Food Truths from Farm to Table Michele Payn,2017-03-20 Don't believe everything you're told about food—most of it is highly misleading or completely untrue. Written by a farm and food advocate, this book identifies marketing half-truths and guides you through the aisles of the grocery store to simplify smart food shopping and restore your freedom to enjoy food. What is the only food on your dinner table that does not contain hormones? How can animals raised for food also be treated with respect? Is it true that a typical serving of broccoli has more estrogen than a serving of steak? Why is more than 40 percent of food wasted in the United States? Food Truths from Farm to Table: 25 Surprising Ways to Shop & Eat without Guilt answers all of these questions and many more, bringing an unheard voice into the highly emotional food debate. Authored by Michele Payn, a leading farm and food advocate with an in-depth understanding of both sides of the plate, this intriguing book helps readers understand how food is really produced, answers food critics, and points out how food marketing and labels are often half-truths or even less-than-half truths. These 25 food truths enable an understanding of how food is grown, providing a transparent window into today's farming and ranching practices that empowers you to make informed personal choices and determine what is right for your family. Each chapter presents a farm or ranch story, answers questions around a major issue, provides science-based information, and includes a sidebar section of food truths and myths. Readers will gain insights from a food expert who offers a viewpoint that stands in stark contrast to the typical sensationalist and often negative perspective on fashionable food—accurate information that will help you to better trust the intentions and processes in farming and ranching. The revelations in this book will simplify food shopping, reduce guilt about being a consumer, and give you the freedom to enjoy your food again.

*Nutrition-sensitive value chain analysis for carrot and papaya in Al Batinah North, Oman* Food and Agriculture Organization of the United Nations,2022-05-11 The Sultanate of Oman is experiencing a nutrition transition, characterized by shifts in diet, lifestyle and disease burden. The National Nutrition Strategy of Oman 2014-2050 and the Sustainable Agriculture and Rural Development Strategy SARDS 2040 have emphasized the importance of adequate intake of fruits and vegetables while decreasing the consumption of energy-dense foods. FAO collaborated with the Ministry of Agriculture, Fisheries and Water Resources (MAFWR) and Zubair Small Enterprises Centre (Zubair SEC) to conduct an inclusive Nutrition Sensitive Value Chain Analysis (NSVCA). The geographical focus was on Al Batinah North, one of the main agricultural governorates in Oman. Two commodities were selected by MAFWR and the Ministry of Health based on a scoring method: papaya and carrots. This NSVCA aimed at mapping the current landscape of constraints and opportunities in supply and demand of safe and nutritious food commodities across these two value chains. It focuses on SMEs related to food and agriculture, farmer organizations, smallholders and other actors along the value chains. The NSVCA contributes mainly to SO1, SO3 and SO4 through improved knowledge of the food system in Oman and providing a variety of evidence based intervention and investment opportunities along the value chain. The findings will allow decision-makers to identify specific policy interventions which will leverage the potential of these value chains for both income generation and better nutrition outcomes.

**The pollination of cultivated plants: A compendium for practitioners** Food and Agriculture Organization of the United Nations,2018-10-15 More than twenty years ago, the Food and Agriculture Organization of the United Nations contributed to the growing recognition of the role of pollination in agricultural production, with the publication of “The Pollination of Cultivated Plants in the Tropics”. Since that time, the appreciation of pollinators has grown, alongside the realization that we stand to lose them. But our knowledge and understanding of crop pollination, pollinator biology, and best management practices has also expanded over this time.This volume is the first of two “compendiums for practitioners”, sharing expert knowledge on all dimensions of crop pollination in both temperate and tropical zones. The focus in this first volume is on applied crop and system-specific pollination.
