Fundamentals of Internet of Things for Non-Engineers Rebecca Lee Hammons,Ronald J. Kovac,2019-06-07 The IoT is the next manifestation of the Internet. The trend started by connecting computers to computers, progressed to connecting people to people, and is now moving to connect everything to everything. The movement started like a race—with a lot of fanfare, excitement, and cheering. We’re now into the work phase, and we have to figure out how to make the dream come true. The IoT will have many faces and involve many fields as it progresses. It will involve technology, design, security, legal policy, business, artificial intelligence, design, Big Data, and forensics; about any field that exists now. This is the reason for this book. There are books in each one of these fields, but the focus was always an inch wide and a mile deep. There’s a need for a book that will introduce the IoT to non-engineers and allow them to dream of the possibilities and explore the work venues in this area. The book had to be a mile wide and a few inches deep. The editors met this goal by engaging experts from a number of fields and asking them to come together to create an introductory IoT book. Fundamentals of Internet of Things for Non-Engineers Provides a comprehensive view of the current fundamentals and the anticipated future trends in the realm of Internet of Things from a practitioner’s point of view Brings together a variety of voices with subject matter expertise in these diverse topical areas to provide leaders, students, and lay persons with a fresh worldview of the Internet of Things and the background to succeed in related technology decision-making Enhances the reader’s experience through a review of actual applications of Internet of Things end points and devices to solve business and civic problems along with notes on lessons learned Prepares readers to embrace the Internet of Things era and address complex business, social, operational, educational, and personal systems integration questions and opportunities

From Incremental to Exponential Vivek Wadhwa,Ismail Amla,Alex Salkever,2020-10-06 “This timely book reminds us that innovation is agnostic about where it's created.” —Satya Nadella, CEO, Microsoft Over and over, we see big legacy businesses getting beaten to the punch by energetic little start-ups. It seems like innovation can come from only the bottom up or from the outside in. But tech experts Vivek Wadhwa and Ismail Amla are here to tell you that “big equals slow and stodgy” is a myth. Based on decades of experience working with both the world's leading brands and disruptive start-ups, this book explores the opportunity legacy companies have to create new markets, supercharge growth, and remake their businesses by combining the mindset and tool belt of start-ups with the benefits of incumbency: boatloads of customer data, decades of brand equity, robust distribution channels, enormous financial assets, and more. Wadhwa and Amla go deeply into why the pace and dynamics of innovation have changed so dramatically in recent years and show how companies can overcome obstacles like the Eight Deadly Sins of Stasis. Equally important, they provide a playbook on how to use their insights in your own company, team, or career. This fast-paced, anecdote-rich story rethinks modern innovation—a book every manager, executive, and ambitious employee will want to read.

Autonomous and Integrated Parking and Transportation Services Amalendu Chatterjee,2019-11-08 In this book, the author outlines a Robust Web Parking, Truck and Transportation Portal (RWPTTP) for integrating parking and transportation services – a revolutionary approach in contrast to incremental change for managing traffic congestion. Autonomous vehicle technology, artificial intelligence, internet of things (IOT), and other interconnected hardware and software tools will assist autonomous parking and transportation services and provide next-century infrastructure for consolidated transportation customer services. The book highlights currently available autonomous parking and transportation technologies, and the development of an integrated and intelligent transportation service/system (IITS) platform, with specific use of technologies to reconfigure the transportation industry. The author also suggests many regulatory and policy changes to simplify data collection, traffic operation, introduction of a duplicate transportation system using light rail (LRs) and high speed rail (SPRs), and redistribution of parking spaces along such routes, using renewable energy.

The FEDER Guide to Where to Park Your Car in Manhattan (and where Not to Park It!) Erik Feder,2005 The Feder Guide to Where to Park Your Car in Manhattan (and Where Not to Park It!!) has been designed to make it easier for readers to park their vehicles in Manhattan (NY). This first edition covers Downtown Manhattan - 30th Street down to Battery Park. A Midtown/Uptown edition will follow in the next six months.The book has 3 main parts to it: a helpful hints section, listings of the street parking regulations and listings of parking garages/lots. The book will also have maps of the sections of Manhattan that are covered.The helpful hints section is pretty much what it sounds like ? what to do if you get a ticket, if you're towed, what to watch out for, etc. The listings of the street parking regulations does just that - lists the complete street parking regulations for every street in the book. When a particular street is generally a great place to park, a smiley face has been placed next to the listing to indicate to readers that they are usually safe to park there. If a particular street is a terrible place to park, a frowney face has been placed there to alert the readers to avoid that street.The parking garage section will list the locations, hours, contact info, rates, etc., for participating garages in Manhattan. All the big firms who run parking facilities in Manhattan have agreed to participate and some of the smaller firms are also participating. We've done our research on this topic. For instance, in the year in 2000, an average of 22,000 parking tickets a day were written in NYC, of which Manhattan was by far the largest contributor. As noted on the back cover of the book: if by using our guide a reader saves themselves from getting just one parking ticket, our book will pay for itself up to 7 times over. It pays for itself 14 times over if they save themselves from being towed. We have a marketing plan in place with a focus on prepublication promotion, extensive ARC distribution for obtaining reviews, online promotion, publicity to include TV and radio satellite interviews, scheduling speaking engagements and targeting places that car enthusiasts shop including auto parts stores, AAA, rental car outlets as well as trucking and moving companies.
