Children and Play Peter K. Smith,2009-03-30 The role of play in child development is a source of ongoing interest and debate. In this book, renowned expert Peter Smith offers an expansive definition of the term “play”, taking an in-depth look at its impact on children, as well as its adaptive value for birds and mammals, including primates. Using both contemporary and classic research, Smith examines how different age groups and sexes participate in a wide variety of play, including exercise and rough-and- tumble play, fantasy play and imaginary friends, and play with objects. The book gauges the function of play in early childhood education and makes the case for and against recess breaks in school. How play occurs in different societies and among various populations – including children with special needs – is also explored. With its comprehensive coverage of theoretical, historical, cross-cultural, and evolutionary perspectives, Children and Play holds significant insights for parents, educators, and clinicians.

OECD-FAO Agricultural Outlook 2023-2032 OECD,Food and Agriculture Organization of the United Nations,2023-07-06 The OECD-FAO Agricultural Outlook 2023-2032 provides a consensus assessment of the ten-year prospects for agricultural commodity and fish markets at national, regional, and global levels, and serves as a reference for forward-looking policy analysis and planning. Recent surges in agricultural input prices experienced over the last two years have raised concerns about global food security.

Strengthening the resilience of agricultural supply chains Food and Agriculture Organization of the United Nations,2023-08-25 Fresh fruits and vegetables constitute important commodities in world agricultural production, trade and consumption. Their typically high nutritional value makes fresh fruits and vegetables a critical component in ensuring global food security and nutrition. Since a large share of fruits and vegetables are produced in low income countries, concerns regarding equitable smallholder incomes and foreign exchange generation also play a special role. Over the past decade, global trade in fresh fruits and vegetables more than doubled in response to rising demand, placing this commodity group among the most valuable food

commodities in terms of export value. As such, fresh fruits and vegetables constitute telling examples of high value and sometimes delicate export crops with challenging transport needs, with supply chain disruptions negatively impacting on producers, exporters and end users. The need to keep supply chains functioning and to facilitate the availability and affordability of fresh fruits and vegetables, is of eminent importance in times of crises, whether these are linked to economic difficulties, disease outbreaks, conflict, natural disasters or other factors. This paper lays out some of the salient features of global trade in fresh fruits and vegetables and the special characteristics pertaining to their supply chain needs. It presents an investigation of market developments observed in 2020/2021 and investigates the potential implications of shocks to supply chains, in order to highlight bottlenecks to be addressed to strengthen the resilience and preparedness of supply chains in times of crises.

OECD-FAO Agricultural Outlook 2022-2031 OECD, Food and Agriculture Organization of the United Nations, 2022-06-29 The OECD-FAO Agricultural Outlook 2022-2031 provides a consensus assessment of the ten-year prospects for agricultural commodity and fish markets at national, regional, and global levels, and serves as a reference for forward-looking policy analysis and planning. Projections suggest that, following a business-as-usual path, SDG 2 on Zero Hunger would not be achieved by 2030 and greenhouse gas (GHG) emissions from agriculture would continue to increase.

OECD-FAO Agricultural Outlook 2022-2031 Organisation for Economic Co-operation and Development, Food and Agriculture Organization of the United Nations, 2022-06-30 The Agricultural Outlook 2022-2031 is a collaborative effort of the Organisation for Economic Co-operation and Development (OECD) and the Food and Agriculture Organization (FAO) of the United Nations. It brings together the commodity, policy and country expertise of both organisations as well as input from collaborating member countries to provide an annual assessment of the prospects for the coming decade of national, regional and global agricultural commodity markets. The publication consists of 11 Chapters; Chapter 1 covers agricultural and food markets; Chapter 2 provides regional outlooks and the remaining chapters are dedicated to individual commodities.

OECD-FAO Agricultural Outlook 2021-2030 OECD, Food and Agriculture Organization of the United Nations, 2021-07-05 The OECD-FAO Agricultural Outlook 2021-2030 is a collaborative effort of the Organisation for Economic Co-operation Development (OECD) and the Food and Agricultural Organization (FAO) of the United Nations, prepared with input from Member governments and international commodity organisations. It provides a consensus assessment of the ten-year prospects for agricultural commodity, fish and biofuel markets at national, regional and global levels, and serves as a reference for forward-looking policy analysis and planning. The OECD-FAO Agricultural Outlook 2021-2030 presents the trends driving food and agricultural markets over the coming decade. While progress is expected on many important fronts, in order to realize the 2030 Agenda and achieve the sustainable development goals (SDGs), concerted actions and additional improvements will be needed by the agricultural sector. Handbook of Fruit Wastes and By-Products Khalid Muzaffar, Sajad Ahmad Sofi, Shabir Ahmad Mir, 2022-10-03 Processing of fruits produces large volumes of wastes and by-products, which can create environmental problems. However, these fruit processing residues have amazing nutritional composition, containing good amounts nutrients and biofunctional components. So, the current trend in the present world is to efficiently utilize these fruit wastes and byproducts and minimizing their impact on the environment. Proper utilization of fruit processing wastes and by-Products would not only emerge as a source of extra profit to the fruit processing industry but also will help in lessen the environment pollution due to these fruit processing byproducts. ‘*Handbook of Fruit Wastes and By-Products: Chemistry, Processing Technology and Utilization*’ will be the first book devoted to fruit processing wastes and by-products of wide range of important fruits including tropical, subtropical, and temperate fruits. Key features: · Provides comprehensive information about the chemistry of wastes and byproducts obtained during fruit processing · Provide in-depth information about the bioactive potential of fruit processing wastes and byproducts · Explores new strategies used for proper valorization of fruit processing residues · Describes the utilization of nutraceutical components derived from fruit processing residues in fabrication of novel functional foods Although, there are some general books on byproducts of food processing industry, but they are limited in context, related to only some particular fruits. The unique quality of this book is that it provides a full-length study of the different developments made right from the basic technologies involved in management of fruit wastes and byproducts to the recent advancements and future areas of research to be done on this subject. This book would be a valuable resource for scientists, researchers, professionals, and enterprises that aspire in management of fruit processing wastes and byproducts, and their utilization.

Ecology and Evolution of Plants under Domestication in the Neotropics Alejandro Casas, Ana H. Ladio, Charles R. Clement, 2019-09-25 The Neotropical area is a main setting of the earliest experiences of domestication of plants, and evolutionary processes guided by humans, which continue

being active in the area. Studies comprised in this Research Topic show a general panorama about similarities and particularities of processes of domestication for different plant groups and regions, some of them illustrate how the domestication processes originated and diffused, how landscape domestication has operated and continues being practiced and others discuss some of the main challenges for designing policies for biosafety and conservation of plant genetic resources. It is an attempt to identify main topics for research on evolution under domestication, and opportunities that researchers can find in the Neotropics to understand how and why these processes occurred in the past and present.

Pondering Papaya Flowers' Fragrance Corey Fox,

Startup Communities Brad Feld,2020-06-25 First published in 2012, Startup Communities became a blueprint for what it takes to build a supportive entrepreneurial community. Now regarded as a classic, the Boulder Thesis created and popularized by Feld within the book generated enormous media attention nearly a decade ago. At that time, Boulder was an emerging startup laboratory—a hub of innovation building new tech businesses. It quickly accelerated into a world class ecosystem for entrepreneurs. Boulder's entrepreneurial density, combined with the geographic concentration of entrepreneurial activity around the Boulder downtown core, made it a hotbed of startup activity. Feld was and is still there, as a keen observer and one

of its leaders. As he notes simply in the new edition, humans are wired to start things. In a sense, that short Feld-ism accurately describes the startup revolution still taking hold throughout the world. Boulder is proof that innovation can happen anywhere, in any city. Thanks in part to the book, what happens in Boulder now leaves Boulder. Rapidly growing startup communities in Atlanta, Detroit, Denver, Kansas City, Nashville, and Indianapolis are just a few examples. Over the last decade, Feld has dispelled the myth that startups can only thrive in Silicon Valley. Startup communities continue to pop up across the U.S. and around the world, prompting fresh new revelations and stories from Feld about what's happened over the last decade. Startup Communities 2e describes what makes a startup community ecosystem first click, then hum, and in time, excel. From Boulder to Beijing and beyond, entrepreneurial ecosystems are driving innovation. Startup Communities 2e discusses and the necessary dynamics and pre-conditions of building communities of entrepreneurs who can feed off each other's talent, creativity, and support. In Startup Communities 2e, Feld will help you understand: The core principles of a vibrant startup community, re-examining his Boulder Thesis and exploring other historical frameworks. The attributes of leadership in a startup community that can help it thrive along with the classical problems any community will face during development. The importance of a university in a startup community, and how large companies can engage effectively with entrepreneurs. The importance of continuous improvement so growth does not stagnate. The common myths about startup communities. The opportunities to build startup communities in non-urban, or rural, places that are much less populated.
