Defending Australia in the Asia Pacific Century Australian Government - Department of Defence - Defence Publishing Service, Joel Fitzgibbon, 2009 This new Defence White Paper explains how the Government plans to strengthen the foundations of Australia's defence. It sets out the Government's plans for Defence for the next few years, and how it will achieve those plans. Most importantly, it provides an indication of the level of resources that the Government is planning to invest in Defence over coming years and what the Government, on behalf of the Australian people, expects in return from Defence. Ultimately, armed forces exist to provide Governments with the option to use force. Maintaining a credible defence capability is a crucial contributor to our security, as it can serve to deter potential adversaries from using force against us or our allies, partners and neighbours.

Defense Procurement In The Federal Republic Of Germany Regina H.E. Cowen, 2021-11-18 First published in 1986. Based on the theme that defense procurement serves as an instrument of alliance and domestic politics, this book provides the first comprehensive analysis of post-war West German approaches to and experience with procurement strategies. Dr. Cowen explores how successive German governments have used military procurement to facilitate the rehabilitation of the new West German state and later to consolidate the German position within the alliance. The author shows that by the mid-1970s the Federal Republic had succeeded in its procurement policy, acting as a serious partner for defense projects in Europe and building a flourishing defense industry. The book's final chapters describe the structural tensions between competing procurement objectives that have recently emerged. The FRG must decide whether to continue to maintain a whole range of defense industrial capacities or to specialize nationally and purchase other necessary commodities in the United States. According to the author, national specialization is not seriously considered by the German government. Such a step, the author suggests, would diminish Germany's role in the alliance and jeopardize one of its foremost foreign policy goals: equality with Great Britain and France

Global Defense Procurement and the F-35 Joint Strike Fighter Bert Chapman, 2018-12-27 This book analyzes the development and evolution of the F-35 Joint Strike Fighter, a multinational aircraft endeavor involving the U.S. and many of its allies. The author provides a historical overview of jet fighter aircraft, discussing the different generations of these planes and their technical characteristics, as well as an outline of emerging international geopolitical and security trends the F-35 may see combat in. By examining the role of defense industries, domestic politics, and governmental oversight of the Joint Strike Fighter in various countries, the author concludes that this aircraft will be deployed in most of these countries to replace their aging jet fighter fleets and combat potential military aggression from China, Russia, and other revisionist international powers.

National Defense Intelligence College Paper Department of Defense, National Defense Intelligence College, National Intelligence University, Center for Strategic Intelligence Research, U. S. Government, 2018-05-17 This unique and informative paper was produced by the National Intelligence University / National Defense Intelligence College. Topics and subjects include: interrogation of terrorists, the McCain Amendment, KUBARK counterintelligence interrogation, MKULTRA, CIA, torture, pain and physical discomfort, sleep loss and deprivation, sensory deprivation, subliminal persuasion, mechanical detection of deception, polygraphy, psychophysiological mechanisms, electrogastrogram, eye blinks, saccades, and fixations, voice stress analysis, thermal imaging, truth serums and narcoanalysis, sodium amytal, neurological mechanisms, transcranial magnetic stimulation, electroencephalography (EEG), functional MRI, communist interrogation methods, HUMINT, criminal custodial interrogations, good cop / bad cop, FBI training, FLETC, detective case studies, OODA loop negotiations. Educating Information is a profoundly important book because it offers both professionals and ordinary citizens a primer on the science and art of both interrogation and intelligence gathering. Because this is a book written by and for intelligence professionals, it starts exactly where one might expect it to start - with a superb discussion of the costs and benefits of various approaches to interrogation. For those who are unschooled in the art and science of intelligence gathering, careful study of the table of contents is perhaps the best way to decide which of the papers would provide the most convenient portal through which to enter a realm that is, by the admission of the authors themselves, both largely unexplored and enormously important to our national security. The excellent paper on the KUBARK Counterintelligence Interrogation Review provided just the historical and theoretical background needed. Don't expect Educating Information to become required reading among the Hollywood screen writer set anytime soon, but it certainly should be. All of us could learn quite a lot. In World War II, the United States military developed a secret offensive program, called MIS-Y, designed to obtain intelligence from captured adversaries. This educating information program (though it was not described as such at the time) was designed to obtain intelligence from senior German officials, officers, and scientists in U.S. custody. German officers, scientists, and officials were monitored on a 24-hour basis; information was also collected from them while they were in formal interrogation sessions, while they conversed with their roommates and colleagues, and at other times. The information was analyzed on an ongoing basis, with dossiers of the internees updated regularly. Intelligence was developed and disseminated to military commands and organizations. The MIS-Y program ended with the conclusion of WWII. With the attacks of 11 September 2001, and the initiation of the Global War on Terrorism, the Intelligence Community plunged into activities that, of necessity, involved efforts to obtain information from persons in U.S. custody who at least initially appeared uncooperative. At holding facilities in Afghanistan, Cuba, Iraq, and perhaps other sites, active duty military personnel, reservists, intelligence officers, law enforcement agents, contracted interrogators, and others worked to glean information and create intelligence that might help prevent terrorist attacks and contribute to national security. Since there had been little or no development of sustained capacity for interrogation practice, training, or research within intelligence or military communities in the post-Soviet period, many interrogators were forced to make it up on the fly. This shortfall in advanced, research-based interrogation methods at a time of intense pressure from operational commanders to produce actionable intelligence from high-value targets may have contributed significantly to the unfortunate cases of abuse that have recently come to light.

Who Watches the Watchmen? could hardly be more timely as we debate the recent leaking of the largest trove of documents in American history. The WikiLeaks case drives home the need for what this book lays out: an approach to protecting classified information that goes beyond law enforcement. Gary Ross' application of Rational Choice Theory codifies, organizes, and extends what many of us have been trying to do instinctively when dealing with unauthorized disclosures. In Ross' discussions of motivations and justifications, I see powerful echoes of what I personally experienced as Director of NSA and CIA. I only wish I had had access to this fully developed intellectual framework and the courses of action it suggests while still in government. - General Michael V. New Federalist Papers Alan Brinkley, Nelson W. Polsby, Kathleen M. Sullivan, 1997 In the aftermath of the Constitutional Convention of 1787, three of its most gifted participants--Alexander Hamilton, James Madison, and John Jay--wrote a series of 85 essays--the Federalist Papers--which were published in newspapers throughout the nation, defending the proposed new government against its opponents. In the New Federalist Papers, three prominent writers confront the threats posed by current challenges to the American Constitution.

The Economics of the Global Defence Industry Keith Hartley, Jean Belin, 2019-11-08 This book makes an original contribution to our knowledge of the world's major defence industries. Experts from a wide range of different countries - from the major economies of North America and Western Europe to developing economies and some unique cases such as China, India, Singapore, South Africa and North Korea - describe and analyse the structure, conduct and performance of the defence industry in that country. Each chapter opens with statistics on a key nation's defence spending, its spending on defence R&D and on procurement over the period 1980 to 2017, allowing for an analysis of industry changes following the end of the Cold War. After the facts of each industry, the authors describe and analyse the structure, conduct and performance of the industry. The analysis of 'structure' includes discussions of entry conditions, domestic monopoly/oligopoly structures and opportunities for competition. The section on 'conduct' analyses price/non-price competition, including private and state funded R&D, and 'performance' incorporates profitability, imports and exports together with spin-offs and technical progress. The conclusion explores the future prospects for each nation's defence industry. Do defence industries have a future? What might the future defence firm and industry look like in 50 years' time? This volume is a vital resource and reference for anyone interested in defence economics, industrial economics, international relations, strategic studies and public procurement.

The Dynamics of Doctrine Timothy T. Lupfer, 1981 This paper is a case study in the wartime evolution of tactical doctrine. Besides providing a summary of German Infantry tactics of the First World War, this study offers insight into the crucial role of leadership in facilitating doctrinal change during battle. It reminds us that success in war demands extensive and vigorous training calculated to insure that field commanders understand and apply sound tactical principles as guidelines for action and not as a substitute for good judgment. It points out the need for a timely effort in collecting and evaluating doctrinal lessons from battlefield experience. --Abstract.

National Defense Intelligence College Paper Department of Defense, National Defense Intelligence College, National Intelligence University, Center for Strategic Intelligence Research, U. S. Government, 2017-05-09 This unique and informative paper was produced by the National Intelligence University / National Defense Intelligence College. Topics and subjects include: CIA analysis, internet and electronic media, analytical tradecraft, process management, U.S. Coast Guard, DIA, DODIIS, COLISEUM, JWICS, SIPRNET, OSIS, DITDS, HUGIN expert, ESRI, induction, deduction, and abduction. The title chosen for this book carries two meanings. The more straightforward interpretation of Bringing Intelligence About," and the principal one, refers to the book's coverage of wide-ranging sources and methods employed to add value to national security-related information--to create intelligence." A second meaning, not unrelated to the first, refers to the responsible agility expected of U.S. intelligence professionals, to think and act in such a way as to navigate information collection and interpretation duties with a fix on society's shifting but consensual interpretation of the U.S. Constitution. A prominent individual and ideal intelligence professional who lived both meanings of Bringing Intelligence About" was the late Lieutenant General Vernon A. Walters. As an intelligence officer, defense attache, ambassador-at-large and ambassador to Germany, his combination of skills--notably his language skills--made him the epitome of a professional. Beyond intelligence service in the Departments of Defense and of State, General Walters presided as Deputy Director of Central Intelligence during the Watergate episode, where he stood on principle and at odds with political figures in the Nixon administration. His mastery of intelligence collection, analysis and politically attuned synthesis, the full story of which has not yet been told, make him a near-mythic figure for aspiring intelligence professionals. Although the talents and assignments of General Walters were extraordinary, his demonstration that intelligence aptitudes and skills are fungible across Departments and Agencies is a powerful suggestion that those separate institutions can also operate together as a professional community. This volume helps us move down the long and difficult road of helping identify how to produce good or better intelligence--by which I mean intelligence that is of use to policymakers and is better than other intelligence by being so used. The authors have--across a range of areas of interest--identified some of the practices that work best to produce--or, more aptly, to bring about--good intelligence. Note that the preceding sentence said some of the practices. Few books could expect to identify all of the practices that work and, as the authors of each chapter would undoubtedly concede, there will always be some variables and intangibles at work in intelligence: vagaries of time to perform collection and analysis; the quality of sources; the quality of the analysts; the nature and personality of the policymakers. Still, it is possible to identify the practices that work and the practices that have to be altered over time as conditions change.
