SMART PARKING IN FAST-GROWING CITIES Stephan Winter, Salil Goel, 2021-07-14
Parking is a challenge for cities everywhere, but especially for cities in low- and middle-income countries. There, cities are experiencing rapid urbanization and increasing motorization, while investment capacity for parking infrastructure is limited, and despite the availability of free on-street parking, it is not used in an efficient and coordinated way. This book is meant to act as a resource for those managing urban parking challenges, particularly in low- and middle-income countries. This openAccess book can provide immediate guidance to city authorities, engineering firms, and urban planners worldwide and help develop data-driven solutions for smarter cities. The first part of this book portrays geospatial technologies in the context

of urban mobility in smart cities. The second part focuses on implementing those technologies in parking management in low and middle-income countries.

Research and Development Progress in 3D Cadastral Systems Efi

Dimopoulou, Peter Van Oosterom, 2019-10-28 The increasing complexity of infrastructures and densely built-up areas requires a proper registration of the legal status (private and public), which can only be provided to a limited extent by the existing 2D cadastral registrations. The registration of the legal status in complex 3D situations is investigated under the header of 3D Cadastres. This publication, containing 13 selected contributions on 3D Cadastre, addresses the following areas: 1. 3D Cadastre operational experiences (analysis, LADM based, learning from each other, discovering gaps), 2. 3D Cadastre cost-effective workflow for new/updated 3D parcels = 4D (part of whole chain: From planning/design/permit in 3D, to registration/use in 3D), 3. 3D Cadastre web-based dissemination (usability, man-machine interfaces, including mobile/AR), 4. legal aspects for 3D Cadastre, best legal practices in various legislation systems, focus on large cities, including developing countries, 5. 3D data management, and 6. visualization, distribution, and delivery of 3D parcels.

Architectonics of Game Spaces Andri Gerber, Ulrich Götz, 2020-03-31 What consequences does the design of the virtual yield for architecture and to what extent can the nature of architecture be used productively to turn game-worlds into sustainable places – over here, in »reality«? This pioneering collection gives an overview of contemporary developments in designing video games and of the relationships such practices have established with the design of architecture. Due to their often simulatory nature, games reveal constructions of reality while positively impacting spatial ability and

allowing for alternative avenues to complex topics and processes of negotiation. Granting insight into the merging of the design of real and virtual environments, this volume offers an invaluable platform for further debate.

Americans with Disabilities Act Handbook Henry H. Perritt, 2002-11-01 The Americans With Disabilities Act Handbook provides comprehensive coverage of the ADA's employment, commercial facilities, and public accommodations provisions as well as coverage of the transportation, communication, and federal, local, and state government requirements. In one comprehensive two-volume set, you'll get a complete analysis of the Act and all the forms and case law you'll need to prepare your case. Recognized ADA authority Henry H. Perritt, Jr., clearly defines statutory and regulatory requirements for public and private employers, commercial facilities and places of public accommodation. There's a complete analysis of the rapidly expanding case law - organized by frequently litigated topics, like wheelchair access and AIDS discrimination. In-depth analysis is provided for the numerous federal and state cases and significant regulatory activity by the EEOC cropping up each year. You'll also get thorough analysis of how the Rehabilitation Act of 1973 relates to ADA. The statutory definition of disability and the concept of being "otherwise qualified" for a job are also discussed in-depth. And you'll see exactly what employers, business owners, and providers of governmental services must do to make "reasonable accommodation." Plus, a comprehensive section that organizes case law by type of physical and mental impairment and accommodation by type of job requirement, making analysis easier. Americans With Disabilities Act Handbook has been updated to include: Analysis of a Supreme Court case finding that

Wal-Mart class action did not meet requirements of Federal Rules of Civil Procedure 23 Case law applying the 2008 Amendments and EEOC's implementing regulations Analysis of Supreme Court case providing a framework for "cat's paw" proof of disparate treatment Analysis of a Supreme Court case finding retaliation because of a fiancée's protected activity Analysis of a Supreme Court case allowing oral requests for FMLA leave Analysis of cases assessing whether the employer erroneously perceived an employee as unable to perform a "range of jobs" Discussion of a case denying safe harbor to a recovering drug abuser Analysis of case allowing an employer to assign an HIV-positive employee to train only those employees signing a waiver Discussion of a case finding that a return-to-work medical examination did not violate the ADA Analysis of the "one-strike" rule imposed by an employers' association Discussion of a case finding that reductions in paratransit services did not violate ADA New cases rejecting challenges to arbitration

The DARPA Urban Challenge Martin Buehler, Karl Iagnemma, Sanjiv Singh, 2009-11-11 By the dawn of the new millennium, robotics has undergone a major transformation in scope and dimensions. This expansion has been brought about by the maturity of the field and the advances in its related technologies. From a largely dominant industrial focus, robotics has been rapidly expanding into the challenges of the human world. The new generation of robots is expected to safely and dependably co-habitat with humans in homes, workplaces, and communities, providing support in services, entertainment, education, healthcare, manufacturing, and assistance. Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines, such as: biomechanics, haptics, neurosciences, virtual simulation, animation, surgery, and sensor networks among others. In return, the challenges of the new emerging areas are proving an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen. The goal of the series of Springer Tracts in Advanced Robotics (STAR) is to bring, in a timely fashion, the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field.
