Steve Gordon

Tim Westergren and Pandora Sheena Ganchinello, 2013-07-15 The brainchild of founder Tim Westergren, Pandora Internet Radio is a Web-based service that provides a unique, personalized music stream to each listener. Utilizing a wealth of information supplied to a database by trained music analysts, Pandora responds to listeners' musical tastes, playing songs that share characteristics with their favorite songs or artists. This title tells the fascinating story of how Westergren's innovative company developed out of his personal interests and experiences. Enhanced with sidebars, fact sheets, and a timeline, it details Westergren's journey in bringing Pandora from concept to reality in the digital marketplace.

Managing a media company in the "digital age". The effects of Web 2.0 and social media on music industry Sascha Gnoss, 2014-09-18 Studienarbeit aus dem Jahr 2014 im Fachbereich Medien / Kommunikation - Multimedia, Internet, neue Technologien, Note: 1,3, Rheinische Fachhochschule Köln, Veranstaltung: International Marketing and Media Management, Sprache: Deutsch, Abstract: The music industry is in the midst of change. This change has been triggered by the influence of new media, such as the Internet or mobile telephones, which contribute to an increasing digitalisation of society during the last years. The results of the growing digitalisation are changes in the consumer behaviour, new devices and also new sales channels. Supply and demand of music products is greater today than ever before; however, the music industry generates only little capital because of illegal downloads and small revenues of the digital music market (Thurner, 2010, pp.5). In the course of the digitalisation, new media plays a big role. Like Peter R. Scott and Mike Jacka put it: "social media is the set of Web-based broadcast technologies that enable the democratization of content, giving people the ability to emerge from consumer of content to publishers" (Scott and Jacka, 2011, pp.5). Due to social media, people have the opportunity to communicate with people all over the world, to share pictures, videos, and audio files (Safko and Brake, 2009, pp.6). Interesting songs or videos are going to spread rapidly from YouTube within social networks like Facebook and Twitter. Therefore, unknown artists can become stars overnight (Urbanowicz, 2013). The digitalisation and social media have changed the framework of the music industry and because of that the management topics of the music companies changed as well. This assignment identifies and discusses the management topics a company has to deal with in the music industry in the digital age. In chapter one the author explains the new framework of the web 2.0 and therefore the changing consumption habits of the consumer. Also the paper identifies the changes of the consumption of music by social media. In chapter two in the scope of this assignment, old and new communication models will be presented and analysed. Also the important management topics will be explained and further the effect on the music industry will be established. For exemplification of both subjects the author makes use of the company Pandora Internet Radio.

Why You Like It Nolan Gasser, 2020-04-28

Popular Music in a Digital Music Economy Tim J. Anderson, 2013-12-17 In the late 1990s, the MP3 became the de facto standard for digital audio files and the networked computer began to claim a significant place in the lives of more and more listeners. The dovetailing of these two circumstances is the basis of a new mode of musical production and distribution where new practices emerge. This book is not a definitive statement about what the new music industry is. Rather, it is devoted to what this new industry is becoming by examining these practices as experiments, dedicated to negotiating what is replacing an object based industry oriented around the production and exchange of physical recordings. In this new economy, constant attention is paid to the production and licensing of intellectual property and the rise of the social musician who has been encouraged to become more entrepreneurial. Finally, every element of the industry now must consider a new type of audience, the end user, and their productive and distributive capacities around which services and musicians must orient their practices and investments.

How to Start Internet Radio Muzec Adem,2020-10-30 Internet radio services are usually accessible from anywhere in the world with a suitable internet connection available; one could, for example, listen to an Australian station from Europe and America. This has made internet radio particularly suited to and popular among expatriate listeners. Nevertheless, some major networks like TuneIn Radio, Entercom, Pandora Radio, iHeartRadio and Citadel Broadcasting (except for news/talk and sports stations) in the United States, and Chrysalis in the United Kingdom, restrict listening to in-country due to music licensing and advertising issues. Internet radio is also suited to listeners with special interests, allowing users to pick from a multitude of different stations and genres less commonly represented on traditional radio. Internet radio (also web radio, net radio, streaming radio, e-radio, IP radio, online radio) is a digital audio service transmitted via the Internet. Broadcasting on the Internet is usually referred to as webcasting since it is not transmitted broadly through wireless means. It can either be used as a stand-alone device running through the internet, or as software running through a single computer. Internet radio is generally used to communicate and easily spread messages through the form of talk. It is distributed through a wireless communication network connected to a switch packet network (the internet) via a disclosed source. Internet radio involves streaming media, presenting listeners with a continuous stream of audio that typically cannot be paused or replayed, much like traditional broadcast media; in this respect, it is distinct from on-demand file serving. Internet radio is also distinct from podcasting, which involves downloading rather than streaming. Internet radio services offer news, sports, talk, and various genres of music-every format that is available on traditional broadcast radio stations. Many Internet radio services are associated with a corresponding traditional (terrestrial) radio station or radio network, although low start-up and ongoing costs have allowed a substantial proliferation of independent Internet-only radio stations. The first Internet radio service was launched in 1993. As of 2017, the most popular internet radio platforms and applications in the world include (but are not limited to) TuneIn Radio, iHeartRadio, and Sirius XM.

Electronic Commerce 2018 Efraim Turban,Jon Outland,David King,Jae Kyu Lee,Ting-Peng Liang,Deborrah C. Turban,2017-10-12 This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook , LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

Sound Streams Andrew J Bottomley, 2020-06-01 In talking about contemporary media, we often use a language of newness, applying words like “revolution” and “disruption.” Yet, the emergence of new sound media technologies and content—from the earliest internet radio broadcasts to the development of algorithmic music services and the origins of podcasting—are not a disruption, but a continuation of the century-long history of radio. Today’s most innovative media makers are reintroducing forms of audio storytelling from radio’s past. Sound Streams is the first book to historicize radio-internet convergence from the early ’90s through the present, demonstrating how so-called new media represent an evolutionary shift that is nevertheless historically consistent with earlier modes of broadcasting. Various iterations of internet radio, from streaming audio to podcasting, are all new radio practices rather than each being a separate new medium: radio is any sound media that is purposefully crafted to be heard by an audience. Rather than a particular set of technologies or textual conventions, web-based broadcasting combines unique practices and features and ideas from radio history. In addition, there exists a distinctive conversationality and reflexivity to radio talk, including a propensity for personal stories and emotional disclosure, that suits networked digital media culture. What media convergence has done is extend and intensify radio’s logics of connectivity and sharing; sonically mediated personal expression intended for public consideration abounds in online media networks. Sound Streams marks a significant contribution to digital media and internet studies. Its mix of cultural history, industry research, and genre and formal analysis, especially of contemporary audio storytelling, will appeal to media scholars, radio and podcast practitioners, audio journalism students, and dedicated podcast fans.

Radio 2.0 Matthew Lasar, 2016-03-14 Welcome to the uncertain world of Radio 2.0—where podcasts, mobile streaming, and huge music databases are the new reality, as are tweeting deejays and Apple's Siri serving as music announcer—and understand the exciting status this medium has, and will continue to have, in our digitally inclined society. How did popular radio in past decades—from President Franklin D. Roosevelt's Fireside Chats in the 1930s through Top 40 music and Rush Limbaugh's talk radio empire—shape American society? How did devices and systems like the iPhone, Pandora, and YouTube turn the radio industry upside-down? Does radio still have a future, and if so, what will we want it to look like? *Radio 2.0: Uploading the First Broadcast Medium*

covers the history and evolution of Internet radio, explaining what came before, where Internet radio came from, and where it is likely headed. It also gives readers a frame of reference by describing radio from its introduction to American audiences in the 1920s—a medium that brought people together through a common experience of the same broadcast—and shows how technologies like digital music and streaming music services put into question the very definition of radio. By examining new radio and media technologies, the book explores an important societal trend: the shift of media toward individualized or personalized forms of consumption.
