systems with in-depth discussion. The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security.

Vein Pattern Recognition Chuck Wilson,2010-03-10 As one of the most promising biometric technologies, vein pattern recognition (VPR) is quickly taking root around the world and may soon dominate applications where people focus is key. Among the reasons for VPR's growing acceptance and use: it is more accurate than many other biometric methods, it offers greater resistance to spoofing, it focuses

She Closed people for a living. It was a lonely demeaning existence, though she wouldn't admit it. There was nothing to drive her in the bleak reality until one day she ran into Kat. Kat, also known as the Pandora Project, was hunted by bio-mechas called Un-Men. She was an experiment of the Sphinx Corporation, and they were testing her to see if she could be the ultimate weapon. Kat refused to be a killer and tried to discover the truth behind her existence. Could she be a new form of bio-mecha? Kim discovered someone close to her had been murdered. Certain Investigations on Transform Based Techniques in Palmprint and Finger Knuckle-Print Biometrics for Personal Authentification N.B. Mahesh Kumar,K. Premalatha,2017-11-06 Scientific Essay from the year 2016 in the subject Communications - Multimedia, Internet, New Technologies, grade: 7.0, Bannari Amman Institute of Technology, course: Ph.D, language: English, abstract: Biometric methods for authenticating and identifying people are increasingly used in both the commercial and private sector. Today's commercially available biometric systems show good reliability. However, they generally lack user acceptance. Users showed an antipathy towards touching a possibly dirty fingerprint scanner, or looking into an iris scanner that might malfunction and eventually impair their vision. Whether those fears are well founded or not is less important. The fact is, they have considerable influence on user acceptance. And user consent is important for a good and successful application of a biometric system, as well as for good recognition rates. In response to the increasing demand for reliable as well as user friendly biometric systems, this work investigates the applicability of palmprint and FKP were the biometric features for authentication. Using palmprint or FKP as a biometric system avoids such problems as shown before, since it requires no subject interaction. The main objectives of the thesis are: to propose the transform based techniques that is used to achieve higher recognition accuracy and lower equal error rate; and to examine the performance of the proposed techniques with the existing methodologies.

ERS CASSIOPEIA S.F. Swem,2016-05-14 A long way from the center of the known cosmos lies an empty sector of space, now the home of an artificial sphere caused by a disastrous black hole project. Surrounding this manmade moon is an ever-changing, ever-moving swirling cloud of discarded projects known as the Junk Yard, guarded by a sentient artificial intelligence (AI) known as the 'Dog'. On the edge of the debris field, corporations, governments, military, and private research facilities are constantly competing to push the boundaries of science. Deep within the Junk Yard is a unique research station called Research One -- the only true connection to the Dog, and the station is the governing authority of the Junk Yard. Thanks to the full resources, brightest minds, and cutting-edge materials and technology provided by Research One, Captain Frank Walker creates a one-of-a-kind ship, Exploration & Research Ship (ERS) Cassiopeia. All of the research phases, test runs, trials, and upgrades are moving along as planned until the Cassiopeia's exceptional AI detects an emergency situation at a highly classified military outpost. Cassiopeia and her crew are ordered by the Dog to respond and assist, but helping the military always comes with a price. Join us for a wild ride through space, and read how ERS Cassiopeia goes from a prototype concept to a ship like no other.

Advanced Pattern Recognition Technologies with Applications to Biometrics Zhang, David,Song, Fengxi,Xu, Yong,Liang, Zhizhen,2009-01-31 This book focuses on two kinds of advanced biometric recognition technologies, biometric data discrimination and multi-biometrics--Provided by publisher.

Advanced Biometrics David Zhang,Guangming Lu,Lei Zhang,2017-08-08 This book describes a range of new biometric technologies, such as high-resolution fingerprint, finger-knuckle-print, multi-spectral backhand, 3D fingerprint, tongueprint, 3D ear, and multi-spectral iris technologies. Further, it introduces readers to efficient feature extraction, matching and fusion algorithms, in addition to developing potential systems of its own. These advanced biometric technologies and methods are divided as follows: 1. High-Resolution Fingerprint Recognition; 2. Finger-Knuckle-Print Verification; 3. Other Hand-Based Biometrics; and 4. New Head-Based Biometrics. Traditional biometric technologies, such as fingerprint, face, iris, and palmprint, have been extensively studied and addressed in many research books. However, all of these technologies have their own advantages and disadvantages, and there is no single type of biometric technology that can be used for all applications. Many new biometric technologies have been developed in recent years, especia lly in response to new applications. The contributions gathered here focus on how to develop a new biometric technology based on the requirements of essential applications, and how to design efficient algorithms that yield better performance.

Securing Biometrics Applications Charles A. Shoniregun,Stephen Crosier,2008-03-06 Biometrics is becoming increasingly common in establishments that require high security such as state security and financial sectors. The increased threat to national security by terrorists has led to the explosive popularity of biometrics. Biometric devices are now available to capture biometric measurements such as fingerprints, palm, retinal scans, keystroke, voice recognition and facial scanning. However, the accuracy of these measurements varies, which has a direct relevance on the levels of security they offer. With the need to combat the problems related to identify theft and other security issues, society will have to compromise between security and personal freedoms. Securing Biometrics Applications investigates and identifies key impacts of biometric security applications, while discovering opportunities and challenges presented by the biometric technologies available.
