Pediatric Evaluation of Disability Inventory (PEDI) Stephen M. Haley, 1992 A comprehensive clinical assessment instrument that samples key functional capabilities and performance in children

Barkley Functional Impairment Scale--Children and Adolescents (BFIS-CA) Russell A. Barkley, 2012-05-09 To diagnose a mental disorder or make a disability determination, clinicians must assess functional impairment--not just the presence of symptoms. Meeting a key need, the Barkley Functional Impairment Scale--Children and Adolescents (BFIS-CA) is an empirically based, norm-referenced tool that exceeds other available scales in its comprehensive coverage of domains of psychosocial impairment. The BFIS-CA is designed to obtain parent reports on possible impairment in 15 different domains of everyday activities for children and teens. The scale typically takes a parent 5-7 minutes to complete. Also included is a follow-up parent interview form for obtaining more information about specific problem areas. Complete instructions for scoring and interpreting the scale are provided. Age range: 6-17. See also the Barkley Deficits in Executive Functioning Scale--Children and Adolescents (BDEFS-CA), which assesses clinically significant executive functioning difficulties. Includes Permission to Photocopy Enhancing the convenience and value of the BFIS-CA, the limited photocopy license allows purchasers to reproduce the forms and score sheets and yields considerable cost savings over other available scales. The large format and sturdy wire

binding facilitate photocopying.

When Children Die Institute of Medicine, Board on Health Sciences Policy, Committee on Palliative and End-of-Life Care for Children and Their Families, 2003-02-09 The death of a child is a special sorrow. No matter the circumstances, a child's death is a life-altering experience. Except for the child who dies suddenly and without forewarning, physicians, nurses, and other medical personnel usually play a central role in the lives of children who die and their families. At best, these professionals will exemplify medicine with a heart. At worst, families' encounters with the health care system will leave them with enduring painful memories, anger, and regrets. *When Children Die* examines what we know about the needs of these children and their families, the extent to which such needs are—and are not—being met, and what can be done to provide more competent, compassionate, and consistent care. The book offers recommendations for involving child patients in treatment decisions, communicating with parents, strengthening the organization and delivery of services, developing support programs for bereaved families, improving public and private insurance, training health

professionals, and more. It argues that taking these steps will improve the care of children who survive as well as those who do not—and will likewise help all families who suffer with their seriously ill or injured child. Featuring illustrative case histories, the book discusses patterns of childhood death and explores the basic elements of physical, emotional, spiritual, and practical care for children and families experiencing a child's life-threatening illness or injury.
