Low Cost Strategies to Increase Truck Parking in Wisconsin ,2009 This report documents a study of truck parking issues along the major state highways in Wisconsin. The effort builds upon another project at the National Center for Freight and Infrastructure Research and Education (CFIRE) funded by the Mississippi Valley Freight Coalition to study the truck parking issues on Interstate highways in the ten-state AASHTO Mississippi Valley Region. This study also inventories both public and private parking facilities along a select number of state highways. A web geographic information system (GIS) tool was developed for continuous survey and public participation. The study surveyed highway patrol officers, public freight planners, and truckers to identify parking facilities incommensurate with truck parking needs. It proposes a method for ranking parking facilities identified as having the most need of additional truck parking capacity. Building on a review of previous studies and face-to-face interviews with carriers, the report contains a discussion of why existing parking facilities do not meet needs and describes a set of low cost strategies for addressing truckers' parking needs.

Low Cost Strategies for Short Term Parking on Interstate Highways of the MVFC ,2009 This report documents a study of truck parking issues along the major freight corridors in the 10-state MVFC region. An online GIS instrument was developed to administer surveys and allow for continuous public participation. The study surveyed highway patrol officers, public freight planners and truckers to identify parking facilities incommensurate with truck parking needs. It proposes a method to cluster marked spots for identifying areas with the most need for additional truck parking capacity. In-person carrier interviews were also conducted to further clarify truck parking problem causes and solutions. A set of low cost strategies are finally proposed to policy makers. This study also inventories both public and private parking facilities along the region's freight corridors and provides a review of previous studies--Technical report documentation page.

Bananaworld Jeffrey Bub,2016 What on earth do bananas have to do with quantum mechanics? From a modern perspective, quantum mechanics is about strangely counterintuitive correlations between separated systems, which can be exploited in feats like quantum teleportation, unbreakable cryptographic schemes, and computers with enormously enhanced computing power. Schro'dinger coined the term entanglement to describe these bizarre correlations. Bananaworld -- an imaginary island with entangled bananas -- brings to life the fascinating discoveries of the new field of quantum information without the mathematical machinery of quantum mechanics. The connection with quantum correlations is fully explained in sections written for the non-physicist reader with a serious interest in understanding the mysteries of the quantum world. The result is a subversive but entertaining book that is accessible and interesting to a wide range of readers, with the novel thesis that quantum mechanics is about the structure of information. What we have discovered is that the possibilities for representing, manipulating, and communicating information are very different than we thought.
