Living with Florida's Atlantic Beaches David M. Bush,2004 A call to live with the coast, as opposed to living at the coast; unless Florida coastal communities conserve beaches and mitigate storm impacts, the future of the beach-based economy is in question.

Living with the East Florida Shore Orrin H. Pilkey,1984 More than one transplanted Floridian has paid \$150,000 for a beautiful condominium with a sea view only to learn that, to keep the building from becoming part of the view, considerable additional money must be spent to build and repair seawalls or to pump up new beaches by dredging sand from offshore. Most of Florida's beachfront property lies on narrow strips of sand called barrier islands, which are low in elevation and subject to flooding during storms and hurricanes. Some of the construction is poor, adding to the problems facing homeowners, most whom came from other parts of the country with little awareness of the hazards of beaches. In Living with the East Florida Shore, Orrin H. Pilkey, Jr., of Duke University, along with his co-authors, has described the varied problems that confront the east shore of Florida today.

Pleasant City, West Palm Beach Everee Jimerson Clarke,2005 Pleasant City, a neighborhood of West Palm Beach, Florida, is the oldest African-American community in Palm Beach County. The first black settlers came to a place called the Styx--later owned by white millionaires who then rented their backyards to black workers--to work on the railroad and Henry Flagler's hotel and mansion. Forced out when the land became valuable, the blacks purchased land and settled Pleasant City. Pleasant City was marketed as a High Class Colored Subdivision in 1913, and many of the pioneers still have descendants in the area today.

Its deeply rooted history makes it a perennial destination, with more than 3.5 million visitors each year. Although it is one of the most high profile towns in the country, Newport is also one of the most cloistered. Private Newport: At Home and in the Garden offers an invitation to

venture beyond the privet hedges and massive iron gates. It is the first book to step inside the privately owned mansions to reveal a diverse collection of architectural jewels complemented by spectacular gardens. These homes, created by distinguished architects and landscape designers, are stunning examples of Newport's 375-year old-world heritage. Eighteen exquisite and unique homes are prominently featured-from the resilient crescent curve of majestic Seafair, which withstood the Hurricane of '38, to the prizewinning Japanese garden at Wildacre, to the nostalgic working farm of heritage breeds at Swiss Village-each contributing its own part to the Eden of America.

Tropical Marine Mollusks Edward J. Petuch,David P. Berschauer,2020-12-10 Marine biogeography, the study of the spatial distribution of organisms in the world's oceans, is one of the most fascinating branches of oceanography. This book continues the pioneering research into the distributions of molluscan faunas, first studied by biologists over 160 years ago. It illustrates 1778 species of gastropods in full color, many of which are extremely rare and poorly known endemic species that are illustrated for the first time outside of their original descriptions. The spatial arrangements of malacofaunas shown in this book can be considered proxies for worldwide oceanic conditions and used as tools for determining patterns of global climate change. The book's documentation of evolutionary hot spots and geographically restricted endemic faunas can also be used as a base line for future studies on patterns of environmental deterioration and extinction in the marine biosphere. Documenting the evolution of the amazingly rich worldwide gastropod fauna, this book will appeal to physical and chemical oceanographers, systematic and evolutionary biologists, historical geologists, paleontologists, climatologists, geomorphologists, and physical geographers. The authors incorporate aspects of all of these disciplines into a new classification system for the nomenclature of biogeographical spatial units found in tropical, subtropical, and warm temperate seas.
