**Scientific Advances in STEM** Yadir Torres,Manuel Félix,Ana M Beltrán,2021-09-10 This book collects the publications of the special Topic Scientific advances in STEM: from Professor to students. The aim is to contribute to the advancement of the Science and Engineering fields and their impact on the industrial sector, which requires a multidisciplinary approach. University generates and transmits knowledge to serve society. Social demands continuously evolve, mainly because of cultural, scientific, and technological development. Researchers must contextualize the subjects they investigate to their application to the local industry and community organizations, frequently using a multidisciplinary point of view, to enhance the progress in a wide variety of fields (aeronautics, automotive, biomedical, electrical and renewable energy, communications, environmental, electronic components, etc.). Most investigations in the fields of science and engineering require the work of multidisciplinary teams,

representing a stockpile of research projects in different stages (final year projects, master's or doctoral studies). In this context, this Topic offers a framework for integrating interdisciplinary research, drawing together experimental and theoretical contributions in a wide variety of fields.

Contrast-Enhanced Ultrasound in Pediatric Imaging Paul S. Sidhu,Maria E. Sellars,Annamaria Deganello,2020-09-02 This book is a comprehensive guide to the rapidly evolving field of contrast-enhanced ultrasound (CEUS) in the child. The uses and interpretation of CEUS are clearly explained with the aid of numerous illustrations. The coverage encompasses both established indications, such as focal liver lesions, abdominal solid organ injury, and vesicoureteral reflux, and a range of newer applications. Extensive information is also provided on microbubble agents and their use in the pediatric age group, as well as on practical aspects of setting up a CEUS service for children. CEUS is a safe imaging method that is ideal for the young patient and can be used for problem solving in a number of clinical situations. Ultrasound combined with microbubble contrast avoids the ionizing radiation of a CT examination, the use of iodinated contrast, the need for sedation or a general anesthetic, and the complexities of MR imaging. In bringing readers up to date with

best practice and the latest innovations in CEUS, this book will be of value for pediatric radiologists, pediatric sonographers/technicians, and pediatricians.

### **Iran's Foreign Policy in the South Caucasus** Marzieh

Kouhi-Esfahani,2019-01-10 Iran's role as a regional power is more significant than many in the West may realise. The country lies between Central Asia/the Caucasus and the Gulf region on the one hand, and, on the other, between the Mediterranean/Levant region and South Asia. Many of these areas are of increasing strategic importance. This book explores Iran's role as a regional power, focusing on relations with South Caucasus countries - Azerbaijan and Armenia. It outlines the historical context, including Persia's rule of these countries before the nineteenth century, and discusses Iran's approach to foreign and regional policy and how both internal and international factors shape these policies. The book assesses Iran-Azerbaijan and Iran-Armenia bilateral relations to demonstrate how those policies translate in Iran's regional and bilateral relations. The book concludes by considering how Iran's relations in the region are likely to develop in the future.

**Very High Resolution (VHR) Satellite Imagery** Francisco Eugenio,Javier Marcello,2019-11-06 Recently, growing interest in the use of remote sensing imagery has appeared to provide synoptic maps of water quality parameters in coastal and inner water ecosystems; monitoring of complex land ecosystems for biodiversity conservation; precision agriculture for the management of soils, crops, and pests; urban planning; disaster monitoring, etc. However, for these maps to achieve their full potential, it is important to engage in periodic monitoring and analysis of multi-temporal changes. In this context, very high resolution (VHR) satellite-based optical, infrared, and radar imaging instruments provide reliable information to implement spatially-based conservation actions. Moreover, they enable observations of parameters of our environment at greater broader spatial and finer temporal scales than those allowed through field observation alone. In this sense, recent very high resolution satellite technologies and image processing algorithms present the opportunity to develop quantitative techniques that have the potential to improve upon traditional techniques in terms of cost, mapping fidelity, and objectivity. Typical applications include multi-temporal classification, recognition and tracking of specific patterns, multisensor data fusion, analysis of land/marine ecosystem processes and environment monitoring, etc. This book aims to collect new developments, methodologies, and applications of very high resolution satellite data for remote sensing. The works selected provide to the research community the most recent advances on all aspects of VHR satellite remote sensing.

*Sharing Poetic Expressions* Anna-Teresa

Tymieniecka,2011-05-03 A world ever more extensively interlinked is calling out for serving human interests broader and more compelling than those inspiring our technological welfare. The interface between cultures – at the moment especially between the Occident and Islam – presents challenges to mutual understandings and calls for restoring the resources of our human beings forgotten in the struggle of competition and rivalry at the vital spheres of existence. In the evolutionary progress of the living beings the strictly vital concerns, emotions, attributes become sublimed and elevated to the spiritual sphere at which human beings encounter each other and share. Studies presented here bring forth sublimity, generosity, forgiveness, beauty, and are exalting the quest after ciphers and symbols which lead to our sharing the common deepest stream of fraternal reality.

**Partial Connections** Marilyn Strathern,2005-03-22 Updated

with a new Preface, this seminal work challenges the routine ways in which anthropologists have thought about the complexity and quantity of their materials. Marilyn Strathern focuses on a problem normally regarded as commonplace; that of scale and proportion. She combines a wide-ranging interest in current theoretical issues

with close attention to the cultural details of social life, attempting to establish proportionality between them. Strathern gives equal weight to two areas of contemporary debate: The difficulties inherent in anthropologically representing complex societies, and the future of cross-cultural comparison in a field where 'too much' seems known. The ethnographic focus of this book emphasizes the context through which Melanesianists have managed the complexity of their own accounts, while at the same time unfolding a commentary on perception and the mixing of indigenous forms. Revealing unexpected replications in modes of thought and in the presentation of ambiguous images, Strathern has fashioned a unique contribution to the anthropological corpus. This book was originally published under the sponsorship of the Association for Social Anthropology in Oceania.
