Topic Detection and Tracking James Allan, 2002-02-28
Topic Detection and Tracking: Event-based Information Organization brings together in one place state-of-the-art research in Topic Detection and Tracking (TDT). This collection of technical papers from leading researchers in the field not only provides several chapters devoted to the research program and its evaluation paradigm, but also presents the most current research results and describes some of the remaining open challenges. Topic Detection and Tracking: Event-based Information Organization is an excellent reference for researchers and practitioners in a variety of fields related to TDT, including information retrieval, automatic speech recognition, machine learning, and information extraction

Biomedical Image Analysis Scott T. Acton, Nilanjan Ray, 2006-12-01 In biological and medical imaging applications, tracking objects in motion is a critical task. This book describes the state-of-the-art in biomedical tracking techniques. We begin by detailing methods for tracking using active contours, which have been highly successful in biomedical applications. The book next covers the major probabilistic methods for tracking. Starting with the basic Bayesian model, we describe the Kalman filter

and conventional tracking methods that use centroid and correlation measurements for target detection. Innovations such as the extended Kalman filter and the interacting multiple model open the door to capturing complex biological objects in motion. A salient highlight of the book is the introduction of the recently emerged particle filter, which promises to solve tracking problems that were previously intractable by conventional means. Another unique feature of Biomedical Image Analysis: Tracking is the explanation of shape-based methods for biomedical image analysis. Methods for both rigid and nonrigid objects are depicted. Each chapter in the book puts forth biomedical case studies that illustrate the methods in action.

Tracker Joel Hardin, Matt Condon, 2004-01-01 Tracker is a much requested recounting of homicide case files, missing person searches and other legendary adventures of Joel Hardin during his thirty year law enforcement and tracking career. True tracking skill is detailed in a wide variety of cases from the tracking and capture of armed fugitive Artie Ray Baker who executed a U.S. Customs Inspector to the following of six-week old footprints to find trekker Robert Bogucki in the Great Sandy Desert of

Western Australia. Joel tells of his beginning with the U.S. Border Patrol and surreptitious border crossers where he became a recognized Sign Cutter and tracking expert. Technical tracking chapters of Tracking Basics, Sign Aging and Advanced Tracking provide reader insight to understand tracking concepts and Joel's principle?trackers see that which others look at and do not see.? Walk the trails of true tracking adventures with Joel as he tells the stories in his ?round the campfire? style.

Comparison of Four Filtering Options for a Radar Tracking Problem ,1997 Four different filtering options are considered for the problem of tracking an exoatmospheric ballistic target with no maneuvers. The four filters are an alpha-beta filter, an augmented alpha-beta filter, a decoupled Kalman filter, and a fully-coupled extended Kalman filter. These filters are listed in the order of increasing computational complexity. All of the filters can track the target with some degree of accuracy. While the pure alpha-beta filter appreciably lags the other filters in performance for this problem, its augmented version is very competitive with the extended Kalman filter under benign conditions. Perhaps the most surprising result is that under all conditions examined, the decoupled (linear) Kalman filter, which is at least an order of magnitude less computationally complex, performs nearly identical to the coupled, extended Kalman filter. Adaptive Robust Control Systems Anh Tuan Le, 2018-03-07 This book focuses on the applications of robust and adaptive control approaches to practical systems. The proposed control systems hold two important features: (1) The system is robust with the variation in

plant parameters and disturbances (2) The system adapts to parametric uncertainties even in the unknown plant structure by self-training and self-estimating the unknown factors. The various kinds of robust adaptive controls represented in this book are composed of sliding mode control, model-reference adaptive control, gain-scheduling, H-infinity, model-predictive control, fuzzy logic, neural networks, machine learning, and so on. The control objects are very abundant, from cranes, aircrafts, and wind turbines to automobile, medical and sport machines, combustion engines, and electrical machines.
